45 River Road  
45 River Road  
Edgewater, NJ 07020  
Nova Project No.: B22-6516  
Fannie Mae Deal ID: TBD**

In accordance with our agreement, Nova Group, GBC (Nova) has performed a Phase I Environmental Site Assessment (ESA) of the above referenced property in accordance with ASTM E 1527-13 and, the Fannie Mae DUS Guide. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess the Property, as described herein. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR, Part 312.

We certify that we have no undisclosed interest in the Property, and that our employment and compensation are not contingent upon our findings and opinions. The scope of this assessment, methodology, limiting conditions, and reliance language are outlined within this report.

Respectfully submitted,

**NOVA GROUP, GBC**

## EXECUTIVE SUMMARY

Nova was authorized by Greystone Servicing Company, LLC to conduct a Phase I Environmental Site Assessment (ESA) of the 45 River Road property located at 45 River Road, Edgewater, NJ ("the Property"). Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and the Fannie Mae DUS Guide. There are no exceptions to, or deletions from the ASTM E 1527-2013 standard practice and authorized Scope of Services, unless otherwise stated herein.

On 06/22/2022, Anthony J. Galasso, representing Nova, conducted a Property reconnaissance to assess the possible presence of recognized environmental conditions (RECs) and non-ASTM environmental issues, as prescribed by the scope of work, at the Property. Nova's assessment included review of ASTM-defined sources of historical information, reconnaissance of adjoining properties, background research, and review of available local, state, and federal regulatory records.

General Property Information					
Parcel Information	Comprised of 1 rectangular-shaped parcel of land that is approximately 0.3 acres in size.				
Current Use	Multi-family apartment complex			Number of Units	77
Number of Residential Buildings	1	No. of Stories	6	Date(s) of Construction	2021
Regulatory Database Listings for the Property (Refer to the Regulatory Section)					Yes

During the vicinity reconnaissance, Nova observed the following land use on properties in the immediate vicinity of the Property.

Current Use of Adjoining Properties		
Relative Location	Description	Adjacent Property Concern
North	A four-level parking garage (75 River Road) is located to the north of the Property, beyond which is Pembroke Place.	No*
East	Somerset Lane is located to the east of the Property, beyond which is the Pearl condominium complex (9 Somerset Lane).	
South	Pembroke Place is located to the south of the Property, beyond which is Spencer Savings Bank (2 Pembroke Place).	
West	Courtyard by Marriott Edgewater (3 Pembroke Place) is located to the west of the Property, beyond which is Pembroke Place.	
*Current uses of adjoining land, if any, that have been identified as a potential concern is discussed below or within the State and Federal Regulatory Section.		

## Conclusions and Recommendations

Nova has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 45 River Road, Edgewater, NJ, the Property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

Conclusion(s)	Recommendation(s)
<p>The known presence of known contaminated historic fill and groundwater at the Property constitutes a REC. However, groundwater at the Property is not used for potable purposes and concentrations of VOCs, SVOCs, and metals detected in groundwater at the Property do not currently present a vapor intrusion concern at the Property as evidenced by the recent vapor intrusion compliance conducted at the Property by Arcadis. Furthermore, the Property building is equipped with a vapor protection barrier and passive vapor depressurization system with the ability to equip an active vapor depressurization system if so desired. Finally, the Property is capped with asphalt, concrete, landscaping/hardscaping, and a slab-on-grade structure thereby preventing direct human contact with the underlying historic fill material.</p>	<p>Nova recommends that the LSRP adhere to the updated compliance timeline as stipulated by the NJDEP and the USEPA to establish the groundwater monitoring network and monitored natural attenuation program, as well as the establishment of required institutional controls for soil and groundwater.</p>

Environmental issues with regard to Non-Scope Considerations (NSCs) or Business Environmental Risks (BERs), if any, identified in connection with the Property at the time of the Property assessment are detailed below.

NSC / BER	Concern	Finding	Recommendation
PCB	No	None	None
ACM	No	None	None
LBP	No	None	None
Radon	No	None	None
Mold	No	None	None
Lead in Drinking Water	No	None	None
Air Quality or Vapor Intrusion	No	None	None
Hazardous Substances or Petroleum Products	No	None	None
AST, UST, or LUST Concern at the Property	No	None	None
Other / Additional BERs	None		None

## 1.0 INTRODUCTION

Nova was authorized by Greystone Servicing Company, LLC, to conduct a Phase I Environmental Site Assessment (ESA) of 45 River Road located at 45 River Road, Edgewater, NJ ("the Property"). Nova has conducted this ESA in general accordance with the scope and limitations of American Society for Testing and Materials (ASTM) Designation E1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and the Fannie Mae DUS Guide. There are no exceptions to, or deletions from the ASTM E 1527-2013 standard practice and authorized Scope of Services, unless otherwise stated herein.

On 06/22/2022, Anthony J. Galasso, representing Nova, conducted a Property reconnaissance to assess the possible presence of recognized environmental conditions (RECs) and non-ASTM environmental issues, as prescribed by the scope of work, at the Property. Nova's assessment included review of ASTM-defined sources of historical information, reconnaissance of adjoining properties, background research, and review of available local, state, and federal regulatory records.

Nova contracted Environmental Risk Information Services (ERIS), to perform a computer database search for local, state, and federal regulatory records pertaining to environmental concerns for the Property and facilities in the vicinity of the Property.

### 1.1 Purpose

The purpose of this Phase I ESA is to identify RECs in connection with the Property. As defined by ASTM E1527-13, a REC is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment, and includes controlled recognized environmental conditions (CREC). A CREC is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, Property use restrictions, activity and use limitations, institutional controls, or engineering controls). *De minimis* conditions are not RECs.

This Phase I ESA may also identify historical recognized environmental conditions (HREC). A HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls.

### 1.2 Scope of Services

Nova's Scope of Services for this Phase I ESA conforms with the due diligence standards detailed in ASTM E1527-13 and the Fannie Mae DUS Guide. Services provided for this project included:

- ▶ A records review of standard federal, state, tribal and local record sources, as well as physical setting sources;
- ▶ A review of standard historical resources regarding historical land use activities at the Property;
- ▶ Interviews with people that have knowledge regarding the past or present uses of the Property, including present and past owners, operators, and occupants of the Property, as well as with local government officials, where feasible;
- ▶ A reconnaissance of the Property to visually and physically observe the Property for evidence of RECs; and
- ▶ Review of previous environmental reports, if available.

Copies of resumes of Nova staff involved in the preparation of this report are included in the Appendix.

Nova investigated the Property for certain Non-Scope Considerations (NSCs) and/or Business Environmental Risks (BERs) that are not considered in the CERCLA definition of hazardous substances (42 USC § 9601.14) nor specifically required per ASTM E1527-13. A discussion of NSCs/BERs is found within the NSCs/BERs section of this report. This assessment does not include sampling or testing of materials (i.e. building, radon, soil, water, or air). An evaluation for vapor intrusion or encroachment condition to exist at the Property was evaluated.

### 1.3 Significant Assumptions

There is a possibility that even with the proper application of these methodologies there may exist on the Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Nova believes that the information obtained from the record review and the interviews concerning the Property is reliable. However, Nova cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete.

### 1.4 Limitations and Exceptions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in the ASTM E1527-13 and the Fannie Mae DUS Guide. Nova was not requested to limit or deviate from the ASTM E1527-13 or the Fannie Mae DUS Guide during the conduct of this assessment. The following limiting condition(s), deletion(s), deviation(s), and/or data failure(s)/data gap(s) as listed, if any, are not critical and do not alter the conclusions or recommendations of this assessment unless otherwise stated.

#### 1.4.1 Limiting Conditions

Limiting Conditions include physical obstructions such as adjacent buildings, bodies of water, asphalt/concrete, or other paved surface areas, as well as other physical constraints including rain or snow, observed at the time of the assessment.

- ▶ No significant inaccessible areas, limitations or physical obstructions/constraints were encountered during the Property reconnaissance.

## 1.4.2 Data Gaps

A data gap, as defined in ASTM E1527-13, is the *“lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.”*

- ▶ Data gaps in excess of the recommended five-year interval were encountered. However, based on the available information reviewed, this data failure is not considered to be a significant data gap and is not expected to alter the conclusions or recommendations of this assessment.
- ▶ Nova encountered a data gap by not interviewing past Property owners, or adjoining property owners, as none were available for comment, did not respond to requests for information, or did not exist. However, based on our review of the available municipal, regulatory, and historical information, the absence of information obtained from interviews with these individuals is not considered significant to the findings, conclusions, or recommendations of this assessment.
- ▶ The Edgewater Building Department, Edgewater Fire Department, and the Bergen County Environmental Health Division were unresponsive to information requests. Based on our review of the available municipal, regulatory, and historical information, the absence of information obtained from interviews with referenced agencies is not considered significant to the findings, conclusions, or recommendations of this assessment. Should information be received from referenced agencies that alter the findings of this ESA, an addendum to this report will be provided under separate cover.

## 1.5 Special Terms and Conditions

Authorization to perform this work was given by a directive from Greystone Servicing Company, LLC.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical analyses have been performed during the course of this ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

The content and conclusions provided by Nova in this report are based solely on the information collected during our investigation and activities at the Property, our present understanding of the Property conditions, and our professional judgment in light of such information at the time this report was prepared. Part of the findings in this investigation is based on data provided by others. This report presents Nova’s professional opinion, and no warranty, expressed or implied, is made.

## 1.6 User Reliance

This report is addressed to Greystone Servicing Company, LLC, such other persons and/or entities as may be designated by Greystone Servicing Company, LLC, and their respective successors and assigns (collectively "the Client") and Fannie Mae and their successors and assigns.

Nova acknowledges and agrees that (i) the report may be relied upon by Fannie Mae, Greystone Servicing Company, LLC, ("Lender") and/or their subsidiaries, affiliates, successors and/or assigns, in determining whether to make a loan evidenced by a note secured by the Property (the "Mortgage Loan"), (ii) the Report may be relied upon by (a) any purchaser or investor in determining whether to purchase the Mortgage Loan or any interest in the Mortgage Loan from Greystone Servicing Company, LLC and or any securities representing an interest in the Mortgage Loan and (b) any rating agency rating securities representing an interest in the Mortgage Loan, (iii) the report may be referred to in and included with materials offering for sale the Mortgage Loan or an interest in the Mortgage Loan or such securities, (iv) persons who acquire the Mortgage Loan or an interest in the Mortgage Loan or such securities may rely on the report, and (v) the report speaks only as of its date in the absence of a specific written update of the report signed and delivered by Nova.

## 2.0 PROPERTY DESCRIPTION

### 2.1 User Provided Information

Pursuant to ASTM E1527-13, Nova requested the following Property information from Greystone Servicing Company, LLC (the "User" of this report) and from the Key Site Manager (KSM). Information provided by the User (if any) or the KSM is included in various sections of this report.

User Provided Information		
Item	Not Provided by User	Provided by User
Environmental Pre-survey Questionnaire	✓	
Title Records	✓	
Environmental Cleanup Liens or AULs (40 CFR 312.25 and 40 CFR 312.26(a)(1)(v) and vi))	✓	
Specialized Knowledge (40 CFR 312.28)	✓	
Valuation Reduction for Environmental Issues (40 CFR 312.29)	✓	
Identification of Key Site Manager		✓
Reason for Performing Phase I ESA		✓
Prior Environmental Reports	✓	
Other	✓	

Joseph Daibez, Property Owner, was provided with a copy of a Nova pre-survey questionnaire. As of the date of this report, a completed questionnaire was not returned to Nova; however, during the Property reconnaissance and interviews with Property ownership, Joseph Daibez stated that he was not aware of environmental liens, activity use limitations, or a reduction in Property value due to environmental issues.

### 2.2 Location and Legal Description

A summary of Property details is provided in the following table. A topographic map as well as figures are included in the Appendices.

Location and Legal Description		
Property Location	45 River Road Edgewater, Bergen County, NJ 07020	
Ingress and Egress	Vehicle access from a driveway off Somerset Lane to the east.	
APN(s)	Block 99, Lot 1.19	
Historical/Listed Property Address(es)	8 Somerset Lane	
Acreage	0.3	
Abbreviated Legal Description	Not available via publicly ascertainable resources.	
Current Owner / Date of Acquisition	45 River Road Associates, LLC	No. of Years of Property Ownership: 7
Survey Map / Alta Survey	A survey/plat map depicting current and/or future Property features/development was not provided.	

## 2.3 Property and Vicinity General Characteristics

Nearby land use in the vicinity of the Property as well as the general setting of the Property is described below.

Property and Vicinity General Characteristics	
General Surrounding Area Use	Combined mixed use residential / commercial
Zoning Information	SWR (Southern Waterfront Redevelopment Zone)
On-Property Parking Facilities	Asphalt-paved surface parking is located within the northern, western and southern portions of the Property.
Landscaping	Grass and landscaping are located along Property and building perimeters.
Geologic and Hydrogeologic Conditions	No apparent routes of direct discharge that have the potential of facilitating the migration of hazardous substances or petroleum products that are likely to migrate to or from the Property, or from nearby/adjoining property were observed; however, the location of the Property within a "high flood risk" area has the potential of facilitating the migration of contaminants onto the Property from off-Property sources, during flooding events (if any). Evidence of spills or releases (either current or historical) was not observed during the performance of the inspection. Water bodies were not observed within the limits of the Property and/or in close proximity.

## 2.4 Current Property Use

The Property is currently designed and used as a multi-family residential apartment complex under the name 45 River Road, which contains a management reported total of 76 apartment units within 1, 6-story residential building. The Property is occupied exclusively by residential tenants with the exception of a law office on the ground floor.

## 2.5 Description of Property Improvements

The following table summarizes Property improvements based on interview information and review of publicly ascertainable sources, as well as observations made during the reconnaissance of the Property. Interior finishes of the Property building(s), if any, and information regarding extensive renovations, as applicable, are detailed within the Property Reconnaissance section.

Summary of Property Improvements						
Building Name	No. of Stories	Sub-Levels	Construction Date	Foundation	Exterior	Roof
45 River Road	6	None	2021	Reinforced Concrete	Brick masonry and EIFS	Ethylene propylene diene monomer (EPDM) membrane (flat)

### 2.5.1 Services and Utilities

The following municipal services and utilities are provided to the Property and/or the surrounding area.

Utilities	
Item	Description
Potable Water Supply	Provided and maintained by Veolia.
Sewage Disposal System	Provided and maintained by the Bergen County Utilities Authority (BCUA). Indication of a Property septic system or cesspool was not observed at the Property during the reconnaissance and/or review of publicly available resources.
Storm Water	Discharged to the BCUA stormwater system via underground conduits from surface drains located throughout the Property parking surfaces.
Electricity / Natural Gas	Public Service Electric & Gas / Public Service Electric & Gas
Heating/Cooling Systems	Heating and cooling are provided by individual air handling units.
Domestic Water Heaters	Central gas-fired hot water heaters are located in the basement.

## 2.6 Current Use of Adjoining Property

During the vicinity reconnaissance, Nova observed the following land use on properties in the immediate vicinity of the Property.

Current Use of Adjoining Properties		
Relative Location	Description	Adjacent Property Concern
North	A four-level parking garage (75 River Road) is located to the north of the Property, beyond which is Pembroke Place.	No*
East	Somerset Lane is located to the east of the Property, beyond which is the Pearl condominium complex (9 Somerset Lane).	
South	Pembroke Place is located to the south of the Property, beyond which is Spencer Savings Bank (2 Pembroke Place).	
West	Courtyard by Marriott Edgewater (3 Pembroke Place) is located to the west of the Property, beyond which is Pembroke Place.	
*Current uses of adjoining land, if any, that have been identified as a potential concern is discussed below or within the State and Federal Regulatory Section.		

Based on investigation of current adjoining land use, the current use, treatment, storage, disposal or generation of hazardous substances or petroleum products was not observed. RECs were not identified based on the current uses of above-referenced adjoining properties.

## 3.0 RECORDS REVIEW

### 3.1 Standard Environmental Record Sources

#### 3.1.1 State and Federal Regulatory Review

Information from standard federal, state and tribal environmental record sources was provided through ERIS. Data from governmental agency lists are updated and integrated into one database, which is updated as data is released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables section within the database report. Any unmappables identified in the regulatory database are discussed below in the appropriate sections.

##### 3.1.1.1 Regulatory Report Summary

The following is a summary of facilities identified/present in the standard/additional database sources within the ASTM prescribed Approximate Minimum Search Distance (AMSD). Refer to the Regulatory Records Appendix for a complete listing.

#### Regulatory Report Summary

Database	Search Radius	Target Property	Within 0.12mi	0.12mi to 0.25mi	0.25mi to 0.50mi	0.50mi to 1.00mi	Total

### 3.1.1.2 On-Property Regulatory Database Summary

Following review of standard/additional database sources, the following listings (if any) have been identified for the Property.

Database(s)	Facility Name (address)	Discussion
FINDS / FRS (2), ICIS (2), ALL SITES (8), NJEMS	Unilever Research US / Unilever Research Company / Mystic Carriers / National Resources / Paul Philips of First Hartford / 45 River Road)	<b>Program:</b> National Pollutant Discharge Elimination System (NPDES) x 3, Hazardous Waste Program, AIRS Program, Coastal Zone Management x 3, State Cleanup Site, Laboratory Certification, Refuse Disposal, Emergency Planning and Community Right-to-Know Act (EPRCA), Remediation Funding Source, Resource Conservation and Recovery Act (RCRA), Toxic Substances Act, National Compliance Database, Biennial Reports <b>Status:</b> Inactive

Database(s)	Facility Name (address)	Discussion
MLTS, HIST MLTS, ALL SITES	Conopco Inc (45 River Road)	<b>Program:</b> Pollution Right to Know Act, Permitting, Compliance and Enforcement Tracking System (TEMPO) <b>Status:</b> Inactive This was a subsidiary of Unilever and was listed as a storage facility of radiological material.
PRP	Lever Brothers Inc (45 River Road)	This listing was for a facility located in Edison Township, NJ. It is likely the 45 River Road facility was also utilized as a mailing address for corporate operations.
NJEMS, ALL SITES (3)	iPark Edgewater (45 River Road)	<b>Program:</b> New Jersey Environmental Management System (NJEMS), RCRA, NPDES, Coastal and Land Use <b>Status:</b> Active <b>Description:</b> No violations were identified.
FINDS / FRS	EFS Structures (45 River Road)	<b>Program:</b> OSHA <b>Status:</b> Inactive <b>Description:</b> No violations were identified.
HIS SPILL (x9), SPILLS (x8)	45 River Road	All of the SPILLS with the exception of one were determined to be de minimis releases, and according, not considered to be RECs in connection with the Property at this time. Of note, Incident ID: 360548 was absorbed into the Brownfields and SHWS listings.
BROWNFIELDS, DSHW, SHWS, VCP, MAJ FAC, SITE REMEDIATION, HIST FILL	Unilever Research & Development US, Inc.- Edgewater Lab AKA Mystic Bulk Carriers (45 River Road)	According to the New Jersey's Online Searchable Database for Brownfields properties, remediation is currently in progress. The Property was originally assigned to the Brownfields program on March 3, 2003. The remedial level was determined to be C3: Multi-Phase RA - Unknown or Uncontrolled Discharge to Soil or GW on August 26, 2003. Mystic Bulk Carrier was identified on the DSHW database as of November 25, 2013. Unilever was identified on the SHWS and VCP databases as of February 6, 2012. The SHWS listing indicates the Property is listed as an "Active Sites with Confirmed Contamination." Two Site Remediation cases (PI 572153 and 015891) were also identified. See discussion for further information.
RCRA-LQG, ALLSITES, RCRA-TSD, RCRA CORRACTS	iPark Edgewater LLC (45 River Road)	<b>Wastes:</b> Hexachlorophene, dichloromethyl ether, methane, U013, dimethoate, barban, carbamic acid, benzenenamine, spent halogenated solvents, and similar solvent waste codes. <b>Violations:</b> TSD - Manifest / Records / Reporting, TSD - General, TSD - Financial Requirements, TSD - Closure / Post-Closure, Generators - General <b>Regulation Violated/Enforcement Action:</b> Written Informal, Initial Compliance Order, Final Compliance Order <b>Date of Compliance:</b> April 2, 1987, June 12, 1987, August 30, 1985, January 6, 1988, June 29, 1995, April 2, 1987 A sitewide RFA was complete on December 27, 1989. This facility was listed as a CA - Prioritization - Low CA Priority on April 28, 1995. As of September 26, 2013, a human exposures controlled determination was issued. See discussion for further information.
CERCLIS, CERCLIS-NFRAP, SEMS ARCHIVE	Lever Brothers Inc (45 River Road)	<b>Discovery Date:</b> April 10, 1984 <b>Archive Date:</b> September 19, 1985 <b>NPL Status:</b> Not on the NPL <b>Description:</b> A preliminary assessment was conducted at the Property in September 1984. site investigation was conducted between August 15, 1985 and September 19, 1985. This case was granted a No Further Remedial Action Planned designation (NFRAP) on September 19, 1985. Cleanup activities were conducted at the Property with the oversight of the State.
UST	Unilever Research & Development Inc (45 River Road)	This facility historically utilized an unknown UST, which was terminated on November 16, 2000. No additional information was provided. Based on the excavation depths of footers associated with the construction of the Property building, it is unlikely that a UST currently exists as the Property. As such, this former UST is not expected to represent a REC in connection with the Property at this time.

The following is a detailed summary of regulatory database listings for the Property that require additional discussion. Based on regulatory status, remaining above-referenced listings are not considered RECs in connection with the Property.

- **Historic SPILLS / SPILLS** The Property, under the address of 45 River Road, is listed as a Historic SPILLS and SPILLS facility. The spill listings are briefly summarized below:

- Case Number: 89-11-21-1552 - An unknown quantity of oil fuel #6 was released due to an equipment failure / user error. The release was terminated and OEM oversaw clean up.
- Case Number: 92-12-31-0842-50 - An small amount of fuel oil was released on November 30, 1992 due to sloppy housekeeping. The spill was contained to the concrete and no cleanup was required.
- Case Number: 92-4-23-1301-13 - An unknown amount of water-based paint was released on April 23, 1992 and flowed into a storm drain connected to the Hudson River. The release was terminated and OEM oversaw clean up.
- Case Number: 92-10-9-1022-48 - An oil slick approximately 50 yards wide was identified on the adjacent Hudson River on October 9, 1992. The release was terminated and conducted monitoring.
- Case Number: 95-10-27-1556-34 - A solid waste release was reported on October 27, 1995. It was reported that the restoration of old barges in the vicinity was not being properly contained. DSWM and NJSP / OEM oversaw cleanup.
- Case Number: 97-10-1-1453-13 - An release of oil waste was reported on October 1, 1997. An oil sheen was reported to be coming from a seepage site at low tide. The NJSP / OEM and DFG oversaw cleanup activities.
- Case Number: 96-10-21-1604-39 - A release of total petroleum hydrocarbons (TPH) was reported on September 1, 1996. The NJDPDES permit allowed TPH to be present in the outfall at concentrations of 10 parts per million. Sampling indicated 77 ppm, which constituted a violation.
- Case Number: 96-9-30-1520-11 - An release of approximately 3-5 gallons of hydraulic oil was reported on September 30, 1996. A pipeline was being pressure tested at the facility and a leak was discovered. Cleanup was conducted by a contractor.
- Case Number: 99-10-29-1728-06 - An incident was reported on October 22, 1999. An individual reportedly absorbed 15 microcuries of Carbon 14. No material release was reported.
- Incident ID: 116738 - A SPILLS case was opened on September 7, 2004 due to a release of wastewater lead. Due to a malfunction wastewater pre-treatment plant, this occurred for approximately 90 minutes. The spill was terminated.
- Incident ID: 545926- A SPILLS case was opened on January 26, 2015 due to a request to dispose snow into the Hudson River. No impacts were reported.
- Incident ID: 586788- A SPILLS case was opened on January 22, 2016 due to a request to dispose snow into the Hudson River. No impacts were reported.
- Incident ID: 586848- A SPILLS case was opened on January 24, 2016 due to a request to dispose snow into the Hudson River. No impacts were reported.
- Incident ID: 587006- A SPILLS case was opened on January 25, 2016 due to a request to dispose snow into the Hudson River. No impacts were reported.
- Incident ID: 633224- A SPILLS case was opened on March 13, 2017 due to a request to dispose snow into the Hudson River. No impacts were reported.

- Incident ID: 360548- A SPILLS case was opened on March 10, 2020 due to the petroleum-impacted soils being identified.

Based on the relatively de minimis impacts reported in association with the SPILLS cases, none of these SPILLS cases are expected to represent a REC in connection with the Property at this time. Of note, Incident ID: 360548 was absorbed into the Brownfields and SHWS listings.

- According to available historical research, the Property was formerly developed with the Unilever (also known as Lever Brothers) Research and Development (R&D) facility circa 1959 until 2011. Operations at the Property included research and development of new products including perfumes and development of new production machinery. The R&D building was part of a much larger 47-acre industrial park that was in use since the 1900s and was occupied by Unilever from the 1930s until 2004. In 2004, iPark Edgewater LLC acquired the industrial park and began a piecemeal project of demolishing, remediating, and redeveloping portions of the industrial park. The R&D building was demolished in 2011.

Nova reviewed a Remedial Action Report, Remedial Action Areas 1, 2 and 5; I Park Edgewater 45 River Road, Edgewater, New Jersey ISRA Case # 20030062 and #E20040267 prepared for the New Jersey Department of Environmental Protection (NJDEP), Bureau of Industrial Site Remediation, Trenton, NJ on behalf of I Park Edgewater, LLC. by GZA GeoEnvironmental Inc. (GZA) of New York, New York in August 2011. According to the GZA report, the Property has been divided into six Remedial Action Areas (RAAs). The Property is in RAA-2, which is in the southern portion of the former industrial park. The RAR was prepared in accordance with the guidelines outlined in the NJDEP Technical Requirements for Site Remediation (N.J.A.C. 7:26E). The objective of the remedial action (RA) was reportedly to address both surficial and subsurface soils impacted by historic fill material, soft pitch (which impacts groundwater quality), and arsenic. The remedial actions selected to address subsurface impacts throughout the industrial park included the excavation of soils containing soft coal-tar derived pitch material; the excavation of soils with over 10 parts per million (ppm) of polychlorinated biphenyls (PCB); the excavation of soils characterized by concentrations greater than 600 ppm of arsenic; and the implementation of engineered and institutional controls (i.e., capping, deed notice, and a classification exception area).

Based on previous environmental investigations at RAA-2, only one VOC (benzene) had been detected in soils at concentrations above its NJDEP Impact to Groundwater Soil Cleanup Criterion (IGWSCC) near former buildings 2 and 3. Previous results indicated one area with polychlorinated biphenyls (PCBs) in soils above the NJDEP Non- Residential Direct Contact Soil Cleanup Criteria (NRDCSCC) of 2 parts per million (ppm) in the central portion of RAA-2 between Buildings 2 and 3. Polynuclear aromatic hydrocarbons (PAHs) associated with historic fill and soft pitch material were detected above NJDEP RDCSCC and IGWSCC in the majority of soil samples collected and analyzed at the Site. Naphthalene has been identified in soils in the central portion and eastern portions of RAA-2. Metals, including antimony, arsenic, beryllium, copper, lead, mercury, nickel, thallium, and zinc, were detected above the NJDEP RDCSCC and IGWSCC in the fill material throughout RAA-2. Of these, arsenic was the primary metal of concern due to its presence in groundwater at the Property and accounted for most of the regulatory standard exceedances.

To remediate areas of elevated contamination, three excavation areas (Excavation areas I-J, K, and L) were completed for RAA-2. The completed footprint for Excavations I-J was 2,701 square feet. Nine sidewall samples and three bottom samples were collected. The completed footprint for Excavation K was 932 square feet. Five sidewall samples and two bottom samples were collected. The completed footprint for Excavation L was 6,136 square feet. Seven sidewall samples and four bottom samples were collected. All samples were analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs); samples from Excavation J were also analyzed for PCBs. The analytical results from all the excavations had exceedances over the NJDEP RDSCC for SVOCs. There were no exceedances of the endpoints for VOCs except for the Excavation L location, which had VOC exceedances on the west wall. During the extension of this excavation to the east, soft pitch was observed along the east sidewall adjacent to the building. The excavation could not be advanced further due to potential for undermining the building. It is also noted that there were exceedances on the south wall too from the hard pitch located intermittently. During endpoint collection the sampler attempted to avoid the hard pitch, but it was not completely avoidable due to shards of hard pitch being intermittent within the soil strata. As per the remedial objective, hard pitch was to remain on site. The absence of soft roofing pitch material and the lack of VOC contaminants above applicable standards, except for one wall of excavation L, indicated that remedial objectives were met. Since the approved Remedial Action Work Plan (RAWP) called for the in-place management of hard pitch and HFM material, the presence of SVOCs above standards did not in itself indicate the need for further excavation. Sources of groundwater impacts at the Property were actively remediated by removing soft pitch, which was impacting groundwater, and monitored natural attenuation of impacted groundwater. Going forward, GZA proposed a groundwater monitoring program in conjunction with a Classification Exception Area (CEA) as an institutional control to eliminate the direct exposure to groundwater pathway. In addition, a groundwater cut-off wall proposed along the Hudson River would limit the discharge of impacted groundwater to sediment and surface water.

Nova interviewed David L. Thompson of Arcadis, Inc., the current Licensed Site Remediation Professional (LSRP) for the remediation project. According to Mr. Thompson, the groundwater cut-off wall and funnel & gate system were installed in 2018 along the Hudson River. The Property building (identified as Building M in RAA-2) was constructed with a vapor barrier and 4-inch PVC exhaust stacks serving as a passive vapor exhaust system with available outlets for connection to an extractor fan if an active system were to be installed in the future. Arcadis reportedly conducted a recent vapor intrusion compliance monitoring at the Property through the collection of sub-slab vapor samples and ground floor indoor air quality samples; all samples collected and analyzed were reportedly within current state and federal indoor air quality and vapor intrusion guidelines. Currently, Arcadis has received approval for the installation of an updated groundwater monitoring network to facilitate monitored natural attenuation of the groundwater throughout the entire site (including the Property) and will be updating a deed notice to include additional lots throughout the entire industrial park. Arcadis has recently been approved for an extension of the regulatory compliance date to May 6, 2024.

Based on the above, the presence of known contaminated historic fill and groundwater at the Property constitutes a REC. However, groundwater at the Property is not used for potable purposes and concentrations of VOCs, SVOCs, and metals detected in groundwater at the Property do not currently present a vapor intrusion concern at the Property as evidenced by the recent vapor intrusion compliance conducted at the Property by Arcadis. Furthermore, the Property building is equipped with a vapor protection barrier and passive vapor depressurization system with the ability to equip an active vapor depressurization system if so desired. Finally, the Property is capped with asphalt, concrete, landscaping/hardscaping, and a slab-on-grade structure thereby preventing direct human contact with the underlying historic fill material. Remediation of the Property has been completed and future monitoring of the Property is underway by an LSRP retained by the responsible party (iPark Edgewater LLC) under the oversight of the NJDEP and the USEPA. Nova, therefore, recommends that the LSRP adhere to the updated compliance timeline as stipulated by the NJDEP and the USEPA to establish the groundwater monitoring network and monitored natural attenuation program, as well as the establishment of required institutional controls for soil and groundwater.

### 3.1.1.3 Adjacent/Adjoining Facility Regulatory Database Summary

Following review of standard/additional database sources, the following facilities (if any) have been identified for the adjoining/adjacent properties.

Adjacent/Adjoining Facility Regulatory Database Summary				
Database	Facility Name (Address)	Direction/Location	Topo. Position	Discussion
ALLSITES, NJEMS	Courtyard by Marriott (3 Pembroke Place)	Adjoining west	Up-gradient	<b>Program:</b> NJEMS, Water Supply (Physical Connection) <b>Status:</b> Active <b>Description:</b> No violations were found in association with these listings.
SPILLS	9 Somerset Lane	Adjoining east	Down-gradient	<b>Release Date:</b> March 2, 2018 <b>SPILLS ID:</b> 668368 <b>Discussion:</b> A caller reported tar fumes from the local Superfund Site. The caller complained of dry eyes and vision issues. The release was atmospheric in nature and soils / groundwater were not impacted.
SPILLS	9 Somerset Lane	Adjoining east	Down-gradient	<b>Release Date:</b> June 6, 2018 <b>SPILLS ID:</b> 678487 <b>Discussion:</b> A caller reported a very strong oil odor in the area. The caller suspected it was coming from contaminated soil piles in the area. The case was investigated and no further action was required.

Adjacent/Adjoining Facility Regulatory Database Summary				
Database	Facility Name (Address)	Direction/Location	Topo. Position	Discussion
SPILLS	9 Somerset Lane	Adjoining east	Down-gradient	<b>Release Date:</b> June 6, 2018 <b>SPILLS ID:</b> 678487 <b>Discussion:</b> A caller reported a very strong oil odor in the area. The caller suspected it was coming from contaminated soil piles in the area. The case was investigated and no further action was required.
SPILLS	9 Somerset Lane	Adjoining east	Down-gradient	<b>Release Date:</b> March 27, 2018 <b>SPILLS ID:</b> 670512 <b>Discussion:</b> A caller reported a very strong oil odor in the area. The case was investigated and no further action was required.

The above-discussed facilities do not represent a REC to the Property. No other adjacent/adjoining facilities with the potential to impact the Property were identified on the federal, state, or tribal databases reviewed for this ESA.

### 3.1.1.4 Surrounding Area Facility Regulatory Database Summary

The following summarizes notable off-Property and non-adjacent facilities. Additional facilities listed within the prescribed AMSD that have been determined not to be pertinent (i.e. regulatory status, distance or topographic considerations) to this assessment are detailed within the regulatory database report included in the Appendix.

Notable Surrounding Area Facility Regulatory Database Summary				
Database	Facility Name (address)	Distance/Location	Topo. Position	Discussion
NPL	Hudson River PCBs (No Address)	250 feet southeast	Down-gradient	The State has identified 40 "hot spots," defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. The EPA is currently overseeing clean up.

Notable Surrounding Area Facility Regulatory Database Summary				
Database	Facility Name (address)	Distance/Location	Topo. Position	Discussion
SPILLS (2), HIS SPILLS (11)	1 River Road	1,313 feet northeast	Cross-gradient	A total of 13 SPILLS incidents were reported at this facility. The majority of the SPILLS and HIS SPILLS cases involved smaller quantities of chemicals including chromium, hydrogen sulfide, cyanide, arsenic acid solution and mercury liquids. The largest release involved 100 gallons of waste oil. Though each release was cleaned up, the numerous releases incident were encompassed under the other regulatory listings.
CERCLIS, FED ENG, FED INST, NOL	Quanta Resources (One River Road)	1,313 feet northeast	Cross-gradient	<p><b>Discovery Date:</b> June 1, 1981</p> <p><b>NPL Status:</b> Not on the Final NPL</p> <p><b>Description:</b> Several investigations including removal investigations, feasibility studies, and remedial design were conducted at this facility. A Record of Decision was issued on September 29, 2011. Engineering controls included a permeable reactive barrier, GW monitoring, sealing of the foundation, off-site removal of free-phase NAPL, stabilization of free-phase NAPL, free product recovery, soil gas monitoring, SSDS, and an engineered cap. Institutional controls were implemented for soil gas, groundwater, free-phase NAPL, and soil. See discussion for further information.</p>

Notable Surrounding Area Facility Regulatory Database Summary				
Database	Facility Name (address)	Distance/Location	Topo. Position	Discussion
BROWNFIELDS, SHWS, VCP, SITE REMEDIATION, DEED	Celotex Park (1 River Road)	1,313 feet northeast	Cross-gradient	<p>According to the New Jersey's Online Searchable Database for Brownfields properties, remediation is currently in progress. The Property was originally assigned to the Brownfields program on June 21, 2002. The remedial level was determined to be C3: Multi-Phase RA - Unknown or Uncontrolled Discharge to Soil or GW on June 21, 2002. This facility was identified on the SHWS and VCP databases as of July 20, 2013 The SHWS listing indicates the Property is listed as an "Active Sites with Confirmed Contamination." Two Site Remediation cases (PI 576638 and G000005992) were also identified.</p>
RCRA NonGen, RCRA-TSD, RCRA CORRACTS, NJEMS, ALL SITES (2)	All County Environmental Services Corp (1 River Road)	1,313 feet northeast	Cross-gradient	<p><b>Wastes:</b> Industrial solvent waste  <b>Violations:</b> TSD - General, TSD - Manifest / Records / Reporting  <b>Regulation Violated/ Enforcement Action:</b> Written Informal, Initial Compliance Order, Final Compliance Order  <b>Date of Compliance:</b> December 29, 1985, September 26, 1985, August 6, 1985, February 13, 1986, August 17, 1984            This facility was listed as a CA - Prioritization - Low CA Priority on April 28, 1995. As of August 26, 2010, human exposures and the release to GW were determined to be controlled.</p>
CERCLIS, CERCLIS-NFRAP, SEMS ARCHIVE	Allied Corp (1 River Road)	1,313 feet northeast	Cross-gradient	<p><b>Discovery Date:</b> June 1, 1981  <b>Archive Date:</b> May 31, 1985  <b>NPL Status:</b> Not on the NPL  <b>Description:</b> A preliminary assessment was conducted at the Property from May 1, 1985 through May 31, 1985, at which time the facility was granted a No Further Remedial Action Planned (NFRAP) designation.</p>

Notable Surrounding Area Facility Regulatory Database Summary				
Database	Facility Name (address)	Distance/Location	Topo. Position	Discussion
CERCLIS, CERCLIS-NFRAP, SEMS ARCHIVE, ALL SITES	Signo Delta Warehouse (1 River Road)	1,313 feet northeast	Cross-gradient	<p><b>Discovery Date:</b> March 20, 1987</p> <p><b>Archive Date:</b> January 23, 1996</p> <p><b>NPL Status:</b> Not on the NPL</p> <p><b>Description:</b> A removal assessment was conducted at the Property from June 4, 1986 through February 23, 1987. A site inspection and preliminary assessment was conducted in May 1987 and August / September 1987, respectively. This facility was archived via a No Further Remedial Action Planned (NFRAP) designation on January 23, 1996.</p>
RCRA NonGen, ALL SITES, ISRA	Lustrelon Inc (1 River Road)	1,313 feet northeast	Cross-gradient	<p><b>Wastes:</b> Unspecified hazardous waste</p> <p><b>Violations:</b> Generators - General, LDR - General</p> <p><b>Regulation Violated/ Enforcement</b></p> <p><b>Action:</b> Written informal</p> <p><b>Date of Compliance:</b> November 14, 1987; March 9, 1989</p> <p>This facility was assigned to ISRA (G000002776) due to a business sale / bankruptcy / cessation on February 11, 1992.</p>
RCRA NonGen, ALL SITES, NJEMS	J&T Leasing (1 River Road)	1,313 feet northeast	Cross-gradient	<p><b>Wastes:</b> Unspecified hazardous waste</p> <p><b>Violations:</b> None</p> <p><b>EPA ID:</b> NJD054054895</p> <p><b>Discussion:</b> This facility was formerly a LQG in 1981.</p>

The following is a detailed summary of regulatory database listings for facilities in the surrounding area that require additional discussion. Remaining above-referenced listings are not considered RECs in connection with the Property based on regulatory status, relative distance from the Property or topographic considerations.

- > Various Entities (1 River Road). According to a summary of this facility from the U.S. EPA, the Quanta Resources Corporation site was a location where various companies manufactured coal tar, paving, and roofing materials starting in the late 1800s. Quanta Resources operated an oil processing facility at the site from 1974 to 1981. The NJDEP closed the Quanta Resources facility in 1981 after it discovered large quantities of polychlorinated biphenyl (PCB)-laden oil in storage tanks. Quanta Resources operated a waste oil processing facility at the site from 1979 to 1981. The site housed 61 above-ground storage tanks with a total capacity of over 9 million gallons, an unknown number of underground storage tanks, and numerous underground pipes. Quanta stored oil, tar, asphalt, sludge, process water and other unknown liquids in the tanks. EPA placed the site on the Superfund program's National Priorities List in September 2002, after initial actions to address risks to human health and the environment and site investigations.

Under EPA oversight, Honeywell is addressing the site in two Operable Units (OUs). Operable Unit 1 (OU1) addresses the land and groundwater and Operable Unit 2 (OU2) addresses sediments and the nearby Hudson River. EPA directed and provided oversight between 1984 and 1988 of several cleanup actions performed by parties responsible for the contamination, called potentially responsible parties (PRPs). These parties removed approximately 1.35 million gallons of PCB-contaminated oil for off-site treatment. They also removed and recycled over 1.5 million gallons of coal tar from storage tanks, removed over 60 aboveground storage tanks, ten underground storage tanks and numerous underground pipes. EPA and Allied Signal, now Honeywell, a PRP and the successor to Barrett Manufacturing Company, entered a legal agreement called an Administrative Order on Consent (AOC) in 1996. The AOC required the responsible parties to improve site security, further investigate the extent of site problems, and develop further response actions for the site. EPA and Allied Signal signed a second AOC in 1998 designating steps to investigate and address ongoing coal tar sheens in the mudflats of the Hudson River in front of the site.

Honeywell started the cleanup at the site in May 2017 on the west side of River Road on the Block 93 parcel. In August 2017, the cleanup activities moved to the main Quanta site between River Road and the Hudson River. Honeywell temporarily suspended soil solidification work at the site in May 2018 to allow the owner of the land parcel of 115 River Road to demolish the onsite building. Though not a part of the cleanup action, removal of the building gave access to contaminated soil under the foundation. Honeywell resumed cleanup work at the site in early 2019. When work resumed at the site, Honeywell managed soil solidification under large tent structures to control potential releases of naphthalene vapors and odors. Carbon filtration units on the tent structures removed potential contaminants from the tented air before it was released to the environment. About ten percent of the soil solidification needed to be completed outside of a tent due to physical interferences with the tent structures. Honeywell completed ISS on the Quanta property and adjacent properties in May 2021.

In Operable Unit 1 (OU1) Honeywell used in-situ, or in place solidification and stabilization (ISS) to address zones of non-aqueous phase liquid (NAPL) coal tar and arsenic contamination. Other cleanup actions at the site include the installation of NAPL recovery wells to collect flowable NAPL product. Future cleanup actions include the capping of both the treated source areas and areas of residual contaminated soil. To clean up contaminated groundwater, an underwater reactive barrier will be installed during the Operable Unit 2 (OU2) cleanup to address contaminated sediments in the Hudson River. The barrier will function as a filter to remove contaminants from groundwater. Honeywell installed NAPL recovery wells in 2015. ISS of the NAPL zones on the main Quanta property started in the summer of 2017. The ISS of the Quanta property and adjacent properties was completed in 2021. Treatment of an area of high arsenic concentrations in groundwater is being evaluated under a separate schedule. Portions of the NAPL are under River Road, the main thoroughfare through Edgewater. Treatment of the NAPL beneath River Road will be coordinated with Bergen County, the owner of the road. Currently, there are deed restrictions and classification exception areas restricting development at the various parcels making up the site and restrictions on the use of groundwater at the site.

It is believed that contamination migrating from this site impacted soil and groundwater at the Property and required remediation. See Section 3.1.1.3 for further details.

### 3.1.1.5 Un-Plottable Facilities

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the "Unplottable" section within the database report. The following is a summary of unplottable facilities, if any, identified in the regulatory database and their potential to impact the Property. Facilities identified for the Property, adjoining land or surrounding area (with the potential to impact the Property are discussed above in the appropriate sections.

Location	Number of Listing(s)	Listing(s) of Concern
Property	0	0
Adjoining / Adjacent Land	0	
Surrounding Area	20	

### 3.1.2 Regulatory Agency File and Records Review

Regulatory agency files obtained for purposes of this assessment and if deemed necessary to determine RECs, HRECs, CRECs or a *de minimis* condition in connection with the Property, are summarized in the State and Federal Regulatory Review section. Given that the Property, as well as adjoining or nearby property was listed in the regulatory database report reviewed for this assessment, additional file reviews were warranted at the time of this assessment. Available files obtained by Nova are included in the Appendix and previously discussed in the regulatory database section.

### 3.1.3 Activity Use Limitations (AULs) and Environmental Liens (ELs)

Inquiry related to AULs and ELs were included on the Pre-Survey Questionnaire provided to the KSM during the preparation of this ESA.

AUL or EL identified or reported during the preparation of this ESA are summarized in the table below.

Source	Summary / Description
Interview Information (Written or Verbal Responses)	The KSM and/or User had no knowledge that an EL or AUL has been recorded for the Property.
Bergen County Assessor / Tax Information	ELs or AULs were not identified based on review of available information.
County Recorder / Registry of Deeds or Judicial Records	ELs or AULs were not identified based on review of available information.
Preliminary Title Reports, Title Commitments, Condition of Title, or Title Abstracts	Information not obtained and/or provided for review.
Independent Lien Search	Information not obtained and/or provided for review.
Environmental Super Lien Statute	

Source	Summary / Description
State of NJ	Environmental Super Lien Exists: Yes New Jersey has a first priority Super Lien Statute for clean up of hazardous waste (N.J. Stat. Ann. §58:10-23.11f(f)). N.J. Stat. Ann. §58:10-23.11f(f) allows the State to file a super environmental lien against affected real property. A non-priority lien is allowed against all other revenues and real and personal property of a liable party. N.J. Stat. Ann. §58:10B-25.2 allows the state to file a super environmental lien against contaminated property in a brownfield development area, where the state has awarded a grant to a municipality, county or development entity under the New Jersey Hazardous Discharge Site Remediation Fund, and the grantee is not the property owner. The environmental lien is removed from the property in the event the municipality, county or redevelopment agency subsequently take title to the property. In addition, where the property comprises six dwellings or less and is used for residential purposes only, the law allows only a non-priority lien.

### 3.1.4 Interviews with State/Local Government Officials

The following agencies, as indicated, were contacted to obtain information regarding the presence of USTs, the use or storage of hazardous materials/petroleum products, current violations, emergency response actions or any documentation relative to environmental matters at the Property. Correspondence records, if any, are provided in the Appendix and specific information regarding individuals/agencies contacted is summarized in the interview section of this report. Should information be received from agencies that were unresponsive to information requests within the time frame of this report, if any, that alters the conclusions of this report an addendum will be forwarded to the Client.

Per the ASTM Standard, "a reasonable attempt shall be made to interview at least one staff member of any one of the following types of state and/or local government agencies" that serve the area surrounding the Property: fire department; health agency; agency having jurisdiction over hazardous waste disposal or other environmental matters; and the agency responsible for the issuance of building permits or groundwater use permits that document the presence of AULs. For purposes of this assessment, the following agencies were contacted in an effort to obtain information indicating the presence of RECs.

The local authority that currently governs the Property is reportedly the Borough of Edgewater.

Interviews with State/Local Government Officials		
Agency Type	Agency Name	Comment
Fire Department	Edgewater Fire Department	Response not received within the time frame of this report.
Environmental Health Department	Bergen County Environmental Health Division	Response not received within the time frame of this report.
Building Department	Edgewater Building Department	Response not received within the time frame of this report.
Water Quality Department	Veolia	Obtained Water Quality Report
State Environmental Department	New Jersey Department of Environmental Protection (NJDEP)	Obtained records online

## 3.2 Physical Setting Sources

### 3.2.1 Topography

The United States Geological Survey (USGS), Weehawken, NJ Quadrangle 7.5-minute series topographic map was reviewed for this ESA and is summarized below.

Physiography	
Topographic Property Elevation	9 feet above mean sea level.
Topographic Considerations	Flat / Slopes downward toward the east (E).
Other Significant Surface Features	Surface waters/water bodies, production wells or other significant surface features are not depicted.

### 3.2.2 Soils / Geology

Soil and geologic information was obtained based on review of published information as detailed within the Reference section of this report.

Soils / Geology	
Surface Soils	
Soil Name	Urban land
Description	Urban land soils are soils that have been altered or covered by structures. Classifying these soils is not practical and includes remnants of other soils that have been altered by cutting, filling or grading in urban development. The areas of this complex are used mainly for community development.
Geologic Formation	
Formation Name	Diabase, Lockatong and Stockton Formations
Description	<p>Diabase: Upper Jurassic-age fine-grained to aphanitic dikes; medium- to coarsegrained, subophitic discordant stock-like intrusions of dark-greenish-gray to black diabase; and plugs of dark gray, concordant to discordant sheetlike, medium- to coarse-grained, quartz-rich to albite-rich granophyre.</p> <p>Lockatong Formation: Upper Triassic-age cyclically-deposited sequences consisting of light- to dark-gray, greenish-gray, and black, dolomitic or analcime-bearing silty argillite, laminated mudstone, silty to calcareous, argillaceous, very-fine-grained pyritic sandstone and siltstone, and minor silty limestone.</p> <p>Stockton Formation: Upper Triassic-age light-gray, light-grayishbrown, yellowish- to pinkish-gray, or violet-gray to reddish-brown, medium- to coarse-grained arkosic sandstone and reddish- to purplish-brown mudstone, silty mudstone, argillaceous siltstone, and shale.</p>

### 3.2.3 Hydrology

The following information was obtained based on review of published information as detailed within the Reference section of this report.

Hydrology	
Primary Aquifer	Early Mesozoic Basin - Newark Basin

Hydrology	
Aquifer Description	<p>The Newark Basin extends from the Hudson River Valley to the divide between the Schuylkill and the Susquehanna Rivers in Pennsylvania. The Newark Basin contains three principal stratigraphic units. From oldest to youngest, these are the Stockton Formation of Triassic age, which is mainly soft feldspathic sandstone, shale, and some conglomerate; the Lockatong Formation of Triassic age, which is predominately gray and black siltstone and shale; and the Brunswick Group of Jurassic and Triassic age, which contains argillite, shale, siltstone, sandstone, conglomerate, and three basalt units. The igneous rocks that occur as sills and flows parallel to and interbedded with the sedimentary beds and as dikes and stocks that cut across them are resistant to erosion, and form hills. The Lockatong Formation, which is the least productive water-yielding sedimentary rock in the basin, is more resistant to erosion than the other sedimentary rocks and also underlies low hills.</p> <p>The aquifers in early Mesozoic basins are mostly sandstone, siltstone, and shale, with some limestone and conglomerate. The minerals that compose these rocks are slightly more soluble than those of the rocks that compose the crystalline-rock and undifferentiated sedimentary-rock aquifers. Dissolved-solids concentrations in water from the aquifers in early Mesozoic basins average about 230 milligrams per liter, and hardness averages about 160 milligrams per liter, which is considered to be hard. The median pH is 7.6; the dissolution of calcium and magnesium carbonate raises the pH of the water and renders it less acidic. Chloride and sulfate concentrations average about 12 and 29 milligrams per liter, respectively, but chloride concentrations as large as 1,400 milligrams per liter and sulfate concentrations as large as 1,200 milligrams per liter have been reported in water from deep wells. The median iron concentration is 0.1 milligram per liter, but concentrations as large as 5.3 milligrams per liter have been reported. The water from the aquifers in early Mesozoic basins is mostly a calcium bicarbonate type.</p>
Depth to Groundwater	Approximately 2 to 10 feet below the ground surface
On-Property Water Bodies	Settling ponds, lagoons, surface impoundments, or natural catch basins were not observed at the Property during this investigation.
Closest off-Property Water Body	The Hudson River located approximately 240 feet east of the Property
Shallow Groundwater Flow Direction	Nova considered the topography of the general Property area and inferred that the most likely hydrogeologic gradient would be to the east (E).
Sole Source Aquifer	The Property does not overlie a sole source aquifer.

### 3.2.4 Other Physical Settings Sources

Other Physical Setting Sources	
Flood Information	
Flood Zone, Panel Number and Date	Zone AE according to Panel Number 34003C0286H, dated August 28, 2019.
Flood Zone Description	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. Base flood elevations (BFEs) are shown within these zones.
Distance to Closest Flood Hazard	The Property is located within a designated flood hazard area.
Oil and Gas Exploration (current or historical)	
Oil or Gas Wells	Historical/current oil or gas exploration was not identified within the Property limits or within immediately surrounding properties.
Pipelines	Pipelines were not identified within the Property limits or within immediately surrounding properties.
Wetlands	
Wetland Areas	According to the US Fish and Wildlife Service Wetlands Mapper, the Property or nearby land is not located in a wetland area. In addition, evidence of suspect wetlands was not observed at the time of the assessment.
Well Records	
Well Log Records / Well Mapping Program	No water wells and/or groundwater monitor wells were recorded on file for the Property and/or adjoining/nearby land.

### 3.3 Historical Use Information

The purposes of obtaining and reviewing "historical sources is to develop a history of the previous uses of the Property and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the Property." Nova attempted to research all obvious Property use from the present, back to the Property's first developed use; or back to 1940, whichever is earlier. Copies of below pertinent sources reviewed, such that establish Property uses or changes in use, are included in the Appendix of this report.

Historical Sources		
Historical Resource	Checked if Reviewed	Years Reviewed
Aerials	✓	1931, 1953, 1959, 1966, 1969, 1976, 1984, 1995, 2002, 2006, 2008, 2009, 2010, 2011, 2013, 2015, 2017, 2019
Fire Insurance Maps	✓	1887, 1900, 1911, 1921, 1922, 1928, 1930, 1950, 1968
Topographic Maps	✓	1891, 1897, 1898, 1900, 1947, 1956, 1966, 1979, 1997, 2013, 2016, 2019
Local City Directories	✓	1971, 1976, 1981, 1986, 1991, 1996, 1998, 2000, 2003, 2008, 2012, 2016, 2020
Tax Files	✓	2022
Recorded Land Title Records		Not reasonably ascertainable or considered to be useful.
Building Department Records		OPRA Request submitted; a response is pending.
Zoning/Land Use Records	✓	2022
Other Historical Sources	✓	Previous environmental assessment(s) as further discussed in Section 3.3.3.

#### 3.3.1 Summary of Historical Property Uses

The following is a summary of historical Property use based on review of available historical resources.

Property	
Time Period	Historical Summary
1887-1911	Undeveloped, backfilled land.
1911-1928	Developed with the Bulls Ferry Chemica Company facility, manufacturers of cotton & silk sizes.
1928-1930	Undeveloped land.
1930-1959	The northern portion of the Property is developed with large storage tanks containing cotton seed oil for the adjoining Lever Brothers manufacturing plant.
1959-2011	Developed with a portion of the Lever Brothers Research and Development facility on the south side and a portion of a refinery and boiler room on the north side until 1995 when the refinery was demolished.
2011-2021	The Lever Brothers Research and Development facility is demolished.
2021-Present	The existing residential building is constructed.

According to available historical research, the Property was formerly developed with the Unilever (also known as Lever Brothers) Research and Development (R&D) facility circa 1959 until 2011. Operations at the Property included research and development of new products including perfumes and development of new production machinery. The R&D building was part of a much larger 47-acre industrial park that was in use since the 1900s, and was occupied by Unilever from the 1930s until 2004. In 2004, iPark Edgewater LLC acquired the industrial park and began a piecemeal project of demolishing, remediating, and redeveloping portions of the industrial park. The R&D building was demolished in 2011. Information regarding historical use of the Property is discussed in greater detail within the State and Federal Regulatory Review section wherein it was determined to be a REC in connection with the Property.

### 3.3.1.1 Aerial Photographs

Historical Property Uses - Aerial Photographs	
Year(s)	Description
1931, 1953	The northern portion of the Property is developed with aboveground storage tanks used by an adjoining industrial facility to the north. The remainder of the Property is undeveloped.
1959, 1966, 1969, 1976	A commercial office building and parking lot is present on the Property south of the storage tanks.
1984, 1995	The storage tanks are no longer present on the north side of the Property. The office building remains present.
2002, 2006, 2008, 2009	The northern portion of the Property has become overgrown.
2011	Demolition of the office building has commenced.
2013, 2015, 2017	The Property is undeveloped.
2019	Construction of the existing residential building has commenced.

### 3.3.1.2 Fire Insurance Maps

Historical Property Uses - Fire Insurance Maps	
Year(s)	Description
1887, 1900	The Property is undeveloped.
1911	The Property is developed with a portion of the Bulls Ferry Chemical Company facility, manufacturers of cotton and silk sizes. Onsite operations include mill rooms on the north side, a central boiler room, a dwelling, an open shed for barrels, a tin room, several storage tanks, and storage galleries on the south side.
1921	The Property is developed with a portion of the Bulls Ferry Chemical Company facility, manufacturers of cotton and silk sizes. Onsite operations include a mill a dry room, two oil rooms, and a storage room on the north side of the Property; an office and a boiler house in the center of the Property; and a gallery and storage room on the south side of the Property.
1922	The Property is developed with a portion of the Bulls Ferry Chemical Company facility, manufacturers of cotton and silk sizes. No specific onsite operations are depicted.
1928, 1930	The Property is undeveloped.
1950	The northern portion of the Property has been redeveloped with a portion of a refinery and aboveground storage tanks containing cotton seed oil for the adjoining Lever Brothers manufacturing facility to the north. The remainder of the Property is undeveloped.
1968	The northern portion of the Property is developed with a portion of a refinery and boiler house for the adjoining north Lever Brothers manufacturing facility. The southern portion of the Property is developed with a portion of the Lever Brothers research facility, which include a portion of the pilot plant and a portion of the research lab.

### 3.3.1.3 USGS Topographic Maps

Historical Property Uses - USGS Topographic Maps	
Year(s)	Description
1891	Undeveloped, backfilled land.
1897, 1898, 1900	Developed on the north side with a small structure.
1947	Undeveloped, but part of the Lever Brothers facility.
1956	Depicted with aboveground storage tanks on the north side of the Property.
1966, 1979, 1997	Depicted with aboveground storage tanks on the north side of the Property and industrial buildings on the south side of the Property.
2013, 2016, 2019	Shaded white with no specific structures or features depicted.

### 3.3.1.4 Local City Directories

Historical Property Uses - Local City Directories	
Year(s)	Description
1971	Lever Brothers Research & Development Division (45 River Road)
1976	Directory page missing
1981	Lever Brothers Soaps & Shortenings Research & Development Division (45 River Road)
1986	Lever Brothers Packaging / Machinery Development / Perfume Manufacturing / Research & Development Division (45 River Road)
1991	Edgewater Test Center / CTS Sensory Evaluation; Lever Brothers Expansion Center / Pilot Plant; Lever Research, Inc.; Max Schmidhamer Industrial & Mechanical; Unilever Research US Packing Machinery Department; Unilever Research US Inc. Perfume Manufacturing (45 River Road)
1996	Edgewater Test Center / CTS Sensory Evaluation; Lever Brothers Co.; Lever Research, Inc.; Unilever Research US Inc. Research Machinery Development; Unilever Research US Inc. Perfume Manufacturing (45 River Road)
1998	Lever Brothers Co.; Lever Research Inc.; Unilever Edgewater (45 River Road).
2000, 2003	Lever Brothers Metro FCU; Unilever Research (45 River Road)
2008	Association Corp. Pat Counsel; Lever Brothers Metro FCU; Unilever Research (45 River Road)
2012	Bergen Engineering Co.; Lever Research Co.; Peoples First Choice FCU (45 River Road)
2016	Lever Brothers Metro FCU; Lever Research, Inc. (45 River Road)
2020	1 Main Street Edgewater LLC (45 River Road)

### 3.3.2 Summary of Historical Adjoining/Adjacent Property Uses

The following are summaries of each adjoining property based on review of available historical resources.

Adjoining/Adjacent Property	
Time Period	Historical Summary
North	
1897-1911	Undeveloped land.
1911-1928	Developed with the Spencer, Kellogg & Sons industrial facility (manufacturers of linseed oil).
1928-1947	Undeveloped land.
1947-1995	Developed with an expansion of the Lever Brothers industrial facility (manufacturers of edible products).

Adjoining/Adjacent Property	
Time Period	Historical Summary
1995-Present	Piecemeal demolition of the former Lever Brothers facility and redevelopment of the area with a parking garage and mixed residential and commercial structures.
<b>East</b>	
1897-1911	Undeveloped land.
1911-1928	Developed as part of the Bulls Ferry Chemical Company facility.
1928-1950	Undeveloped land.
1950-1995	Developed with a cotton seed oil refinery and a parking area for the Lever Brothers industrial facility.
1995-Present	Developed with The Pearl condominium building.
<b>South</b>	
1897-1968	Undeveloped land.
1968-2011	Developed with a portion of the Lever Brothers (Unilever) Research and Development facility.
1968-2015	Undeveloped land (the facility was demolished).
2015-Present	Reconfiguration of the area including development of Pembroke Lane and the construction of the existing bank.
<b>West</b>	
1887-1950	Undeveloped land.
1950-1968	Developed with numerous aboveground storage tanks containing cotton seed oil for the adjoining Lever Brothers industrial facility to the north.
1968-2011	Developed with a portion of the Lever Brothers (Unilever) Research and Development facility.
2011-2016	The facility is demolished and the parcel remains undeveloped.
2016-Present	The existing hotel is present.

Several of the adjacent sites are listed on the regulatory records reviewed. However, as discussed in Section 3.1.1, these facilities are not considered a REC to the Property.

### 3.3.3 Additional Environmental Record Sources

Nova was provided the following reports for review:

Nova reviewed a Remedial Action Report, Remedial Action Areas 1, 2 and 5; I Park Edgewater 45 River Road, Edgewater, New Jersey ISRA Case # 20030062 and #E20040267 prepared for the New Jersey Department of Environmental Protection (NJDEP), Bureau of Industrial Site Remediation, Trenton, NJ on behalf of I Park Edgewater, LLC. by GZA GeoEnvironmental Inc. (GZA) of New York, New York in August 2011. The report is summarized in Section 3.1.1.3.

Nova generally agrees with the findings presented in the report summarized above.

No other previously prepared environmental reports, lead-based paint surveys, lead-in-water surveys, asbestos surveys, geotechnical reports, or other documents pertaining to the Property were provided for Nova's review.

## 4.0 PROPERTY RECONNAISSANCE

Nova conducted a reconnaissance visit to the Property on 06/22/2022. The Property visit was performed by Kristen Castronuovo, Nova Field Manager. Nova was escorted during the Property visit by Joseph Daibez representing the property management and the ASTM-defined Key Site Manager (KSM). Joseph Daibez provided historical information and information regarding current Property operations. Nova was provided access to 10 percent of the apartment units, leasing office common areas, exterior areas, and maintenance areas.

The following table summarizes current Property operations observed at the time of the assessment. Specific information/details regarding such features (if any) are discussed in detail below.

	Checked if Present/Observed
<b>Interior and Exterior Observations</b>	
Hazardous Substances and Petroleum Products	✓
Hazardous Substance and Petroleum Products Containers (Not Necessarily in Connection With Identified Uses)	
Drums	
Unidentified Substance Containers	
Storage Tanks	
Odors	
Pools of Liquid	
PCBs (electrical or hydraulic equipment)	✓
Past Use(s) of the Property	
Additional Observations	
<b>Exterior Observations</b>	
Evidence of a Release (i.e. stained soil/pavement or stressed vegetation)	
Solid Waste	✓
Pits, Ponds, or Lagoons	
Wastewater	
Wells	
Septic Systems (current or historic)	
Landfills / Fill of Unknown Origin	
<b>Interior Observations</b>	
Stains or Corrosion	
Drains, Sumps and/or Catch Basins	

### 4.1 Hazardous Substances / Petroleum Products

Current use and likelihood of use, treatment, storage, disposal or generation of hazardous substances or petroleum products found in connection with the Property, if any, is discussed in the following sections.

### 4.1.1 Storage

Evidence of hazardous substances and/or petroleum products, within containers of five-gallons or more (if any), associated with current Property operations (use, treat, storage, disposal or generation) observed at the time of the assessment, if any, are detailed within the table below. Evidence of a release, if any, observed at the time of the assessment is discussed in the Evidence of a Release section.

Summary of Hazardous Substances / Petroleum Products				
Substance	Quantity / Container Description	Identified Use	Location on Property	Evidence of a Release
Routine Cleaning Products	Retail sized containers	Routine maintenance	Residential tenant areas	No

### 4.1.2 Management and Disposal

Information regarding management and disposal of hazardous substances and/or petroleum products is discussed in detail within the following table.

Type of Waste Generated	Management/Disposal Practices
None	N/A

### 4.1.3 Equipment

Operations or equipment/materials involving the use of hazardous substances or petroleum products, if any, are detailed within the following table.

Equipment Type	Description
Traction Elevators	Property operations include the use of two traction (passenger) elevators that are maintained by a third-party contractor (Honeywell) on a quarterly basis. The elevator motor rooms were located on the roof of the Property building and were accessible at the time of the inspection. Surficial staining and/or evidence of a release were not observed on the concrete surface surrounding the elevator equipment.

## 4.2 Drums

Drums were not observed at the time of the assessment within the limits of the Property.

## 4.3 Unidentified Substance Containers

Unidentified substance containers suspected of containing hazardous substances or petroleum products were not observed during the Property reconnaissance.

## 4.4 Storage Tanks

No evidence of aboveground or underground storage tanks was observed during the Property reconnaissance or reported during interviews.

## 4.5 Odors

Strong, pungent, or noxious odors were not noted at the time of the assessment or reported by Property sources.

## 4.6 Catch Basins, Sumps and Pools of Liquid

No evidence of on-Property sumps or catch basins was observed or reported during the Property reconnaissance aside from those used to convey stormwater. Additionally, pools of liquids/standing surface water containing liquid likely to be a hazardous substance or petroleum product were not observed at the time of the Property assessment or identified during interviews.

## 4.7 PCBs

Transformers and other electrical/hydraulic equipment (i.e., oil-filled switches, balers, hoists, vehicle lifts, dock levelers, hydraulic elevators, etc.) manufactured prior to 1979 could contain PCBs at a level that subjects them to regulation by the USEPA. In 1979, the USEPA issued a final rule, banning the manufacturing, processing, distribution of PCBs in commerce and use (44 Federal Register 31514). PCBs in electrical equipment are controlled by USEPA regulations 40 CFR, Part 761. The following table summarizes electrical or hydraulic equipment located within the limits of the Property (if any).

Quantity / Type of Equipment	Installation Date	Non-PCB Labels Present	Potentially Contains PCBs	Responsible Party/ Third Party Contractor	Evidence of a Release/ Physical Damage
One pad-mounted transformer	2021	Yes	No	Electric Provider	No
Trash Compactor	2021	No	No	Property Owner	No

Given that evidence of a release was not observed at the time of the assessment associated with above-referenced equipment, as well as management by the identified responsible party, the presence of such equipment is not considered a REC in connection to the Property.

## 4.8 Past Use(s) of the Property

Past uses of the Property were not observed during the Property reconnaissance that was likely to have involved the use, treatment, storage, disposal, or generation of hazardous substances or petroleum products.

## 4.9 Additional Observations

No additional relevant general Property characteristics were observed.

## 4.10 Evidence of a Release

No obvious indication of hazardous material or petroleum product or hazardous waste releases, such as stained areas or stressed vegetation, was observed during the Property reconnaissance or reported to Nova during interviews.

## 4.11 Solid Waste

To the extent visually and/or physically observed or identified from interviews or records review, the following is a summary of solid waste observed at the time of the assessment.

Solid Waste Disposal	
Solid Household Refuse	Collected in one trash compactor situated in the ground floor compactor room of the Property. Solid waste is collected on a regular basis by a third-party contractor. At the time of the assessment, contents within the container consisted of routine trash and household debris. Disposal of potentially hazardous substances or petroleum products within the referenced container was not observed. Exterior areas appeared generally free of material, trash, and/or debris.

## 4.12 Pits, Ponds or Lagoons

No evidence of on-Property pits, ponds, or lagoons, was observed or reported during the Property reconnaissance.

## 4.13 Wastewater

Property sources reported that discharge to sanitary sewer is limited to wastewater generated within the restrooms (i.e. toilets, sinks). No indication of industrial wastewater disposal or treatment systems were observed during the Property reconnaissance or reported to Nova.

Wastewater Source / Type	Description and Management/Disposal Practices
None	N/A

## 4.14 Wells

Wells (i.e. dry wells, irrigation wells, injection wells, abandoned wells or other wells), if any, observed during the Property reconnaissance or reported during interviews are summarized below.

Well Type/Use	Status	Installation Date	Depth	Screen Interval	Location
None	N/A	N/A	N/A	N/A	N/A

## 4.15 Septic Systems (Current or Historic)

Indication of a Property septic system or cesspool was not observed at the Property during the reconnaissance and/or review of publicly available resources.

## 4.16 Landfills / Fill of Unknown Origin

No evidence of on-Property landfilling was observed or reported during the Property reconnaissance. However, previous environmental investigations conducted at the Property have identified the presence of fill of unknown origin that has been impacted by hazardous substances and/or petroleum products. See Section 3.1.1.3 for further details.

## 4.17 Vapor Migration

During the performance of this Phase I ESA, the potential for a vapor migration condition/vapor encroachment condition (VEC) to exist in the subsurface at the Property was evaluated. As previously indicated, the Property was formerly developed with the Unilever (also known as Lever Brothers) Research and Development (R&D) facility circa 1959 until 2011. The R&D building was part of a much larger 47-acre industrial park that was in use since the 1900s, and was occupied by Unilever from the 1930s until 2004. In 2004, iPark Edgewater LLC acquired the industrial park and began a piecemeal project of demolishing, remediating, and redeveloping portions of the industrial park. The R&D building was demolished in 2011. Significant remediation of the Property was completed in 2010 and 2011. The Property building was constructed in 2021 with a vapor barrier and 4-inch PVC exhaust stacks serving as a passive vapor exhaust system with available outlets for connection to an extractor fan if an active system were to be installed in the future. The LSRP for the remediation project reportedly conducted a recent vapor intrusion compliance monitoring at the Property through the collection of sub-slab vapor samples and ground floor indoor air quality samples; all samples collected and analyzed were reportedly within current state and federal indoor air quality and vapor intrusion guidelines. As such, a VEC was not identified for the Property during the course of this assessment.

## 4.18 Non-Scope Considerations (NSCs)/Business Environmental Risks (BERs)

### 4.18.1 Asbestos Containing Materials (ACMs)

Based on the 2021 construction date (i.e. post 1981) and Fannie Mae's Guidelines, asbestos sampling was not performed. No further action or investigation is recommended regarding asbestos-containing materials at the Property.

### 4.18.2 Lead-Based Paint (LBP)

Based on the date of construction (2021), lead-based paint (LBP) is unlikely to have been used at the Property and was not sampled in accordance with the Fannie Mae's Environmental Guidelines. No further action or investigation is recommended regarding lead-based paint at the Property.

### 4.18.3 Radon

The USEPA has prepared a map to assist national, state, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the USEPA Action limit of 4.0 picoCuries per liter of air (pCi/L). It is important to note that the USEPA has found homes with elevated levels of radon in all three zones, and the USEPA recommends Property-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

A review of the EPA Map of Radon Zones places the Property in Zone 2, where the average predicted radon levels are between 2.0 and 4.0 pCi/L.

Based on the radon propensity, radon is not considered to be a significant concern and no sampling was conducted.

### 4.18.4 Mold

As part of this assessment, Nova performed a limited visual inspection for the significant presence of mold. A class of fungi, molds have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments, and produce tiny spores to reproduce, just as plants produce seeds. When mold spores land on a damp spot indoors, they may begin growing and digesting whatever they are growing on in order to survive. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

Nova observed interior areas of the Property for the presence or significant presence of mold. Nova did not note obvious visual or olfactory indications of the presence of mold, nor did Nova observe obvious indications of significant water damage. No sampling of suspect surfaces was conducted as part of this assessment.

This activity was not designed to discover all areas which may be affected by mold growth on the Property. Rather, it is intended to give the Client an indication if significant (based on observed areas) mold growth is present at the Property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the Property.

### 4.18.5 Lead in Drinking Water / Overall Drinking Water Quality

The Property is connected to the municipal potable water supply provided by Veolia. According to the 2021 Consumer Confidence Report, the drinking water supplied to the Property is compliant with state and federal standards, including those for lead and copper.

Nova did not conduct sampling of drinking water at the Property for the presence of total lead content.

DRAFT

## 5.0 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were conducted during this assessment in order to obtain information indicating RECs in connection with the Property. Findings from these interviews are discussed in the appropriate sections in this report.

### 5.1 Present Owner, Occupants and Key Site Manager

Nova made reasonable attempts to interview occupants of the Property who possessed knowledge of its current and past use history. Individuals with good knowledge of the uses and physical characteristics of the Property that were interviewed during the course of this assessment are summarized below. Interview content is included in various sections of this report.

Interviews					
Name	Affiliation	Contact Information	Date Contacted / Interviewed	Duration of Occupancy	Comments
Joseph Daibez	Property Owner, Daibez Enterprises	joe.diabes@gmail.com	06/22/2022	1 year	Escorted Nova through the Property and provided access to units.
Jimmy Tomeh	Superintendent	Not Provided	06/22/2022	1 year	Provided integral building information.

### 5.2 Past Owners, Operators and Occupants

Interviews with past owners, operators, and occupants that are likely to have material information regarding the potential for contamination at the Property were not considered reasonably ascertainable during the course of this assessment.

### 5.3 State and/or Local Government Officials

The following State and/or Local agencies that serve the area in which the Property is located were contacted in an effort to obtain information indicating RECs in connection with the Property. Interview content is discussed in detail within the Records Review section.

Interviews			
Name	Affiliation	Contact Information	Date Contacted / Interviewed
Chief Joseph Chevalier	Edgewater Fire Department	201-943-1700	06/22/22
John Candelmo Construction Official	Edgewater Building Department	201-943-1700, Ext. 3127	06/22/22
Online Resource	Edgewater Planning and Zoning	<a href="#">Edgewater Zoning Map</a>	06/24/22
Online Resource	Edgewater Tax Assessor	<a href="#">New Jersey Association of County Tax Boards (NJACTB) Records Search</a>	06/24/22
Online Resource	NJDEP	<a href="#">NJDEP DataMiner</a>	06/24/22

## 5.4 Others

Information obtained during interviews with other local government officials is incorporated into the appropriate segments of this report.

DRAFT

## 6.0 FINDINGS, OPINIONS AND CONCLUSIONS

### 6.1 Findings and Opinions

Evidence of RECs, CRECs, HRECs or other environmental issues in connection with the Property or off-Property facilities, if any, are detailed within the table below.

Finding(s)	Opinion(s)
<b>Property - RECs</b>	
<p>The Property was formerly developed with the Unilever Research and Development (R&amp;D) facility circa 1959 until 2011. The R&amp;D building was part of a much larger 47-acre industrial park that was in use since the 1900s, and was occupied by Unilever from the 1930s until 2004. The R&amp;D building was demolished in 2011.</p> <p>According to a GZA GeoEnvironmental, Inc. (GZA) August 2011 Remedial Action Report (RAR), the Property is located in RAA-2, which is located in the southern portion of the former industrial park. Previous soil and groundwater investigations conducted at the Property identified subsurface impact from benzene, naphthalene, various polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and heavy metals from historic fill and soft coal tar-derived roofing pitch material beneath the Property. Remediation of the Property consisted of excavating three hotspots of contamination and the direct removal and off-site disposal of soft pitch material serving as a direct source of groundwater contamination. Going forward, GZA proposed a groundwater monitoring program in conjunction with a Classification Exception Area (CEA) as an institutional control to eliminate the direct exposure to groundwater pathway. In addition, a groundwater cut-off wall proposed along the Hudson River would limit the discharge of impacted groundwater to sediment and surface water.</p> <p>According to the current Licensed Site Remediation Professional (LSRP) for the remediation project, the groundwater cut-off wall and funnel &amp; gate system were installed in 2018 along the Hudson River. The Property building was constructed with a vapor barrier and 4-inch PVC exhaust stacks serving as a passive vapor exhaust system with available outlets for connection to an extractor fan if an active system were to be installed in the future. Vapor intrusion compliance monitoring was recently conducted at the Property through the collection of sub-slab vapor samples and ground floor indoor air quality samples; all samples collected and analyzed were reportedly within current state and federal indoor air quality and vapor intrusion guidelines. Currently, the LSRP has received approval for the installation of an updated groundwater monitoring network to facilitate monitored natural attenuation of the groundwater throughout the entire site (including the Property) and will be updating a deed notice to include additional lots throughout the entire industrial park. Arcadis has recently been approved for an extension of the regulatory compliance date to May 6, 2024.</p>	<p>The presence of known contaminated historic fill and groundwater at the Property constitutes a REC. However, groundwater at the Property is not used for potable purposes and concentrations of VOCs, SVOCs, and metals detected in groundwater at the Property do not currently present a vapor intrusion concern at the Property as evidenced by the recent vapor intrusion compliance conducted at the Property by Arcadis. Furthermore, the Property building is equipped with a vapor protection barrier and passive vapor depressurization system with the ability to equip an active vapor depressurization system if so desired. Finally, the Property is capped with asphalt, concrete, landscaping/hardscaping, and a slab-on-grade structure thereby preventing direct human contact with the underlying historic fill material. Remediation of the Property has been completed and future monitoring of the Property is underway by an LSRP retained by the responsible party (iPark Edgewater LLC) under the oversight of the NJDEP and the USEPA.</p>
<b>Property - CRECs</b>	
None	None
<b>Property - HRECs</b>	
None	None
<b>Off-Property - RECs/CRECs/HRECs</b>	
None	None
<b>De Minimis Environmental Conditions</b>	

Finding(s)	Opinion(s)
None	None

The following table summarized the environmental professional opinion, indicating whether the above-referenced REC(s), CREC(s) and/or HREC(s), if any, pose a health or safety risk to the occupants or an environmental risk.

Finding	Health or Safety Risk to Human Health or Safety to the Occupants of the Property
REC	No
CREC	No
HREC	No

## 6.2 Conclusions and Recommendations

Nova has performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 of 45 River Road at 45 River Road, Edgewater, NJ. Any exceptions to or deletions from this practice are described in the Introduction Section of this report.

This assessment has revealed no evidence of RECs (including CRECs) in connection with the Property except for the following. Based on the information available during the course of this assessment, and given the presence of the following RECs in connection with the Property, Nova also provides the following recommendation(s).

Conclusion(s)	Recommendation(s)
<p>The known presence of known contaminated historic fill and groundwater at the Property constitutes a REC. However, groundwater at the Property is not used for potable purposes and concentrations of VOCs, SVOCs, and metals detected in groundwater at the Property do not currently present a vapor intrusion concern at the Property as evidenced by the recent vapor intrusion compliance conducted at the Property by Arcadis. Furthermore, the Property building is equipped with a vapor protection barrier and passive vapor depressurization system with the ability to equip an active vapor depressurization system if so desired. Finally, the Property is capped with asphalt, concrete, landscaping/hardscaping, and a slab-on-grade structure thereby preventing direct human contact with the underlying historic fill material.</p>	<p>Nova recommends that the LSRP adhere to the updated compliance timeline as stipulated by the NJDEP and the USEPA to establish the groundwater monitoring network and monitored natural attenuation program, as well as the establishment of required institutional controls for soil and groundwater.</p>

## 6.2.1 Non-Scope Considerations (NSCs)/Business Environmental Risks (BERs)

Environmental issues with regard to NSCs or BERs, if any, identified in connection with the Property at the time of the Property assessment are detailed below.

NSC / BER	Concern	Finding	Recommendation
PCB	No	None	None
ACM	No	None	None
LBP	No	None	None
Radon	No	None	None
Mold	No	None	None
Lead in Drinking Water	No	None	None
Air Quality or Vapor Intrusion	No	None	None
Hazardous Substances or Petroleum Products	No	None	None
AST, UST, or LUST Concern at the Property	No	None	None
Other / Additional BERs	None		None

## 6.3 Deletions and Deviations

Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Property based on reasonably ascertainable information, as well as reasonable constraints with regard to time and cost. All limiting conditions, deletions, and deviations from the ASTM E1527-13 (if any) is listed individually and in detail, including Client imposed constraints, and all additions, within the Introduction section of this report.

RE: CITY DIRECTORY RESEARCH  
45 River Road  
Edgewater, NJ 07020

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

**Search Criteria:**

2-200 of River Road

2-200 of Somerset Street

**Search Notes:**

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

# Executive Summary

## Property Information:

**Project Property:** 45 River Road  
45 River Road Edgewater NJ 07020

**Project No:** B22-6516

## **Coordinates:**

**Latitude:** 40.80284136  
**Longitude:** -73.99250188  
**UTM Northing:** 4,517,359.24  
**UTM Easting:** 584,984.77  
**UTM Zone:** 18T

**Elevation:** 9 FT

## Order Information:

**Order No:** 22061601078  
**Date Requested:** June 16, 2022  
**Requested by:** Nova Group, GBC

<b>Waste Code Description:</b>					REACTIVE WASTE	
<b>Hazardous Waste Code:</b>					F003	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					D039	
<b>Waste Code Description:</b>					TETRACHLOROETHYLENE	
<b>Hazardous Waste Code:</b>					F005	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					U080	
<b>Waste Code Description:</b>					METHANE, DICHLORO- (OR) METHYLENE CHLORIDE	

**Hazardous Waste Handler Details**

#### Hazardous Waste Handler Details

**Sequence No:** 1  
**Receive Date:** 19800818  
**Handler Name:** UNILEVER RESEARCH US  
**Federal Waste Generator Code:** 1  
**Generator Code Description:** Large Quantity Generator  
**Source Type:** Notification

#### Waste Code Details

**Hazardous Waste Code:** P105  
**Waste Code Description:** SODIUM AZIDE

**Hazardous Waste Code:** P009  
**Waste Code Description:** AMMONIUM PICRATE (R) (OR) PHENOL, 2,4,6-TRINITRO-, AMMONIUM SALT (R)

**Hazardous Waste Code:** P022  
**Waste Code Description:** CARBON DISULFIDE

**Hazardous Waste Code:** P030  
**Waste Code Description:** CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

**Hazardous Waste Code:** F002  
**Waste Code Description:** THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Hazardous Waste Code:** P098  
**Waste Code Description:** POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

**Hazardous Waste Code:** U002  
**Waste Code Description:** 2-PROPANONE (I) (OR) ACETONE (I)

**Hazardous Waste Code:** U028  
**Waste Code Description:** 1,2-BENZENEDICARBOXYLIC ACID, BIS(2-ETHYLHEXYL) ESTER (OR) DIETHYLHEXYL PHTHALATE

**Hazardous Waste Code:** U031  
**Waste Code Description:** 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

**Hazardous Waste Code:** U144  
**Waste Code Description:** ACETIC ACID, LEAD(2+) SALT (OR) LEAD ACETATE

**Hazardous Waste Code:** U146  
**Waste Code Description:** LEAD SUBACETATE (OR) LEAD, BIS(ACETATO-O)TETRAHYDROXYTRI-

**Hazardous Waste Code:** U117

<b>Hazardous Waste Code:</b>			F027			
<b>Waste Code Description:</b>			DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)			
<b>Hazardous Waste Code:</b>			D008

A numeric estimate of the relative severity of a hazardous substance release or potential release based on: (1) the relative potential of substances to cause hazardous situations; (2) the likelihood and rate at which the substances may affect human and environmental receptors; and (3) the severity and magnitude of potential effects. The score is computed using the hazard ranking system (HRS).

**Waste Code Details**

<b>Hazardous Waste Code:</b>	K017
<b>Waste Code Description:</b>	HEAVY ENDS (STILL BOTTOMS) FROM THE PURIFICATION COLUMN IN THE PRODUCTION OF EPICHLOROHYDRIN.
<b>Hazardous Waste Code:</b>	K023
<b>Waste Code Description:</b>	DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.
<b>Hazardous Waste Code:</b>	K086
<b>Waste Code Description:</b>	SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.
<b>Hazardous Waste Code:</b>	K101
<b>Waste Code Description:</b>	DISTILLATION TAR RESIDUES FROM THE DISTILLATION OF ANILINE-BASED COMPOUNDS IN THE PRODUCTION OF VETERINARY PHARMACEUTICALS FROM ARSENIC OR ORGANO-ARSENIC COMPOUNDS.

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
<b>Hazardous Waste Code:</b>					D001	
<b>Waste Code Description:</b>					IGNITABLE WASTE	
<b>Hazardous Waste Code:</b>					F001	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K018	
<b>Waste Code Description:</b>					HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K025	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.	
<b>Hazardous Waste Code:</b>					K026	
<b>Waste Code Description:</b>					STRIPPING STILL TAILS FROM THE PRODUCTION OF METHYL ETHYL PYRIDINES.	
<b>Hazardous Waste Code:</b>					D002	
<b>Waste Code Description:</b>					CORROSIVE WASTE	
<b>Hazardous Waste Code:</b>					K015	
<b>Waste Code Description:</b>					STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.	
<b>Hazardous Waste Code:</b>					K048	
<b>Waste Code Description:</b>					DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					K052	
<b>Waste Code Description:</b>					TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					F003	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					F004	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					F005	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K011	
<b>Waste Code Description:</b>					BOTTOM STREAM FROM THE WASTEWATER STRIPPER IN THE PRODUCTION OF ACRYLONITRILE.	
<b>Hazardous Waste Code:</b>					K022	
<b>Waste Code Description:</b>					DISTILLATION BOTTOM TARS FROM THE PRODUCTION OF PHENOL/ACETONE FROM CUMENE.	
<b>Hazardous Waste Code:</b>					K027	
<b>Waste Code Description:</b>					CENTRIFUGE AND DISTILLATION RESIDUES FROM TOLUENE DIISOCYANATE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K029	
<b>Waste Code Description:</b>					WASTE FROM THE PRODUCT STEAM STRIPPER IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.

**Waste Code Details**

Hazardous Waste Code: K017  
 Waste Code Description: HEAVY ENDS (STILL BOTTOMS) FROM THE PURIFICATION COLUMN IN THE PRODUCTION OF EPICHLOROHYDRIN.

Hazardous Waste Code: K023  
 Waste Code Description: DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.

Hazardous Waste Code: K086  
 Waste Code Description: SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

Hazardous Waste Code: K101  
 Waste Code Description: DISTILLATION TAR RESIDUES FROM THE DISTILLATION OF ANILINE-BASED COMPOUNDS IN THE PRODUCTION OF VETERINARY PHARMACEUTICALS FROM ARSENIC OR ORGANO-ARSENIC COMPOUNDS.

Hazardous Waste Code: D001  
 Waste Code Description: IGNITABLE WASTE

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			F001		THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K018		HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K025		DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K026		STRIPPING STILL TAILS FROM THE PRODUCTION OF METHYL ETHYL PYRIDINES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			D000		DESCRIPTION	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K024		DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K028		SPENT CATALYST FROM THE HYDROCHLORINATOR REACTOR IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			D002		CORROSIVE WASTE	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K015		STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K048		DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K052		TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			F002		THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K010		DISTILLATION SIDE CUTS FROM THE PRODUCTION OF ACETALDEHYDE FROM ETHYLENE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K014		BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K019		HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K030		COLUMN BOTTOMS OR HEAVY ENDS FROM THE COMBINED PRODUCTION OF TRICHLOROETHYLENE AND PERCHLOROETHYLENE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K050		HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K087		DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>			K095		DISTILLATION BOTTOMS FROM THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					K049 SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					K103 PROCESS RESIDUES FROM ANILINE EXTRACTION FROM THE PRODUCTION OF ANILINE.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					K051 API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					K105 SEPARATED AQUEOUS STREAM FROM THE REACTOR PRODUCT WASHING STEP IN THE PRODUCTION OF CHLOROBENZENES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					F003 THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					F004 THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b> <b>Waste Code Description:</b>					F005 THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Federal Waste Generator Code:** 1  
**Generator Code Description:** Large Quantity Generator  
**Source Type:** Notification

**Waste Code Details**

**Hazardous Waste Code:** K013  
**Waste Code Description:** BOTTOM STREAM FROM THE ACETONITRILE COLUMN IN THE PRODUCTION OF ACRYLONITRILE.

**Hazardous Waste Code:** K009  
**Waste Code Description:** DISTILLATION BOTTOMS FROM THE PRODUCTION OF ACETALDEHYDE FROM ETHYLENE.

**Hazardous Waste Code:** K016  
**Waste Code Description:** HEAVY ENDS OR DISTILLATION RESIDUES FROM THE PRODUCTION OF CARBON TETRACHLORIDE.

**Hazardous Waste Code:** K020  
**Waste Code Description:** HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.

**Hazardous Waste Code:** K021  
**Waste Code Description:** AQUEOUS SPENT ANTIMONY CATALYST WASTE FROM FLUOROMETHANE PRODUCTION.

**Hazardous Waste Code:** K024  
**Waste Code Description:** DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.

**Hazardous Waste Code:** K028  
**Waste Code Description:** SPENT CATALYST FROM THE HYDROCHLORINATOR REACTOR IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.

**Hazardous Waste Code:** K085  
**Waste Code Description:** DISTILLATION OR FRACTIONATION COLUMN BOTTOMS FROM THE PRODUCTION OF CHLOROBENZENES.

**Hazardous Waste Code:** F003  
**Waste Code Description:** THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
					PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					F004	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					F005	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K011	
<b>Waste Code Description:</b>					BOTTOM STREAM FROM THE WASTEWATER STRIPPER IN THE PRODUCTION OF ACRYLONITRILE.	
<b>Hazardous Waste Code:</b>					K022	
<b>Waste Code Description:</b>					DISTILLATION BOTTOM TARS FROM THE PRODUCTION OF PHENOL/ACETONE FROM CUMENE.	
<b>Hazardous Waste Code:</b>					K027	
<b>Waste Code Description:</b>					CENTRIFUGE AND DISTILLATION RESIDUES FROM TOLUENE DIISOCYANATE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K029	
<b>Waste Code Description:</b>					WASTE FROM THE PRODUCT STEAM STRIPPER IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
<b>Hazardous Waste Code:</b>					K083	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM ANILINE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K093	
<b>Waste Code Description:</b>					DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM ORTHO-XYLENE.	
<b>Hazardous Waste Code:</b>					K017	
<b>Waste Code Description:</b>					HEAVY ENDS (STILL BOTTOMS) FROM THE PURIFICATION COLUMN IN THE PRODUCTION OF EPICHLOROHYDRIN.	
<b>Hazardous Waste Code:</b>					K023	
<b>Waste Code Description:</b>					DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.	
<b>Hazardous Waste Code:</b>					K086	
<b>Waste Code Description:</b>					SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.	
<b>Hazardous Waste Code:</b>					K101	
<b>Waste Code Description:</b>					DISTILLATION TAR RESIDUES FROM THE DISTILLATION OF ANILINE-BASED COMPOUNDS IN THE PRODUCTION OF VETERINARY PHARMACEUTICALS FROM ARSENIC OR ORGANO-ARSENIC COMPOUNDS.	
<b>Hazardous Waste Code:</b>					D001	
<b>Waste Code Description:</b>					IGNITABLE WASTE	
<b>Hazardous Waste Code:</b>					F001	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K018	
<b>Waste Code Description:</b>					HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K025	

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.	
<b>Hazardous Waste Code:</b>					K026	
<b>Waste Code Description:</b>					STRIPPING STILL TAILS FROM THE PRODUCTION OF METHYL ETHYL PYRIDINES.	
<b>Hazardous Waste Code:</b>					D002	
<b>Waste Code Description:</b>					CORROSIVE WASTE	
<b>Hazardous Waste Code:</b>					K015	
<b>Waste Code Description:</b>					STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.	
<b>Hazardous Waste Code:</b>					K048	
<b>Waste Code Description:</b>					DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					K052	
<b>Waste Code Description:</b>					TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					F002	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K010	
<b>Waste Code Description:</b>					DISTILLATION SIDE CUTS FROM THE PRODUCTION OF ACETALDEHYDE FROM ETHYLENE.	
<b>Hazardous Waste Code:</b>					K014	
<b>Waste Code Description:</b>					BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE.	
<b>Hazardous Waste Code:</b>					K019	
<b>Waste Code Description:</b>					HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K030	
<b>Waste Code Description:</b>					COLUMN BOTTOMS OR HEAVY ENDS FROM THE COMBINED PRODUCTION OF TRICHLOROETHYLENE AND PERCHLOROETHYLENE.	
<b>Hazardous Waste Code:</b>					K050	
<b>Waste Code Description:</b>					HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					K087	
<b>Waste Code Description:</b>					DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.	
<b>Hazardous Waste Code:</b>					K095	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
<b>Hazardous Waste Code:</b>					K103	
<b>Waste Code Description:</b>					PROCESS RESIDUES FROM ANILINE EXTRACTION FROM THE PRODUCTION OF ANILINE.	
<b>Hazardous Waste Code:</b>					K049	
<b>Waste Code Description:</b>					SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					K051	
<b>Waste Code Description:</b>					API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
<b>Hazardous Waste Code:</b>					K105	
<b>Waste Code Description:</b>					SEPARATED AQUEOUS STREAM FROM THE REACTOR PRODUCT WASHING STEP IN THE PRODUCTION OF CHLOROBENZENES.	
<b>Hazardous Waste Code:</b>					D000	
<b>Waste Code Description:</b>					DESCRIPTION	
<b>Hazardous Waste Code:</b>					K094	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM ORTHO-XYLENE.

 Waste Code Description: DISTILLATION OR FRACTIONATION COLUMN BOTTOMS FROM THE PRODUCTION OF CHLOROBENZENES.

Hazardous Waste Code: F003  
 Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004  
 Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
					VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					F005	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K022	
<b>Waste Code Description:</b>					DISTILLATION BOTTOM TARS FROM THE PRODUCTION OF PHENOL/ACETONE FROM CUMENE.	
<b>Hazardous Waste Code:</b>					K027	
<b>Waste Code Description:</b>					CENTRIFUGE AND DISTILLATION RESIDUES FROM TOLUENE DIISOCYANATE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K029	
<b>Waste Code Description:</b>					WASTE FROM THE PRODUCT STEAM STRIPPER IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
<b>Hazardous Waste Code:</b>					K083	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM ANILINE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K093	
<b>Waste Code Description:</b>					DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM ORTHO-XYLENE.	
<b>Hazardous Waste Code:</b>					K017	
<b>Waste Code Description:</b>					HEAVY ENDS (STILL BOTTOMS) FROM THE PURIFICATION COLUMN IN THE PRODUCTION OF EPICHLOROHYDRIN.	
<b>Hazardous Waste Code:</b>					K023	
<b>Waste Code Description:</b>					DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.	
<b>Hazardous Waste Code:</b>					K086	
<b>Waste Code Description:</b>					SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.	
<b>Hazardous Waste Code:</b>					K101	
<b>Waste Code Description:</b>					DISTILLATION TAR RESIDUES FROM THE DISTILLATION OF ANILINE-BASED COMPOUNDS IN THE PRODUCTION OF VETERINARY PHARMACEUTICALS FROM ARSENIC OR ORGANO-ARSENIC COMPOUNDS.	
<b>Hazardous Waste Code:</b>					F001	
<b>Waste Code Description:</b>					THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.	
<b>Hazardous Waste Code:</b>					K018	
<b>Waste Code Description:</b>					HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.	
<b>Hazardous Waste Code:</b>					K025	
<b>Waste Code Description:</b>					DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.	
<b>Hazardous Waste Code:</b>					K026	
<b>Waste Code Description:</b>					STRIPPING STILL TAILS FROM THE PRODUCTION OF METHYL ETHYL PYRIDINES.	
<b>Hazardous Waste Code:</b>					D002	
<b>Waste Code Description:</b>					CORROSIVE WASTE	
<b>Hazardous Waste Code:</b>					K015	
<b>Waste Code Description:</b>					STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.	
<b>Hazardous Waste Code:</b>					K048	
<b>Waste Code Description:</b>					DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.	

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
<b>Hazardous Waste Code:</b>			K052			
<b>Waste Code Description:</b>			TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.			
<b>Hazardous Waste Code:</b>			F002			
<b>Waste Code Description:</b>			THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.			
<b>Hazardous Waste Code:</b>			K010			
<b>Waste Code Description:</b>			DISTILLATION SIDE CUTS FROM THE PRODUCTION OF ACETALDEHYDE FROM ETHYLENE.			
<b>Hazardous Waste Code:</b>			K014			
<b>Waste Code Description:</b>			BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE.			
<b>Hazardous Waste Code:</b>			K019			
<b>Waste Code Description:</b>			HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.			
<b>Hazardous Waste Code:</b>			K030			
<b>Waste Code Description:</b>			COLUMN BOTTOMS OR HEAVY ENDS FROM THE COMBINED PRODUCTION OF TRICHLOROETHYLENE AND PERCHLOROETHYLENE.			
<b>Hazardous Waste Code:</b>			K087			
<b>Waste Code Description:</b>			DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.			
<b>Hazardous Waste Code:</b>			K095			
<b>Waste Code Description:</b>			DISTILLATION BOTTOMS FROM THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.			
<b>Hazardous Waste Code:</b>			K103			
<b>Waste Code Description:</b>			PROCESS RESIDUES FROM ANILINE EXTRACTION FROM THE PRODUCTION OF ANILINE.			
<b>Hazardous Waste Code:</b>			K049			
<b>Waste Code Description:</b>			SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.			
<b>Hazardous Waste Code:</b>			K105			
<b>Waste Code Description:</b>			SEPARATED AQUEOUS STREAM FROM THE REACTOR PRODUCT WASHING STEP IN THE PRODUCTION OF CHLOROBENZENES.			
<b>Hazardous Waste Code:</b>			K051			
<b>Waste Code Description:</b>			API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.			
<b>Hazardous Waste Code:</b>			D000			
<b>Waste Code Description:</b>			DESCRIPTION			
<b>Hazardous Waste Code:</b>			K094			
<b>Waste Code Description:</b>			DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM ORTHO-XYLENE.

DRAFT

# Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

## **Standard Environmental Record Sources**

### **Federal**

#### **Formerly Utilized Sites Remedial Action Program:**

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**Government Publication Date: Mar 4, 2017**

#### **National Priority List:**

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: Mar 30, 2022**

#### **National Priority List - Proposed:**

PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: Mar 30, 2022**

#### **Deleted NPL:**

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: Mar 30, 2022**

**SEMS List 8R Active Site Inventory:**

[SEMS](#)

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: Apr 27, 2022**

**Inventory of Open Dumps, June 1985:**

[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

**SEMS List 8R Archive Sites:**

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: Apr 27, 2022**

**EPA Report on the Status of Open Dumps on Indian Lands:**

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

**Comprehensive Environmental Response, Compensation and Liability Information System -**

[CERCLIS](#)

**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**CERCLIS - No Further Remedial Action Planned:**

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Apr 11, 2022**

**RCRA non-CORRACTS TSD Facilities:**

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: Apr 11, 2022**

**RCRA Generator List:**

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Apr 11, 2022**

**RCRA Small Quantity Generators List:**

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Apr 11, 2022**

**RCRA Very Small Quantity Generators List:**

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date: Apr 11, 2022**

**RCRA Non-Generators:**

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Apr 11, 2022**

**RCRA Sites with Controls:**

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

**Government Publication Date: Apr 11, 2022**

**Federal Engineering Controls-ECs:**

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Dec 30, 2021**

**Federal Institutional Controls- ICs:**

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date: Dec 30, 2021**

**Land Use Control Information System:**

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**Government Publication Date:** Sep 1, 2006

**Institutional Control Boundaries at NPL sites:**

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

**Government Publication Date:** Mar 30, 2022

**Emergency Response Notification System:**

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1982-1986

**Emergency Response Notification System:**

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1987-1989

**Emergency Response Notification System:**

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

**Government Publication Date:** Dec 31, 2021

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Aug 20, 2021

**FEMA Underground Storage Tank Listing:**

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date:** Dec 31, 2017

**Facility Response Plan:**

FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

**Government Publication Date:** Dec 31, 2021

**Delisted Facility Response Plans:**

DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

**Government Publication Date:** Dec 31, 2021

**Historical Gas Stations:**

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

**Government Publication Date: Jul 1, 1930**

**Petroleum Refineries:**

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

**Government Publication Date: Feb 4, 2022**

**Petroleum Product and Crude Oil Rail Terminals:**

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

**Government Publication Date: Feb 4, 2022**

**LIEN on Property:**

[SEMS LIEN](#)

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

**Government Publication Date: Apr 27, 2022**

**Superfund Decision Documents:**

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

**Government Publication Date: May 3, 2022**

**State**

**Site Remediation Program Delisted Sites List:**

[DELISTED SRP](#)

A list of sites that once appeared on the Site Remediation Program site list from the New Jersey Department of Environmental Protection (NJDEP) Data Miner but are no longer on the list.

**Government Publication Date: Mar 11, 2022**

**Historical Fill Areas:**

[HIST FILL](#)

Areas of historic fill covering more than approximately 5 acres, where historic fill is described as non-indigenous material placed on a site in order to raise the topographic elevation of the site. The Brownfield Contaminated Site Remediation Act (N.J.S.A. 58:10B-1 et seq.) requires the Department of Environmental Protection to map regions of the state where large areas of historic fill exist. No representation is made as to the composition of the fill or presence of contamination in the fill. Some areas mapped as fill may contain chemical-production waste or ore-processing waste that exclude them from the legislative definition of historic fill. Data made available by the New Jersey Department of Environmental Protection, Division of Water Supply and Geoscience.

**Government Publication Date: Mar 26, 2018**

**Known Contaminated Sites in New Jersey:**

[SHWS](#)

The Known Contaminated Sites List (KCSNJ) for New Jersey are those sites and properties where contamination of soil or ground water has been confirmed at levels equal to or greater than applicable standards. This list of Known Contaminated Sites may include sites where remediation is either currently under way, required but not yet initiated, or has been completed. Record details from GIS Open Data KCSNJ and New Jersey Department of Environmental Protection (NJDEP) Site Remediation Program KCSNJ Active, Pending, and Closed Sites reports. This database is state equivalent CERCLIS.

**Government Publication Date: Mar 25, 2022**

**Delisted Known Contaminated Sites:**

[DSHW](#)

The listing of sites removed from Known Contaminated Sites in New Jersey (KCSNJ). KCSNJ is an inventory that includes all sites in New Jersey with confirmed contamination. Sites are classified as either 'Active Sites with Confirmed Contamination', 'Pending Sites with Confirmed Contamination', or 'Closed Sites with Remediated Contamination'. Active Sites are those sites having one or more active cases (with any number of pending and/or closed cases). Pending Sites are those sites having one or more pending cases, no active cases, and any number of closed cases. Closed sites are those sites having only closed cases (sites in this category have no active or pending cases). This database is state equivalent CERCLIS.

**Government Publication Date: Mar 25, 2022**

**Site Re-Evaluation:**

[RE EVAL](#)

The sites listed were removed from the Department of Environmental Protection (DEP) Known Contaminated Sites in New Jersey (KCSNJ) report for reevaluation by the Site Remediation Program. These pending sites were a group of contaminated sites awaiting the execution of an oversight document, such as a Memorandum of Agreement or Administrative Consent Order, or the availability of resources for a publicly funded action prior to assignment to a specific remedial bureau. Due to the longevity that some of these sites had in this status and the possibility that some of the pending environmental concerns may have been addressed through subsequent remedial activities, the Department started reevaluating the pending environmental issues against the site's remedial history and current conditions. This database is state equivalent CERCLIS.

**Government Publication Date: Sept 2007**

**Solid Waste Facilities and Landfills:**

[SWF/LF](#)

The New Jersey Department of Environmental Protection (DEP) Solid and Hazardous Waste Management Program maintains the New Jersey Landfill database. The information has been compiled from several data sources and includes not only registered landfills, but also suspected illegal and preregulatory sites. The DEP describes the list as a work in progress.

**Government Publication Date: Feb 14, 2022**

**Non-Operating Landfills List:**

[NON OLF](#)

List of Non-Operating Landfills, including those having suspected or known contamination. The landfills included in this list are non-operating and historic landfills identified by, or reported to, the Department of Environmental Protection. The Site Remediation Program developed this inventory, through collaboration with local and regional environmental agencies, community representatives, and through review of historic materials, to prevent injury to human and ecological resources.

**Government Publication Date: Jul 2007**

**Site Remediation Program:**

[SITE REMEDIATION](#)

List of Site Remediation Program sites from the New Jersey Department of Environmental Protection (NJDEP) Data Miner. Includes: cases where contamination is suspected, but not yet confirmed (including potential LUST cases); publicly funded as well as privately funded sites; sites with Underground Storage Tank (UST) contamination and remediation (LUST); Superfund sites, Brownfields, Licensed Site Remediation Professional (LSRP) sites; and sites under the Industrial Site Recovery Act (ISRA).

**Government Publication Date: Mar 11, 2022**

**LUST- Leaking Underground Storage Tanks:**

[LUST](#)

A listing of the regulated Underground Storage Tank (UST) contamination cases recorded by the Department of Environmental Protection (DEP) Site Remediation and Waste Management (SRWM) program. Contains remedial and non-remedial information on sites subject to the Underground Storage of Hazardous Substances Act.

**Government Publication Date: Mar 8, 2022**

**UST Active Remediation:**

[UST REM](#)

A List of regulated Underground Storage Tanks (USTs) that have a cleanup underway, this data made available by State of New Jersey Department of Environmental Protection.

**Government Publication Date: Apr 14, 2022**

**Historic LUST- Leaking Underground Storage Tanks:**

[HIST LUST](#)

Historic Leaking Underground Storage Tanks. Spill records taken from Pre-2002 Incidents database (historic). This is no longer maintained or updated by the New Jersey Department of Environmental Protection (DEP).

**Government Publication Date: Dec 1, 2002**

**Delisted Leaking or Remediation Storage Tanks:**

[DELISTED LST](#)

Sites removed from the Site Remediation and Waste Management (SRWM) program's Underground Storage Tank (UST) contamination cases or the Department of Environmental Protection (DEP)'s list of Underground Storage Tank (UST) Active Remediation.

**Government Publication Date: Apr 14, 2022**

**Delisted Storage Tank Remediation:**

[DELIST STR](#)

This database contains a list of the inactive tanks removed from the New Jersey Department of Environmental Protection (DEP)'s UST Active Remediation database.

**Government Publication Date: Jul 07, 2016**

**Underground Storage Tanks:**

UST

List of Underground Storage Tank (UST)s regulated by the New Jersey Department of Environmental Protection (DEP) under their Underground Storage Tank Program.

**Government Publication Date: Mar 8, 2022**

**Delisted Storage Tanks:**

DELISTED TNK

This database contains a list of storage tank sites that were removed from the New Jersey Department of Environmental Protection (DEP) under their Underground Storage Tank Program.

**Government Publication Date: Mar 8, 2022**

**Major Facilities:**

MAJOR FAC

List of major & minor facilities recorded by the Department of Environmental Protection (DEP) Bureau of Release Prevention. The Spill Compensation and Control Act (the Spill Act, N.J.S.A. 58:10-23.11), establishes storage capacity as the basis for determining if a facility is major and thus subject to the Spill Act's planning requirements. A major facility is defined as a facility with a total, aggregate storage capacity of 20,000 gallons or more of hazardous substances other than petroleum products; 200,000 gallons or more of all hazardous substances including petroleum products; or an equivalent measure for substances not commonly measured by volume. This list also includes the status of minor facilities.

**Government Publication Date: Apr 18, 2022**

**Declaration of Environmental Restrictions / Deed Notices:**

DEED

List of all Declaration of Environmental Restrictions / Deed Notices (DER/DN) issued within the Department of Environmental Protection (DEP) Site Remediation and Waste Management (SRWM) program. "DER/DN" refers to a document that provides notice of specific real property contamination issues in accordance with N.J.A.C. 7:26 E, Appendix E.

**Government Publication Date: Jan 19, 2021**

**Sites with a Classification Exception Area:**

CEA

Sites with a Classification Exception Area (CEA) issued within the Department of Environmental Protection (DEP) Site Remediation and Waste Management (SRWM) program. A CEA is an area where one or more constituent standards and designated uses are suspended in accordance with N.J.A.C. 7:9 C-1.6.

**Government Publication Date: Jan 19, 2021**

**Publicly Funded Cleanups Site Status Report 2003:**

PUB FUNDED

The Publicly Funded Cleanup Site Status Report (2003) details efforts by the New Jersey Department of Environmental Protection's (NJDEP) Site Remediation and Waste Management Program (SRWM) to investigate and clean up contaminated properties using public funds.

**Government Publication Date: Dec 1, 2003**

**Brownfields:**

BROWNFIELDS

Any former or current commercial or industrial site, currently vacant or underutilized and on which there has been, or there is suspected to have been, a discharge of a contaminant. In 1997, the "Brownfield and Contaminated Site Remediation Act" (P.L. 1997, c.278 ) established the New Jersey Brownfields Redevelopment Task Force. The NJ Brownfields Redevelopment Task Force is served and managed by the Brownfields Program in the Office for Planning Advocacy.

**Government Publication Date: Mar 24, 2022**

**Brownfield Development Areas Polygons:**

BFLD DEV

A list of Brownfield Development Areas (BDAs) in New Jersey. A brownfield is any former or current commercial or industrial site that is currently vacant or underutilized and on which there has been, or there is suspected to have been, a discharge of contamination. Under the BDA approach, New Jersey Department of Environmental Protection (NJDEP) works with selected communities affected by multiple brownfields to design and implement remediation and reuse plans for these properties simultaneously. This data set is made available by the New Jersey Department of Environmental Protection Bureau of GIS.

**Government Publication Date: Feb 14, 2022**

**Voluntary Cleanup Program Sites:**

VCP

The New Jersey Department of Environmental Protection (NJDEP)'s Voluntary Cleanup Program (VCP) was eliminated when the Site Remediation Reform Act was signed into law on May 7, 2009.

**Government Publication Date: May 7, 2009**

## **Tribal**

### **Leaking Underground Storage Tanks on Indian Lands:**

Leaking Underground Storage Tanks (LUSTs) in Region 2. There are no LUST records in New Jersey at this time.

**Government Publication Date: Jan 28, 2016**

INDIAN LUST

### **Underground Storage Tanks (USTs) on Indian Lands:**

Underground Storage Tanks (USTs) in Region 2. There are no UST records in New Jersey at this time.

**Government Publication Date: Apr 4, 2016**

INDIAN UST

### **Delisted Tribal Leaking Storage Tanks:**

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

**Government Publication Date: Jan 31, 2022**

DELISTED ILST

### **Delisted Tribal Underground Storage Tanks:**

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

**Government Publication Date: Oct 13, 2021**

DELISTED IUST

## **County**

**No County databases were selected to be included in the search.**

## **Additional Environmental Record Sources**

### **Federal**

#### **Facility Registry Service/Facility Index:**

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Nov 2, 2020**

FINDS/FRS

#### **Toxics Release Inventory (TRI) Program:**

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

**Government Publication Date: Aug 24, 2021**

TRIS

#### **Perfluorinated Alkyl Substances (PFAS) Releases:**

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

**Government Publication Date: Aug 24, 2021**

PFAS TRI

#### **PFOA/PFOS Contaminated Sites:**

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

**Government Publication Date: Apr 15, 2022**

PFAS NPL

#### **Perfluorinated Alkyl Substances (PFAS) Water Quality:**

PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

**Government Publication Date:** Jul 20, 2020

**SSEHRI PFAS Contamination Sites:**

PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations <https://pfasproject.com/pfas-contamination-site-tracker/>

**Government Publication Date:** Dec 12, 2019

**National Response Center PFAS Spills:**

ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

**Government Publication Date:** Feb 23, 2022

**Hazardous Materials Information Reporting System:**

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

**Government Publication Date:** Sep 1, 2020

**National Clandestine Drug Labs:**

NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

**Government Publication Date:** Nov 22, 2021

**Toxic Substances Control Act:**

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

**Government Publication Date:** Apr 11, 2019

**Hist TSCA:**

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

**Government Publication Date:** Dec 31, 2006

**FTTS Administrative Case Listing:**

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**FTTS Inspection Case Listing:**

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**Potentially Responsible Parties List:**

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

**Government Publication Date:** Mar 30, 2022

**State Coalition for Remediation of Drycleaners Listing:**

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRCD no longer maintains this data, refer to applicable state source data where available.

**Government Publication Date:** Nov 08, 2017

**Integrated Compliance Information System (ICIS):**

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

**Government Publication Date:** Apr 30, 2022

**Drycleaner Facilities:**

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date:** May 5, 2021

**Delisted Drycleaner Facilities:**

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date:** May 5, 2021

**Formerly Used Defense Sites:**

[FUDES](#)

Formerly Used Defense Sites (FUDES) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

**Government Publication Date:** May 26, 2021

**Former Military Nike Missile Sites:**

[FORMER NIKE](#)

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

**Government Publication Date:** Dec 2, 1984

**PHMSA Pipeline Safety Flagged Incidents:**

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

**Government Publication Date:** Jul 7, 2020

**Material Licensing Tracking System (MLTS):**

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Government Publication Date: May 11, 2021**

**Historic Material Licensing Tracking System (MLTS) sites:**

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

**Government Publication Date: Jan 31, 2010**

**Mines Master Index File:**

[MINES](#)

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

**Government Publication Date: Feb 1, 2022**

**Surface Mining Control and Reclamation Act Sites:**

[SMCRA](#)

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

**Government Publication Date: Dec 18, 2020**

**Mineral Resource Data System:**

[MRDS](#)

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

**Government Publication Date: Mar 15, 2016**

**Uranium Mill Tailings Radiation Control Act Sites:**

[URANIUM](#)

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

**Government Publication Date: Mar 4, 2017**

**Alternative Fueling Stations:**

[ALT FUELS](#)

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

**Government Publication Date: May 16, 2022**

**Superfunds Consent Decrees:**

[CONSENT DECREES](#)

A list of Superfund consent decrees made available by the Department of Justice, Environment & Natural Resources Division (ENRD).

**Government Publication Date: May 18, 2022**

**Air Facility System:**

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

**Government Publication Date: Oct 17, 2014**

**Registered Pesticide Establishments:**

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

**Government Publication Date: Mar 30, 2022**

**Polychlorinated Biphenyl (PCB) Transformers:**

PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

**Government Publication Date: Oct 15, 2019**

**Polychlorinated Biphenyl (PCB) Notifiers:**

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

**Government Publication Date: Jan 20, 2022**

**State**

**Hazardous Material Incident database:**

SPILLS

Hazardous Material Incident database. Incidents reported to the Department of Environmental Protection's Environmental Action Line.

**Government Publication Date: Mar 8, 2022**

**Historic Incidents:**

HIS SPILL

Pre-2003 Spill incident records. This is no longer maintained or updated by the New Jersey Department of Environmental Protection (DEP).

**Government Publication Date: Dec 1, 2002**

**Data Miner Sites:**

ALL SITES

A list of facilities and sites of environmental interest included in the New Jersey Department of Environmental Protection (NJDEP) Data Miner database. NJ Data Miner is compilation of data from various programs, and includes Air Quality Permitting and Reporting, Compliance and Enforcement, Hazardous Waste Manifest, Incidents and Complaints, Radon, and others.

**Government Publication Date: Mar 11, 2022**

**Chromate Waste Sites:**

CHROMATE

List of sites within New Jersey where chromate contamination of soil or ground water has been identified. This list of chromate waste sites includes sites where remediation is either currently under way, required but not yet initiated or has been completed. The information is obtained from data submissions produced by the various remedial programs within NJDEP using information supplied by the party responsible for the site

**Government Publication Date: Jun 2013**

**Dry Cleaning Facilities:**

DRYCLEANERS

A list of registered drycleaners. This list is made available by the Department of Environmental Protection.

**Government Publication Date: Feb 25, 2022**

**Delisted Drycleaning Facility List:**

DELISTED DRYCLEANERS

A list of sites which were once dry cleaning facilities registered with New Jersey Department of Environmental Protection but are no longer used as dry cleaning facilities.

**Government Publication Date: Feb 25, 2022**

**Per- and Polyfluoroalkyl Substances (PFAS):**

PFAS

A list of incidents reported to the Department of Environmental Protection's Environmental Action Line, where one or more of the substances are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Mar 8, 2022**

**Industrial Site Recovery Act Database:**

ISRA

A list of Industrial Site Recovery Act (ISRA) cases made available by the New Jersey Department of Environmental Protection. The Industrial Site Recovery Act (ISRA) requires owners of facilities with specific industrial classifications to investigate and remediate prior to property transfers when the business ceases operations or is sold.

**Government Publication Date: May 4, 2022**

**Pollutant Discharge Elimination System:**

[PDES](#)

New Jersey Pollutant Discharge Elimination System (NJPDES) surface water discharge pipe GIS point coverage compiled from GPSed locations, NJPDES databases, and permit applications. This coverage contains the surface water discharge points and the receiving waters coordinates for the active as well as terminated pipes.

**Government Publication Date: Jun 13, 2022**

**New Jersey Environmental Management System (NJEMS) Sites:**

[NJEMS](#)

New Jersey Environmental Management System (NJEMS) Sites are regulated by NJ Department of Environmental Protection (NJDEP) under one or more regulatory permitting or enforcement programs, or sites that are otherwise of some interest to the NJDEP program. This database is published by NJDEP.

**Government Publication Date: May 26, 2022**

**Tribal**

**No Tribal additional environmental record sources available for this State.**

**County**

**No County additional environmental record sources available for this State.**

DRAFT

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

**APPENDIX C-2: Regulatory  
Records - General Public  
Records**

**REMEDIAL TIMEFRAME NOTIFICATION FORM**

- Extension Request
- Lengthen Remedial Investigation Report (RIR) Timeframe Notification
- Contaminated Media Notification

Date Stamp  
 (For Department use only)

**SECTION A. SITE NAME AND LOCATION**

Site Name: iPark Edgewater, LLC

List all AKAs: Uniliver Research & Development Inc; Conopco Inc

Street Address: 45 River Road

Municipality: Edgewater (Township, Borough or City)

County: Bergen Zip Code: 07020

Program Interest (PI) Number(s): 015891

Case Tracking Number(s) for this submission: RPC120001; E20030062; 10-07-29-1548-59

**SECTION B. NJDEP CASE MANAGER**

Do you have an assigned Case Manager?  Yes  No

If "Yes," please list the Case Manager: Arturo Romua

**SECTION C. EXTENSION REQUEST**

(Complete this section only if you are filing an extension request)

An extension is requested to the regulatory timeframe pursuant to NJAC 7:26C-3.2(b) or the mandatory or site-specific timeframe pursuant to NJAC 7:26C-3.5 as follows:

Report Type	Current Regulatory Timeframe	Proposed Regulatory Timeframe**	Current Mandatory or Expedited Site-Specific Timeframe	Proposed Mandatory or Expedited Site Specific Timeframe
Initial Receptor Evaluation*				
Preliminary Assessment Report*				
Site Investigation Report*				
Remedial Investigation Report*				
Remedial Action Report*	05/06/2022	05/06/2024	05/06/2022	05/06/2024
LNAPL Interim Remedial Measures Report*				
Immediate Environmental Concern Engineered System Response Action Report				
Immediate Environmental Concern Source Control Report*				
Other (write in):				
Other (write in):				
Other (write in):				

\* This report has a mandatory remediation timeframe

\*\* This date cannot exceed the mandatory remediation timeframe.

**Note:** Extensions to the regulatory timeframe are deemed approved provided the requirements of N.J.A.C. 7:26C-3.2(b) are met. If these requirements are not met, the NJDEP will notify the requestor in writing the extension is denied.

**Justification for Extension**

1. Describe the cause or causes of the need for additional time to complete the work:

Evaluation of remedial actions was extended due to an emerging contaminants evaluation. Access to the Site has been limited due to Site redevelopment work. Additionally, coordination with another agency (EPA) has delayed investigation plans. Also, a Soil-RAP and GW-RAP are proposed. Additional time will be required for third party negotiations and to allow NJDEP to review the RAR and RAPs and the Responsible Party to respond and address any administrative comments on the RAR and RAPs

2. Describe in detail the steps taken to minimize the additional time needed to complete the work:

(For any site where access is a cause of the need for additional time to complete the work, detail the steps taken to obtain access)

Investigation plans have been submitted to EPA, and the EPA has requested revisions and updates. The plans are still being negotiated with EPA.

3. Additional information:

In addition, extenuating circumstances created by the COVID-19 pandemic that were beyond the Responsible Party's control created disruption and delays in the project implementation.

**SECTION D. CONTAMINATED MEDIA NOTIFICATION (to Adjust RI/RA Regulatory Timeframes)**

(Complete this section only when notifying the NJDEP of the discovery of contamination in any media other than soil.)

Contamination was discovered in:

- Ground Water      Date: \_\_\_\_\_
- Sediment            Date: \_\_\_\_\_
- Surface Water      Date: \_\_\_\_\_

For sites not subject to N.J.S.A. 58:10C-27 wherein the remedial investigation must be completed by May 7, 2014, checking any box will increase the regulatory timeframe to complete the remedial investigation and remedial action from 3 years to 5 years and requires the Annual Remediation Fee Form be updated via the NJ Portal pursuant to N.J.A.C 7:26C-4.3(e).

**SECTION E. LENGTHEN RIR TIMEFRAME NOTIFICATION**

(Complete this section only if you are lengthening the Remedial Investigation Report Regulatory Timeframe)

1. Is the request for an Industrial Establishment subject to ISRA? .....  Yes     No

2. Indicate the number of additional years requested beyond the initial Remedial Investigation Report Regulatory Timeframe due date.    Number of Years: \_\_\_\_\_ (Maximum of 4 years)

3. The initial Remedial Investigation Report Regulatory Timeframe Due Date: ..... \_\_\_\_\_

4. The revised Remedial Investigation Report Regulatory Timeframe Due Date: ..... \_\_\_\_\_

5. Justification (check all that apply)

- Access to real property not owned or controlled by the person responsible for conducting the remediation is required, or contamination has impacted an environmentally sensitive natural resource, as defined in N.J.A.C. 7:26E-1.8.
- Ground water contamination exists in a consolidated aquifer or a dense non-aqueous phase liquid exists in ground water.
- Ground water contamination exists in more than one aquifer or there are two or more distinct ground water contaminant plumes.
- The person responsible for conducting the remediation wants a final remediation document for the entire site, the discharge was not discovered prior to May 7, 1999, and the site does not include an industrial establishment that the owner or operator are required to remediate pursuant to the Industrial Site Recovery Act, N.J.S.A. 13:1K-6 et seq., and the Industrial Site Recovery Act rules, N.J.A.C. 7:26B.

**SECTION F. LICENSED SITE REMEDIATION PROFESSIONAL INFORMATION AND STATEMENT**

LSRP ID Number: 507776

First Name: David Last Name: Thompson

Phone Numbers: (908) 685-7847 Ext.: \_\_\_\_\_ Fax: (908) 253-3295

Mailing Address: 1 Harvard Way, Suite 5

Municipality: Hillsborough State: NJ Zip Code: 08844

Email Address: david.thompson@arcadis.com

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

(1) I certify, as a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C-1 et seq. to conduct business in New Jersey, that for the remediation described in this submission, and all attachments included in this submission, I personally: Managed, supervised, or performed the remediation conducted at this site that is described in this submission, and all attachments included in this submission; and/or periodically reviewed and evaluated the work performed by other persons that forms the basis for the information in this submission; and/or completed the work of another site remediation professional, licensed or not, after having: (1) reviewed all available documentation on which I relied; (2) conducted a site visit and observed the then-current conditions and verified the status of as much of the work as was reasonably observable; and (3) concluded, in the exercise of my independent professional judgment, that there was sufficient information upon which to complete any additional phase of remediation and prepare workplans and reports related thereto.

(2) I certify:

- That I have read this submission and all attachments to this submission;
- That in performing the professional services as the licensed site remediation professional for the entire site or each area of concern, I adhered to the professional conduct standards and requirements governing licensed site remediation professionals provided in N.J.S.A. 58:10C-16;
- That the remediation conducted at the entire site or each area of concern, that is described in this submission and all attachments to this submission, was conducted pursuant to and in compliance with the remediation requirements in N.J.S.A. 58:10C-14.c;
- That the remediation described in this submission, and all attachments to this submission, was conducted pursuant to and in compliance with the regulations of the Site Remediation Professional Licensing Board at N.J.A.C. 7:26I; and
- That the information contained in this submission and all attachments to this submission is true, accurate, and complete.

(3) I certify, when this submission includes a response action outcome, that the entire site or each area of concern has been remediated in compliance with all applicable statutes, rules, and regulations and is protective of public health and safety and the environment.

(4) I certify that no other person is authorized or able to use any password, encryption method, or electronic signature that the Board or the Department have provided to me.

(5) I certify that I understand and acknowledge that:

- If I knowingly make a false statement, representation, or certification in any document or information I submit to the Department I may be subject to civil and administrative enforcement pursuant to N.J.S.A. 58:10C-17.a.1(a) through (f) by the Board, including but not limited to license suspension, revocation, or denial of renewal; and
- If I purposely, knowingly, or recklessly make a false statement, representation, or certification in any application, form, record, document or other information submitted to the Department or required to be maintained pursuant to the Site Remediation Reform Act, I shall be guilty, upon conviction, of a crime of the third degree and shall, notwithstanding the provisions of subsection b. of N.J.S.2C:43-3, be subject to a fine of not less than \$5,000 nor more than \$75,000 per day of violation, or by imprisonment, or both.

(6) I certify that I have read this certification prior to signing, certifying, and making this submission.

**SECTION G. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION**

Full Legal Name of the Person Responsible for Conducting the Remediation: iPark Edgewater, LLC

Representative First Name: Joseph Representative Last Name: Cotter

Title: President

Phone Number: (203) 661-0055 Ext.: \_\_\_\_\_ FAX: \_\_\_\_\_

Mailing Address: 485 West Putnam Avenue

Municipality: Greenwich State: CT Zip code: 06830

Email Address: jcotter@nationalresources.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

*I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.*

**REMEDIAL TIMEFRAME NOTIFICATION FORM**

- Extension Request
- Lengthen Remedial Investigation Report (RIR) Timeframe Notification
- Contaminated Media Notification

Date Stamp  
 (For Department use only)

**SECTION A. SITE NAME AND LOCATION**

Site Name: iPark Edgewater, LLC

List all AKAs: Uniliver Research & Development Inc; Conopco Inc

Street Address: 45 River Road

Municipality: Edgewater (Township, Borough or City)

County: Bergen Zip Code: 07020

Program Interest (PI) Number(s): 015891

Case Tracking Number(s) for this submission: RPC120001; E20030062; 10-07-29-1548-59

**SECTION B. NJDEP CASE MANAGER**

Do you have an assigned Case Manager? .....  Yes  No

If "Yes," please list the Case Manager: Arturo Romua

**SECTION C. EXTENSION REQUEST**

*(Complete this section only if you are filing an extension request)*

An extension is requested to the regulatory timeframe pursuant to NJAC 7:26C-3.2(b) or the mandatory or site-specific timeframe pursuant to NJAC 7:26C-3.5 as follows:

Report Type	Current Regulatory Timeframe	Proposed Regulatory Timeframe**	Current Mandatory or Expedited Site-Specific Timeframe	Proposed Mandatory or Expedited Site Specific Timeframe
Initial Receptor Evaluation*				
Preliminary Assessment Report*				
Site Investigation Report*				
Remedial Investigation Report*				
Remedial Action Report*	05/06/2022	05/06/2024	05/06/2022	05/06/2024
LNAPL Interim Remedial Measures Report*				
Immediate Environmental Concern Engineered System Response Action Report				
Immediate Environmental Concern Source Control Report*				
Other (write in):				
Other (write in):				
Other (write in):				

\* This report has a mandatory remediation timeframe

\*\* This date cannot exceed the mandatory remediation timeframe.

**Note:** Extensions to the regulatory timeframe are deemed approved provided the requirements of N.J.A.C. 7:26C-3.2(b) are met. If these requirements are not met, the NJDEP will notify the requestor in writing the extension is denied.

**Justification for Extension**

1. Describe the cause or causes of the need for additional time to complete the work:

Evaluation of remedial actions was extended due to an emerging contaminants evaluation. Access to the Site has been limited due to Site redevelopment work. Additionally, coordination with another agency (EPA) has delayed investigation plans. Also, a Soil-RAP and GW-RAP are proposed. Additional time will be required for third party negotiations and to allow NJDEP to review the RAR and RAPs and the Responsible Party to respond and address any administrative comments on the RAR and RAPs

2. Describe in detail the steps taken to minimize the additional time needed to complete the work:

(For any site where access is a cause of the need for additional time to complete the work, detail the steps taken to obtain access)

Investigation plans have been submitted to EPA, and the EPA has requested revisions and updates. The plans are still being negotiated with EPA.

3. Additional information:

In addition, extenuating circumstances created by the COVID-19 pandemic that were beyond the Responsible Party's control created disruption and delays in the project implementation.

**SECTION D. CONTAMINATED MEDIA NOTIFICATION (to Adjust RI/RA Regulatory Timeframes)**

(Complete this section only when notifying the NJDEP of the discovery of contamination in any media other than soil.)

Contamination was discovered in:

- Ground Water      Date: \_\_\_\_\_
- Sediment            Date: \_\_\_\_\_
- Surface Water      Date: \_\_\_\_\_

For sites not subject to N.J.S.A. 58:10C-27 wherein the remedial investigation must be completed by May 7, 2014, checking any box will increase the regulatory timeframe to complete the remedial investigation and remedial action from 3 years to 5 years and requires the Annual Remediation Fee Form be updated via the NJ Portal pursuant to N.J.A.C 7:26C-4.3(e).

**SECTION E. LENGTHEN RIR TIMEFRAME NOTIFICATION**

(Complete this section only if you are lengthening the Remedial Investigation Report Regulatory Timeframe)

1. Is the request for an Industrial Establishment subject to ISRA? .....  Yes     No

2. Indicate the number of additional years requested beyond the initial Remedial Investigation Report Regulatory Timeframe due date.    Number of Years: \_\_\_\_\_ (Maximum of 4 years)

3. The initial Remedial Investigation Report Regulatory Timeframe Due Date: ..... \_\_\_\_\_

4. The revised Remedial Investigation Report Regulatory Timeframe Due Date: ..... \_\_\_\_\_

5. Justification (check all that apply)

- Access to real property not owned or controlled by the person responsible for conducting the remediation is required, or contamination has impacted an environmentally sensitive natural resource, as defined in N.J.A.C. 7:26E-1.8.
- Ground water contamination exists in a consolidated aquifer or a dense non-aqueous phase liquid exists in ground water.
- Ground water contamination exists in more than one aquifer or there are two or more distinct ground water contaminant plumes.
- The person responsible for conducting the remediation wants a final remediation document for the entire site, the discharge was not discovered prior to May 7, 1999, and the site does not include an industrial establishment that the owner or operator are required to remediate pursuant to the Industrial Site Recovery Act, N.J.S.A. 13:1K-6 et seq., and the Industrial Site Recovery Act rules, N.J.A.C. 7:26B.

Dear Mr. Joseph Cotter:

On March 2, 2022, the Department received your "Remedial Timeframe Notification Form" requesting an extension to a mandatory time frame (MTF). The Administrative Requirements for the Remediation of Contaminated Sites (ARRCS) rules at N.J.A.C. 7:26C-3.3 and 3.5 list the requirements which must be met for approval of an MTF extension requests upon submission to the Department. Those rules also indicate that the Department may deny an extension request.

The Department has considered your request and hereby approves the extension for the submittal of the Remedial Action MTF to **May 6, 2024**.

Should you have any questions please contact Case Manager, Arturo Romua, at [Arturo.Romua@dep.nj.gov](mailto:Arturo.Romua@dep.nj.gov).

Sincerely,

  
Stephen E. Maybury, Bureau Chief  
Bureau of Case Management

## 1.0 INTRODUCTION

GZA GeoEnvironmental, Inc. (GZA) has prepared this Remedial Action Report for Remedial Action Areas 1, 2 and 5 (the RAR) for a portion of the i.Park Edgewater Property located at 45 River Road in Edgewater, Bergen County, New Jersey (**Figure 1**). For clarity, the term “Property” will be used herein to refer to the entire Property located at 45 River Road, and the term “Site” will be used to refer to the portion of the Property which is the subject of this document (Remedial Action Areas 1, 2 and 5).

The Property has been divided into six Remedial Action Areas (RAAs) (see **Figure 2**). RAA-1 is the area known as the Main Street Development and is located in the northeast section of the Property. RAA-1 is bordered by all five other RAAs. RAA-2 is located to the south of RAA-1 and constitutes the central portion of the Property, including buildings E1 and E2 as well as a proposed parking garage and retail space. RAA-3 is located in the western part of the Property and contains the Police Station/Borough Hall (PS/BH), the CVS, and Building K; remedial actions were previously completed for RAA-3. RAA-4 is located to the southeast and is the riverfront portion of the Property. RAA-5 is the northern Quanta Resources Superfund Site (Quanta)-impacted portion of the Site. RAA-6 encompasses the Hudson River sediments east of the Property.

This report summarizes the remedial efforts conducted on RAA-1, RAA-2 and RAA-5 portions of the Property, as depicted on **Figure 2**, between September 2010 and May 2011. This report includes the Delineation and Data-Gap Investigation Report proposed in the Remedial Action Work Plan for RAA-1 and RAA-2 as **Appendix A**.

The RAR has been prepared in accordance with the guidelines outlined in the NJDEP Technical Requirements for Site Remediation (N.J.A.C. 7:26E). As such, this RAR includes: a summary of the remedial investigations completed to date; a description of the remedial action implemented; tables and figures documenting the completion of the remedial action; a summary of costs; copies of supporting documentation (including permits, manifests, and other relevant documents); the status of remedial actions that will be completed as part of Site construction, as well as remedial actions that will take place on the remainder of the Property that have bearing on the Site; and recommendations. The remainder of the introduction presents a brief background and site description.

### 1.1 BACKGROUND SUMMARY

The objective of the remedial action (RA) was to address both surficial and subsurface soils impacted by historic fill material, soft pitch (which impacts groundwater quality), and arsenic at the Site, as described in the following documents:

- *Remedial Action Workplan Remedial Action Area 1*, and *Remedial Action Workplan Remedial Action Area 2*, both dated February 2010;

- *Addendum to Remedial Action Work Plan RAA-1 and -2 Letter*, dated May 11, 2010, and approved by the New Jersey Department of Environmental Protection (NJDEP) on May 18, 2010;
- *Remedial Action Workplan Remedial Action Area 5*, dated March 2010 and approved by the NJDEP on October 27, 2010; and,
- The *Data Gap and Delineation Data Report* dated August 2011 and included as an Appendix to this Report.

The remedial actions selected to address the on-Site impacts included: the excavation of soils containing soft pitch; the excavation of soils with over 10 parts per million (ppm) of polychlorinated biphenyls (PCB); the excavation of soils characterized by concentrations greater than 600 ppm of arsenic; and the implementation of engineered and institutional controls (i.e., capping, deed notice, and a classification exception area). All excavated soils were disposed of off-Site.

## 1.2 SITE DESCRIPTION

The Site is part of the Property owned by i.park Edgewater, LLC, at 45 River Road in Edgewater, Bergen County, New Jersey. The Site is located in the northeast section of the Property, on portions designated as Block 97 and 98 in the Borough of Edgewater (**Figure 1**). The Property was formerly the location of Unilever's Research and Development facility, and is currently in the process of redevelopment for mixed use residential and commercial purposes.

The Site and Property history below was developed from the following sources:

- *Preliminary Site Assessment Report*, prepared by Langan Engineering and Environmental Services, Inc., dated April 2003;
- *Aerial Photographic Analysis of Quanta Resources Superfund Site, Edgewater Borough, New Jersey*, prepared by the United States Environmental Protection Agency (USEPA), September 2006;
- Sanborn Maps from the years 1887, 1911, 1930, 1950, and 1968, prepared by The Sanborn Library, LLC;
- Aerial photographs for the years 1947, 1959, 1970 and 1986, obtained from Robinson Aerial Surveys, Inc.; and
- Lease agreement between Fredrick G. Holst and the Barrett Division, Allied Chemical & Dye Corporation, dated December 1, 1943.

## 1.3 SITE HISTORY

The Property was purchased from Conopco, Inc., d/b/a Unilever Research and Development (Unilever), by i.Park in August 2004. Under the purchase agreement, i.Park is responsible for the remediation of soil and groundwater contamination due to past operations at the Property, and has entered into a remediation agreement with the

NJDEP in accordance with the regulations implementing the Industrial Site Recovery Act (ISRA).

A Preliminary Assessment Report (PAR) and four Site Investigation Reports (SIRs) have previously been submitted to the NJDEP by Langan Engineering, Inc. (Langan) pursuant to ISRA Case #E20030062. In a letter dated February 24, 2005, the NJDEP updated a comment letter dated April 6, 2004 regarding the earlier submissions of the PAR and three SIRs which included the issuance of “no further action” determinations for both soil and groundwater for many of the identified areas of concern (AOCs). In addition, the NJDEP has concurred that the Site is underlain by Historic Fill Material (HFM), meeting the definition found in the *Technical Requirements for Site Remediation* (TRSR) N.J.A.C. 7:26E. However, the NJDEP also raised certain requests for clarification and additional information within the April 6, 2004 correspondence. . In addition, i.Park further received additional comments from the NJDEP dated February 24, 2005 concerning Part 4 of the SIR and the Langan response to previous NJDEP comments.

GZA issued a *Remedial Investigation Report/Remedial Action Work Plan* (RIR/RAWP) for the Site in January 2006, and the NJDEP responded with a comment letter dated June 30, 2006, which included the issuance of additional “no further action” determinations for some of the outstanding AOCs as well as requests for additional investigation. GZA prepared a response letter dated September 28, 2006 addressing some of NJDEP’s questions and requesting additional “no further action determinations” for additional AOCs. GZA also outlined additional remedial investigation activities to be undertaken to address the remaining AOCs at the Site; these were conducted in the summers of 2006 and 2007 and are described in the SRIR/RAWP, dated November 2007. On April 30, 2008, i.Park met with the NJDEP to discuss a remedial approach for the Property that would be acceptable to the NJDEP. As a result of that meeting, i.Park prepared the RAWP outlining the proposed remedial activities for the Site, which included soil impact delineation, the excavation of contaminated soils, the capping of remaining soils at the Site, and deed notices.

The Remedial Action Work Plans for RAA-1 and RAA-2 were approved by the NJDEP on May 18, 2010, and the RAWP for RAA-5 was approved on October 26, 2010.

## **1.4 PHYSICAL SETTING**

### **1.4.1 Site Description**

The Site lies east of the Palisades Sill along the Hudson River waterfront. This area was part of the Hudson River flood plain and tidal mudflat. The Site was built upon and expanded by successive application of fill material. The termination of the fill material along the Hudson River is marked by aggregate (rip-rap), bulkhead barriers,

and piers. The fill material at the Site is a highly heterogeneous mix of natural and man-made material.

The Site is located in the northeast section of the Property situated on portions of Block 97 and 98 in the Borough of Edgewater. The Property is bounded by the Hudson River to the east, an undeveloped Property to the south, relocated River Road to the west, and the 115 River Road, LLC Property to the north. Land use in the vicinity of the Site is a mix of residential, industrial and commercial uses. The ongoing redevelopment of the Hudson River waterfront in Edgewater has shifted the predominant land use from industrial to a mix of residential and commercial.

#### **1.4.2 Topography**

Edgewater is located in the southern portion of Bergen County and falls within the Piedmont Physiographic Province, which lies east of the Ramapo River Valley. This physiographic province is characterized by gently sloping and rolling topography including less rugged hills (as compared to the northwest portion of the county) that are generally elongated in a northeast to southwest direction. The Palisades abruptly rise to elevations of approximately 150 to 200 feet above mean sea level (MSL) approximately 400 feet west of the Site. Based on a review of the U.S. Geologic Survey Quadrangle Map, Central Park, N.Y.-N.J., 1995, elevations on and within the vicinity of the Site are approximately 15 feet above MSL. The Site topography is relatively low-lying and slopes gently east to the Hudson River.

#### **1.4.3 Soils**

Bedrock is encountered at depths of 57 to 87.5 feet below ground surface (bgs) at the Property. Overlying the bedrock are Quaternary age unconsolidated deposits of stratified and unstratified drift deposited by the Wisconsin Glacier. These deposits are typically thickest in valleys and low-lying areas and thinnest on steep slopes and on the tops of ridges. At the ground surface, Holocene sediments, the most recent deposits in Bergen County, consist of stream alluvium, freshwater marsh and swamp deposits, and tidal marsh sediments.

The Soil Survey of Bergen County, New Jersey has identified the surficial soils in the vicinity of the Site as UR – Urban Land. These soils exhibit slopes of one to five percent. Typically these soils have been cut, filled and reworked. Fill material at the Property overlies native sediments derived from lacustrine fan, delta and marsh environments consisting of clastic sediments and organic rich silts and clays, respectively. In general, the unconsolidated lacustrine fan-delta deposits pinch out near the bedrock high and appear to dip and thicken to the east-southeast. Channel deposits of sands and gravels, associated with paleo-surface water drainage, may have locally incised into lower units while silts and clays associated with over-bank deposits would cover broad areas.

#### 1.4.4 Hydrostratigraphic Units and Groundwater Flow

Groundwater on the Property occurs within the pore space of the unconsolidated fill and natural soils, and in bedrock fractures. The regional groundwater recharge zone is predominantly to the west, in upland areas, along the Palisades. Four hydrostratigraphic (groundwater bearing) units have been identified. From the ground surface down, the hydrostratigraphic units are as follows: 1) fill material, 2) clay/silt, 3) native sand (localized), and 4) bedrock. The uppermost zone consists of approximately 5 to 24 feet of fill with the hydraulic conductivity (K) estimated to range between approximately 3 to greater than 100 feet per day (ft/day; CH2M Hill, 2007, and GZA, 2007). The uppermost zone is underlain by a lower permeability organic-silt layer approximately 30 to 60 feet thick. The hydraulic conductivity of the silts and clays has been estimated to be approximately 0.001 ft/day (CH2MHill, 2006), and this unit is considered to be an imperfect aquitard. The contrast in hydraulic conductivities would indicate that advective transport occurs predominantly in the fill material.

Two broadly deposited sands units, described as shallow and deep native sands, have also been identified at the Site (GZA, 2007, CH2M Hill, 2007) as groundwater bearing zones. The shallow native sand unit is present directly beneath the fill material (CH2M Hill, 2009) in the central and southern portion of the Quanta site and the northwestern portion of the 45 River Road Site. This area is considered to be a recharge area for the shallow sand unit and is under unconfined conditions at these locations due to the nature of the imperfections in the aquitard.

Closer to the shoreline, to the south and east, the shallow sand unit is separated from the overlying fill material by relatively lower K organic silts, clays and peat. It is anticipated that low K sediments limit the migration of pore water between the fill and the upper sand unit, and between the upper and lower sand units. The hydraulic head in the shallow sand unit near the shoreline is similar to that of the up-gradient portion of the site and may be under confined conditions. Groundwater in the deep sand unit is considered to be confined under the Site. The groundwater flow direction in the deep and shallow sand zones is generally to the east.

The water table varies from approximately 2 to 10 feet bgs at the Property. Groundwater flow is generally from west to east toward the Hudson River, although the flow direction has shown some variation where groundwater will travel parallel and away from the Hudson River. These variations are possibly due to subsurface heterogeneities in the fill material, paleo-stream beds, and different infiltration rates associated with impermeable surfaces vs. permeable surfaces. Groundwater recharge is expected to be especially significant at the base of the Palisades escarpment, approximately 400 feet west of the Property, where the amount of infiltration from runoff is expected to be relatively high.

### 1.4.5 Surface Water Bodies

The Hudson River bounds the Property to the east and flows south into New York Harbor. The Hudson River is topographically down-gradient of the Site and receives both groundwater discharge and surface water runoff from the Property. The Hudson River is a major navigable waterway that is also used for recreational purposes such as boating and fishing.

Tidal influence studies have been conducted at both the i.Park and Quanta Sites (Langan, 2003 and CH2M Hill 2007). Tidal effects were observed in both the shallow fill material and the deeper native sands, although the zone of tidal influence appears to be relatively narrow (0.34 foot effect measured in a well located 50 lateral feet from the river, and little to no measurable effect in two wells located 420 and 550 lateral feet from the river). The deeper native sands are likely responding to tidal loading effects rather than direct pore space communication of waters. Qualitative tidal experiments show that the bulkheads are an impediment to tidal influence in shallow groundwater.

The only other surface water body in close proximity to the Property is a reservoir that is located in North Hudson Park, southwest of the Property and on top of the Palisades. This reservoir does not receive either groundwater discharge or surface water runoff from the Site.

## 2.0 SUMMARY OF ENVIRONMENTAL INVESTIGATION RESULTS

Prior to submission of the Remedial Action Work Plan, several phases of remedial investigation were conducted to identify the extent of site-related impacts. These investigations are summarized and reported in the November 2007 *Supplemental Remedial Investigation/Remedial Action Work Plan*. In addition, further delineation proposed in the 2010 RAWPs for RAAs 1 and 2 is presented in the August 2011 *Data Gap and Delineation Data Report (Appendix A)*. A follow-up letter entitled *Well Installation and Results Letter, RAA-2*, dated September 24, 2010, and outlined the results of a groundwater evaluation of several areas of pitch-impacted soils.

*SRIR/RAWP, November 2007*

Between 2001 and 2009, 185 soil borings, 48 monitoring wells, and 7 temporary well points were installed on the Site (**Figure 3**). Soil and groundwater samples collected from the borings, monitoring wells, and temporary well points were analyzed for a variety of parameters including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, total petroleum hydrocarbons (TPH), polychlorinated biphenyls (PCBs), cyanide, and phenols. The previous analytical results were used to set the extents of the proposed excavation locations shown in **Figure 4**.

The fill under the Site, which extends from land surface to the top of the native soils,

has been previously characterized as historic fill material (HFM) as defined in the TRSR N.J.A.C. 7:26E-1.8. HFM in New Jersey has been found to contain arsenic, beryllium, cadmium, lead, zinc, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, indeno(1,2,3-cd)pyrene, and dibenzo(a,h)pyrene at concentrations significantly above the NJDEP Soil Cleanup Criteria (SCC). Maximum concentrations of contaminants in HFM are provided in N.J.A.C. 7:26-4.6(b)6 Table 4.2. An NJDEP April 2007 notice of deficiency (NOD) letter stated that not all the fill material at the Site meets the definition of HFM as defined in the TRSR because the USEPA indicated pyritic ore was roasted to produce sulfuric acid on the nearby Quanta Property, and that waste from the process may be present in the Site fill. In addition, the NJDEP noted that much of the fill material at the Property contains pitch, which is a chemical production waste related to the historic operations of Barrett on the Property. Therefore, material containing pitch and material containing arsenic at concentrations greater than 600 ppm are not considered HFM. The remainder of fill material is considered HFM.

As discussed below, roofing pitch material is found in the southern section of the Site. Roofing pitch material associated with Barrett Industries will not be considered fill material and will be addressed through a non-presumptive remedy.

Laboratory analytical results for soil samples collected at the Site indicate the presence of polynuclear aromatic hydrocarbons (PAHs) and metals at concentrations above NJDEP Residential Direct Contact Soil Cleanup Criteria (RDCSCC). However, in soils not containing pitch, the concentrations of these contaminants were generally consistent with the HFM concentrations listed in the NJDEP TRSR.

*Supplemental Remedial Investigation Remedial Action Area 4 (Currently in preparation)*

Arcadis conducted an investigation of RAA-4 which, in addition to the investigation of RAA-4, included a discussion of supplemental groundwater investigations at the Site for the other RAAs. Additional monitoring wells were required and proposed in the RAWPs for RAA-1, RAA-2 and RAA-5 in order to make decisions regarding the need for further remediation and delineation of groundwater impacts.

The NJDEP stated that no further investigation of AOC 1e17 on the northeast corner of the Site (RAA-5) was acceptable in July 17, 2008, if a deeper sample was collected and analyzed for petroleum fingerprinting. In September 2008, CH2M Hill collected soil samples for total petroleum hydrocarbon fingerprinting and the results indicated weathered fuel oil in the area south of MW-106A. Coal tar impacts were observed north of MW-106A.

Groundwater samples were last collected from MW-106 and MW-106A in December 2008. Benzene was detected at 25.3 ug/L and 1,270 ug/L, respectively, and naphthalene was detected at 1.55 ug/L and 9,230 ug/L, respectively. Previous

groundwater samples collected from MW-106A in December 2005 and February 2006 detected 25 ug/L and 63 ug/L of benzene respectively. In May 2006, a groundwater sample collected from MW-106 contained 1.3 ug/L of benzene.

On November 30 and December 1, 2010, Arcadis installed four groundwater monitoring wells (MW-214, 215, 216, and 217) around MW-106A. No visual evidence of LNAPL was observed during the installation of the wells. However, within one week of completion, MW-214 and MW-215 were destroyed by construction associated with the Hegney Property located directly north of the utility easement. Wells MW-216 and MW-217 were gauged on January 19 and on March 9, 2011. Since Arcadis observed no LNAPL on the water table, no excavation was proposed in this area.

On December 1, 2010, Arcadis advanced a boring (SB-205) as proposed in the RAWP for RAA-5. Four soil samples were collected for arsenic at the intervals discussed in the RAWP. All soil sample results were below 600 ppm.

Three additional arsenic delineation monitoring wells and four additional pitch/benzene delineation wells were proposed for RAA-1 and RAA-2, respectively. These wells were installed and labeled PMW-9, PMW-10, PMW-14, PMW-17, PMW-19, and MW-213. A proposed well located on the west side of former Building 2 had not been installed at the time of this report. The groundwater sample results for these wells are to be discussed in the RAA-4 RIR, to be prepared by Arcadis. In addition, the results for the post-excavation monitoring wells (PMW) are discussed in **Section 4.5** below.

#### *Data Gap and Delineation Data Report, RAA-1 & RAA-2*

In the spring of 2010, GZA initiated the investigations proposed in the Remedial Action Work Plans for RAA-1 and -2. A total of 270 soil borings were advanced in RAA 1 and 2 to investigate several identified Site data gap areas and to delineate known areas of soil impacts. The locations of these borings are shown on **Figure 3**. The results of this investigation were used to further delineate the vertical and horizontal extents of groundwater impacted by pitch impacts and of soils impacted by arsenic at concentrations greater than 600 ppm. A copy of the complete Data Gap report is annexed as **Appendix A**.

As discussed in the *Data Gap and Delineation Data Report*, selected soil samples were field screened with a portable x-ray fluorescence meter (XRF) and confirmatory laboratory samples were collected to delineate the horizontal and vertical distribution of arsenic contaminated soils. A comparison of the laboratory and XRF derived arsenic concentrations was made. The R-squared value, also known as the coefficient of determination for this relationship, is 0.986, indicating that the correlation between the data sets is good.

During the advancement of the initial delineation borings and data gap borings, four samples were collected from each boring (a sample from 0-2 feet bgs, a sample from 0-6-inches above the water table, a samples from 0-6-inches above the native organic silts, and a sample from the cinder-rich layer) as directed by the NJDEP for the delineation of arsenic impacts. If field screening from a given interval was below 450 ppm, then a sample was collected for laboratory analysis. If the laboratory sample from a given interval was below 600 ppm, that interval was considered delineated. If a sampled soil interval contained arsenic above 600 ppm (laboratory analysis) or above 450 ppm (XRF analysis), then a “step out” boring was advanced approximately 10 feet from the previous location and samples were collected from the depth interval in which the arsenic concentration exceeded the criteria. This was repeated until all depth intervals passed the remedial criterion of 600 ppm.

Pitch and NAPL impacted areas were delineated based upon visual evidence of soft flowable pitch or LNAPL in borings. The results of the investigation indicated that:

- Four of the seven arsenic excavation areas in RAA-1 were successfully delineated;
- Three of the seven arsenic excavation areas in RAA-1 (B, E and H) required some additional delineation during excavation;
- LNAPL/NAPL/Pitch areas in RAA-1 were successfully delineated;
- one LNAPL/NAPL/Pitch area in RAA-1 was targeted for excavation;
- LNAPL/NAPL/Pitch areas in RAA-2 were successfully delineated; and
- two LNAPL/NAPL/Pitch areas in RAA-2 were targeted for excavation.

Additional groundwater investigation was proposed on three of the LNAPL/NAPL/Pitch areas in RAA-2 to evaluate whether excavation was required.

*September 24, 2010, RAA-2 Well Installation and Results Letter*

Based on the observations and results of the RAA-1 and RAA-2 investigations, discussed above, soft pitch was identified in soils at Geoprobe borings GZA-225 and GZA-236; at boring locations advanced in the vicinity of GZA-156; and at GZA-115/MW-63. The vertical and horizontal distribution of soft pitch in the subsurface was delineated in the immediate areas around GZA-225, GZA-236, and GZA-115. Soft pitch was observed between 14.2 and 14.8 feet bgs at GZA-225; between 1.7 and 2 feet bgs at GZA-236; and between 2-4 feet and again at 11.5 to 12 feet at GZA-115/MW-63. Soft pitch was observed at multiple depths (2.3 to 2.5, 5 to 6, and 10 to 15 feet bgs) in soils in the area near GZA-156, but pitch in this area could not be fully delineated due to physical Site constraints

In order to ascertain the impact of soft pitch on groundwater quality, GZA installed and sampled one groundwater monitoring well at each of the three RAA-2 soft pitch areas, MW-78, MW-79 and MW-80. The wells were all installed within 10 feet of the downgradient extent of the soft pitch area. Analytical results indicated that the soft roofing pitch material was not adversely affecting groundwater at GZA-225 or GZA-

236. As agreed to by the NJDEP, only the area around GZA-156 required excavation (MW-80, this would later become excavation L). The above monitoring wells were installed due to Borings GZA-156, GZA-225 (MW-78) and GZA-236 (MW-79) containing soft pitch. Monitoring wells were installed in these areas to confirm the presence of NAPL in the groundwater.

Groundwater samples collected from GZA-115/MW-63 also indicated no impacts to groundwater from soft pitch, and the occurrence of soft pitch in this portion of the Site is discontinuous and limited to thin isolated zones. Therefore, no excavation was required in this location.

In addition, an assessment of groundwater impacts at MW-51A and MW-132 was conducted. It was concluded that the dissolved phase contamination at MW-132 was associated with the Quanta Plume, and that no excavation was required in this area.

## **2.1 CHEMICALS OF CONCERN**

The following is a summary of the Chemicals of Concern (COCs) for each RAA located on the Site.

### RAA-1

Based on the investigations conducted to date, one VOC (benzene) has been detected in Site soils above the Impact to Groundwater (IGW) SCC at two areas, near SB-3 and GZA-21. These areas were vertically and horizontally delineated based on the results of previous investigations. The benzene detected in SB-3 is believed to be related to residual No. 6 fuel oil from the former fuel oil piping. The concentrations of benzene in GZA-21 did not require remediation, as there was no impact to groundwater as defined in the RAWP for RAA-1.

Arsenic is the primary metal of concern due to its presence in the groundwater at the Site, and accounts for most of the regulatory standard exceedances noted above. During the delineation investigation discussed above, the highest on-Site concentrations of arsenic were detected in this RAA. The highest reported concentration of arsenic in soil was 33,000 ppm at GZA-177.

Previous results indicated one area (SB-3) with PCB levels slightly above the NJDEP Non-Residential Direct Contact Soil Cleanup Criterion (NRDCSCC; 2.3 ppm vs. 2 ppm). This area is within the area that will be excavated due to high arsenic concentrations in the soil.

### RAA-2

Based on the previous investigations conducted to date, only one VOC (benzene) had been detected in Site soils at concentrations above the IGWSCC. This exceedance

was observed in the central portion of the Site near former Buildings 2 and 3.

Previous results indicated one area with PCBs in soils above the NJDEP Non-Residential Direct Contact Soil Cleanup Criteria (NRDCSCC) of 2 parts per million (ppm). This exceedance was also detected in the central portion of the Site, between Buildings 2 and 3. The PCBs were delineated north and west of MW-70.

PAHs have been detected above NJDEP RDCSCC and IGWSCC in the majority of soil samples collected and analyzed at the Site. The PAHs are associated with the historic fill material and roofing pitch material. As would be expected, PAH concentrations in samples containing roofing pitch material are higher than those in samples that do not contain roofing pitch material. Naphthalene has been identified in soils in two areas of the Site: in the central portion of the Site between former Buildings 2 and 3, and in the eastern portion of the Site around Monitoring Well MW-63.

Metals, including antimony, arsenic, beryllium, copper, lead, mercury, nickel, thallium, and zinc, have been detected above the NJDEP RDCSCC and IGWSCC in the fill material at the Site. Of these, arsenic is the primary metal of concern due to its presence in the groundwater at the Site and accounts for most of the regulatory standard exceedances noted above.

#### RAA-5

PAHs have been detected above NJDEP NRDCSCC in the majority of soil samples collected and analyzed from this portion of the Site. The PAHs are associated with the historic fill material and residual coal tar material.

Metals including antimony, arsenic, barium, lead, nickel and thallium have been detected above the NJDEP NRDCSCC in the fill material at the Site. Of these, arsenic is the primary metal of concern due to its presence in the groundwater at the Site and accounts for most of the regulatory standard exceedances noted above. A soil sample from the CH2M Hill boring SB-55 had a reported arsenic concentration of 7,040 ppm.

In addition, MW-7 was characterized by a thin layer of LNAPL and therefore was required to be excavated.

## **2.2 PREVIOUS GROUNDWATER ANALYTICAL TESTING RESULTS**

VOCs (particularly benzene, and to a lesser extent ethylbenzene and xylenes) have been documented in the groundwater beneath the Site at concentrations exceeding the NJDEP Groundwater Quality Criteria (GWQC). The areas of VOC exceedances generally correspond with the presence of soft roofing pitch material (associated with roofing pitch storage on the Site), No 6 oil (associated with historic releases on the Site), or the creosote (associated with the Quanta Resource Site). The area with the

highest dissolved benzene concentration is located to the south and east of Building 1 under the south visitor's parking lot (MW-44,).

The SVOCs naphthalene, bis(2-ethylhexyl)phthalate, 2,4-dimethylphenol, and phenol have been detected above their respective NJDEP GWQC. These compounds are found in samples from wells which contain residual roofing pitch material as a separate phase within the well, and their presence may be attributable to the roofing pitch material.

Inorganic constituents, including antimony, arsenic, cadmium, chromium, lead, mercury, and to a lesser extent aluminum, beryllium, iron, manganese, nickel, sodium, thallium and zinc, have been detected at concentrations exceeding the applicable GWQC. Exceedances of metals in the groundwater are found throughout the Site and are generally attributable to the fill material at the Site. The highest concentrations of arsenic in Site groundwater are generally found in the central regions of the Site and in the area around monitoring well MW-107.

### **2.3 PREVIOUS OBSERVATIONS OF ROOFING PITCH MATERIAL**

Generally, pitch is defined as any number of highly viscous liquids which are solid at room temperature and consist of a complex mixture of numerous, essentially aromatic hydrocarbons and heterocyclic compounds. Based on its softening point, which is the temperature at which the hard material becomes soft or viscous, pitch can be classified as hard, soft, or liquid. The softening point of a pitch can vary over a broad range depending on the molecular weight and composition of its constituents. Several types of roofing pitch material have been observed on the Property and have been defined based on their observed consistency at ambient temperature, which presumably reflects the softening point of the pitch. The classifications used in this report are defined as follows:

- *Hard pitch*- appears brittle at ambient temperature;
- *Soft pitch*- appears malleable at ambient temperature but would not be expected to flow and migrate with groundwater (if located beneath asphalt it may breach the pavement surface due to warming and density stratification); and
- *Liquid pitch*- observed to flow at ambient temperature.

Pitch has been documented within the fill material at several locations. The hard pitch is sporadic in some areas but is predominantly present between former Buildings 2, 3 and 6, south of Building 1, and south of former Buildings 2 and 32. Soft pitch is found around the northern portion of former Building 2 and west of former Building 2, west of former Building 22, in MW-63, south of Building 1 between GZA-245 and GZA-127 and between GZA-127 and GZA-156, and south of former Building 2 around MW-1.

On the southern portions of the Property, roofing pitch material associated with pitch bays used by Barrett has been observed in the subsurface soils. On the central portions of the Property, between former Building 4 and the main access road, pitch-like material has been observed only occasionally in trace amounts within the fill material. The northern portion of the Property, north of the main entrance road, was never used by Barrett for the storage of pitch and, according to the aerial photograph review, significant filling of this area did not occur around the time the pitch bays existed on Block 99. Based on this, the subsurface soils in the area to the north of the main entrance road meet the definition of HFM. Soft roofing pitch material associated with Barrett Industries has been observed within RAA-2.

During past investigations, the term “P/A material” was used to describe the occurrence of any material which exhibited the visual characteristics of pitch or asphalt. In many instances, construction and demolition (C&D) material, including roofing membranes and asphalt, were characterized as pitch. This material is no longer classified as pitch but as C&D material (fill).

### **3.0 ORDER OF MAGNITUDE ANALYSIS**

As requested by the NJDEP, GZA evaluated the order of magnitude of previous soil analytical results on the Site according to the NJDEP Order of Magnitude Guidance document. GZA compared eleven compounds listed under the Nonresidential Soil Cleanup Criterion. Several compounds were detected above the new NRDCSRS. However, only naphthalene (borings GZA-209A, GZA-221, GZA-222, GZA-223, GZA-224, GZA-237 GZA-237A, GZA-238, GZA239, GZA-23, GZA-21, GZA-30 and GZA-33), chloromethane and chloroform (borings GZA-223, GZA-224 and GZA-237) were detected one order of magnitude above the new NRDCSRS. However, the proposed and completed remedial actions address all direct contact issues through engineered and institutional controls in the form of a protective cap and deed notices, and therefore have been addressed. A summary of the Order of Magnitude Analysis is shown in **Table 1**.

### **4.0 REMEDIAL ACTION**

As outlined in the approved RAWPs for RAA-1, 2 and 5, the remedial objective for arsenic impacted soils was 600 ppm. Soils characterized by arsenic concentrations above 600 ppm were targeted for excavation and off-site disposal. Soils with less than 600 ppm were to be managed in place beneath a protective cap with a deed notice.

Groundwater remedies, other than excavation of source areas will be presented in the Remedial Action Work Plan for RAA-4.

The remediation standards for roofing pitch material and NAPL for the direct contact pathway are the RDCSCC. The remediation standards for the impact to groundwater pathway were as follows:

Delineation and removal of:

- Soft pitch or NAPL that accumulates in monitoring wells;
- Petroleum that is present as a NAPL in soil pore space or on the water table;
- Soft/flowable pitch observed in soil pore space or on the water table; and/or
- Soft pitch that is resulting in significant concentrations of benzene or naphthalene in groundwater, as determined by the NJDEP on an area by area basis.

As is typical of complex historic industrial properties, the various former operations at the Conopco Property involved the use, storage, and production of raw materials, finished products, hazardous wastes and petroleum products. The AOCs located on the Site and their respective proposed remedial actions are summarized below. Also below are Contaminants of concern on the Site and the proposed remedial actions.

<b>Area of Concern</b>	<b>Remedial Action</b>
Roofing pitch material	<ul style="list-style-type: none"> <li>• Excavation and off-site disposal of soils that contain pitch impacting groundwater;</li> <li>• Construction of an impermeable cap (asphalt or concrete) or 2 feet of clean fill in landscaped areas; and</li> <li>• Institutional controls for soil (i.e., deed notice).</li> </ul>
Fill material	<ul style="list-style-type: none"> <li>• Institutional controls for soil (i.e., deed notice); and</li> <li>• Construction of a cap (asphalt or concrete) across the majority of the Site and 2 feet of clean soil for landscaped areas.</li> </ul>
NAPL	<ul style="list-style-type: none"> <li>• Excavation of NAPL impacted soils associated with NAPL in soil pore space or on the water table.</li> </ul>

As discussed in this report, all excavation activities associated with the above AOCs were completed in the Fall of 2010. Engineered controls, such as caps and SSDS's are under construction and will be completed as part of the development process in phases.

The selected remedial approach involved a mixture of active remedial measures and restricted use remedial actions. The proposed remedy was a permanent remedy and consisted of the following elements:

- Excavation of areas of soils containing soft flowable roofing pitch material that significantly impacts groundwater, as discussed above;
- Construction of an impermeable cap (asphalt or concrete) across the majority of the Site. Approximately 90% of the Site will be covered with impermeable surfaces;
- Excavation of soils characterized by arsenic concentrations above the alternative remedial standard of 600 ppm;
- Removal of free product which accumulates in MW-7;

- Excavation of VOC-impacted soils associated with benzene concentrations greater than 10 ppm and naphthalene concentrations greater than 3,000 ppm;
- Installation of passive sub-slab ventilation systems and barriers capable of conversion to active systems under the proposed new buildings; and
- Institutional controls for soil (i.e., deed notice).

i.Park contracted D.A. Collins Companies (D.A. Collins) to complete the remedial action for Site soils; GZA observed this work. The remedial strategy included: excavation of 25,400 tons of soft pitch and arsenic impacted soil; off-Site disposal of soft pitch impacted soils; off-Site disposal of arsenic impacted soil exceeding the alternative remedial standard of 600 ppm; removal and off-Site disposal/recycling of subsurface piping, foundations and obstructions encountered; the collection, treatment, and discharge of an estimated 10,000 gallons of impacted groundwater generated during attempted construction dewatering; and capping of soils remaining on-Site characterized by contaminant concentrations below the remedial standards. In accordance with the requirement of a 14-day notification period, i.Park reported the commencement of remedial activities for Site area soil and groundwater in an email to NJDEP dated August 30, 2010.

#### Metals Impacted Groundwater

Metals exceeding GWQC were antimony, arsenic, and lead. Antimony was detected in all of the wells, except for MW-23, at a maximum concentration of 43.4 ppb. Arsenic was also detected in all of the wells on-Site at concentrations ranging from 26.9 to 33,600 ppb; the highest concentrations of arsenic in groundwater occurred in wells MW-36 (33,600 ppb), MW-3 (21,000 ppb) and MW-34 (7,900 ppb). Lead concentrations ranged from non-detect to 204 ppb. Previous sampling events in which samples were analyzed for TAL metals also detected aluminum, cadmium, chromium, iron, manganese, and sodium.

The remedy selected for metals impacted groundwater was removal of arsenic impacted soils greater than 600 ppm, a CEA, and groundwater monitoring. The CEA and groundwater monitoring will be initiated Site-wide as part of the RAA-4 Remedial Actions.

#### VOC Impacted Groundwater

Groundwater issues will be addressed under RAA-4 to be submitted under another cover. The remedial action performed covered the removal of the contamination sources. VOCs have been detected in groundwater at concentrations above the GWQC. The source of the VOCs has been found to be soft pitch and NAPL in the vicinity of MW-80, MW-1 and MW-36. Benzene is the primary VOC of concern, with groundwater concentrations ranging from ND to 2,000 ppb.

The remedy selected for VOC impacted groundwater was removal of soft pitch and visual NAPL impacting groundwater, a CEA, and monitored natural attenuation. To address the residual downgradient groundwater plume, following the completion of active remedial measures a CEA will be submitted for the entire Property which will cover all RAA's.

The NJDEP approved the remedial action for Site soil and conditionally approved the remedial action for groundwater in a letter dated April 25, 2008.

#### **4.1 SITE PREPARATION**

Site preparation activities included permitting, equipment mobilization, monitoring well abandonment, utility markout, setup of temporary facilities (construction trailers, equipment storage and staging areas, parking areas, construction entrances/exits, stockpile pad, truck exit ramp area and decontamination pad), perimeter air monitoring setup, erosion control, markout of excavation areas, and tree and stump removal. Each of these activities is discussed further below.

##### **4.1.1 Permitting**

GZA completed and submitted the following permit applications and/or plans for regulatory approval prior to the start of any on-site work: a Soil Erosion and Sediment Control Plan (SESCP); a Dewatering System Permit; a New Jersey Pollutant Discharge Elimination System (NJPDES) permit to discharge treated groundwater as a Significant Indirect User (SIU) to the Hudson River via the permitted outfalls; and a Treatment Works Approval (TWA) permit application to construct and operate a groundwater treatment system. The Bergen County Soil Conservation District (SCD) approved the SESCO, Application No. 07-B8950 on February 9, 2007. The NJDEP issued the NJPDES permit (Permit No. NJ0168840) and NJPDES General Permit (Permit No. NJ0155438) on August 29, 2007, with extensions granted on March 3, 2008, December 12, 2008, and June 23, 2009; the NJDEP issued the TWA permit (Permit No. 07-0688) on January 7, 2008. Copies of all permits are included in **Appendix B**.

##### **4.1.2 Monitoring Well Abandonment**

All monitoring wells located within the initially planned limits of the excavations were abandoned prior to remedial excavation. Eight monitoring wells were abandoned with a concrete/bentonite slurry prior to any excavation activities: MW-1, MW-3, MW-33, MW-36, MW-38D, MW-54, MW-58 and MW-70. In accordance with N.J.A.C. 7:9-9.1, a New Jersey-licensed well driller (Summit) certified that all wells were abandoned properly.

During the remedial action, four additional monitoring wells (MW-7, MW-52A and MW-80) located in extended excavations or in new excavation locations were

abandoned through concrete backfilling prior to their excavation. A New Jersey-licensed driller (Hawk Drilling of New Jersey) certified that these wells were abandoned properly. Hawk Drilling also abandoned MW-25, located in footprint of proposed Building D, after completion of the remedial actions.

Prior to the remediation in the SB-55 location, CH2M Hill contracted with a New Jersey-licensed driller (B& B Drilling) to abandon the wells located in the excavation footprint, as these wells were installed by Honeywell as part of the Quanta Superfund Site investigation. The wells abandoned prior to the SB-55 excavation were 107DS and 107A.

MW-34 could not be located prior to construction for abandonment. A magnetometer was used to locate the well with no success. GZA contacted Zenith Nadir Surveying to locate the well using the GPS coordinates. A flag was placed in the location of the monitoring well and hand shovels were used to clear any overburden. An estimated three to four feet of overburden was removed and the well was still not uncovered. It is assumed that this well was lost due to ongoing construction on the site. MW-52A and MW-25 were abandoned during and after the remedial action and the abandonment permits are still pending and will be made available when received. Monitoring well abandonment reports are presented in **Appendix C**.

#### **4.1.3 Utility Mark-out**

D.A. Collins completed a mark-out of subsurface utilities prior to intrusive activities by calling New Jersey One Call.

#### **4.1.4 Decontamination Station**

D.A. Collins constructed a decontamination station in the contamination reduction zone (CRZ) that included an equipment decontamination pad and truck exit ramp. The equipment decontamination pad was approximately 20 feet wide by 70 feet long, and was constructed of 15 mil polyethylene sheeting wrapped over a timber frame to create a berm and overlain by 16 inches of crushed stone. A potable water line was installed with a pressure washer. All heavy equipment was pressure washed during decontamination. Rinse water that collected in the gravel was periodically pumped into an adjacent frac tank that was eventually treated and discharged. This staging area was used for all equipment decontamination, and was the focal exit area for all trucks leaving the site.

#### **4.1.5 Stockpile Pad Construction**

Stockpiles were constructed and maintained to control dust and vapor emissions and surface water run-off. The stockpiles were placed adjacent to the excavations, covered with a minimum of 10-mil-thick polyethylene, overlapped and weighted to form a continuous waterproof barrier. In addition, an impermeable stockpile pad on the

eastern portion of the site was constructed using 60 mil polyethylene with sealed seams, secured by Jersey barriers. Soils from the B, C, D, E, F, and G excavations were segregated by waste stream and staged in the containment pad prior to load out. Mixing of the water saturated soil excavated from below the water table with lime kiln dust (LKD) was performed on the stockpile pad. The LKD was used as a reagent to solidify the material to prevent leakage during transport. All stockpile pads adjacent to the excavations were contained in 10 mil poly ethylene and covered at the end of each day. Stockpile covers were inspected daily and maintained as necessary by D.A. Collins.

#### **4.1.6 Perimeter Air Monitoring Setup**

In January 2008, prior to conducting any intrusive remedial activities at the Site, AirLogics, LLC (AirLogics) of Norwood, MA, mobilized an automated perimeter air monitoring system to the Site. The system was comprised of four monitoring stations located at the Site perimeter and a meteorological station located on-Site. The system was designed to provide real time monitoring of short-term exposure levels for specific VOCs, PAHs, metals and dust. Concentrations of PAHs and metals were monitored utilizing particulates as a surrogate because real-time air-monitoring instruments for PAHs and metals do not currently exist.

During intrusive activities, GZA operated the system and conducted background sampling of air quality. GZA collected VOC and respirable dust concentrations data from the perimeter of the Site, in addition to collecting 8-hour air samples in accordance with USEPA approved sampling and analytical methods to confirm the system results.

#### **4.1.7 Erosion Control**

D.A. Collins installed and maintained the erosion controls specified in the Soil Erosion and Sedimentation Control Plan for the duration of the on-Site earthwork activities. These activities included the installation of stabilized construction entrances for vehicle ingress/egress, and the installation and maintenance of silt fencing and hay bales along the perimeters of the excavation and around stockpiles of clean and contaminated fill.

#### **4.1.8 Excavation Boundary Markout**

GZA subcontracted Licensed Surveyor Wayne Burgett, P.L.S. of Zenith Nadir Survey Inc. to mark out the excavation limits with stakes. Excavation locations A through K stakes driven to the ground by the excavator were maintained by DA Collins and GZA. When stakes were lost due to construction activity they were reestablished using benchmarks placed on site. The surveyor was brought back during the remediation to mark out the additional excavation locations SB-55, MW-7 and Excavation L.

#### 4.1.9 Removal of Trees and Stumps

Trees within and adjacent to the excavation areas were cleared by D.A. Collins prior to the commencement of excavation. All stumps were chipped on Site for recycling.

#### 4.2 PITCH/PCB-IMPACTED SOIL REMEDIATION

D.A. Collins performed the remediation of pitch-impacted and PCB-impacted soils, which included excavation and temporary on-site stockpiling. Stockpiled soils were mixed with LKD, as required, prior to transportation off-site. The final excavation limits and depths were based on post-excavation samples that were visually evaluated for the presence of soft roofing pitch material and compared to the IGWSCCs and RDCSCCs to document the effectiveness of the remedial action. **Figure 4** includes the excavation footprint proposed in the RAWP; **Figure 5** presents the final limits of excavation.

The remediation was conducted in September 2010 through January 2011 and included the following activities:

- Groundwater Control,
- Excavation,
- Stockpiling,
- Post-excavation sampling,
- Off-Site Disposal,
- Site restoration including backfilling, and
- Residual materials management.

These activities are described in the following sections of this report.

##### 4.2.1 Groundwater Control

Originally, dewatering was proposed when necessary to maintain dry excavations. Prior to the commencement of excavation, a preliminary bench test was performed by D.A. Collins to evaluate the feasibility of dewatering on the site. A 10-foot by 10-foot by 10-foot deep test pit was excavated and dewatering was performed with a series of sump pumps set to draw at 150 gallons per minute. Water removed was transferred to a frac tank for holding before being treated. The feasibility test yielded results that demonstrated the inability to successfully dewater the excavations on site to allow for dry excavations. NJDEP subsequently determined that the excavations could take place under water saturated conditions.

Visible NAPL was removed from excavations with a two step process. First, oil booms attached to ropes were dragged across the water to concentrate the NAPL in one localized area. The accumulated NAPL was then vacuumed out using a compressor and vacuum unit affixed to a 55-gallon drum. When full, drums were

sealed and transported off site. A copy of the disposal manifest for 55 gallon drums associated with excavation skimming is shown as **Appendix D**.

#### **4.2.2 Excavation**

Six excavation areas were proposed in the approved RAWPs and RAA-1 and -2 Delineation and Data Gap report to address PCBs, pitch and fuel oil impacted soils in the RAA-1 and RAA-2 areas. Following discussions with the NJDEP, GZA proposed that the upper 2 to 3 feet of soil, which was characterized by a brown soil matrix or engineered crushed stone and which did not contain any pitch or cinder ash fill, could be removed and stockpiled separately for evaluation of on-Site re-use (refer to the end of **Section 4.3.3**). D.A. Collins commenced excavations in September 2010.

GZA personnel were on-Site during the excavations and used a photoionization detector (PID), visual observations, and agitation tests to identify areas of pitch impacted soil on the sidewalls and bottom of the excavation. Based on these observations, additional soil removal was completed, as necessary, to remove localized areas of soft pitch-impacted soils that were encountered.

In order to evaluate whether any flowable soft-pitch or NAPL remained in the excavation side walls, GZA performed two different sets of field tests. For minimally saturated soils, samples were placed in zip lock bags and massaged to observe the presence of NAPL. For soils below the water table, a field agitation test was performed using a clear glass bottle containing the target soil sample. Water was added to the bottle and agitated and left to settle. Sample jars were visually analyzed at the water line and at the bottom of the jar for the presence of NAPL. If samples did not exhibit the presence of NAPL, endpoint locations were logged and sent for laboratory analysis. Along with these field tests, soil samples were placed in zip lock bags and screened with a PID to assess the presence of volatile organic compounds.

In addition, excavations were allowed to stay open for several days. During this period, GZA evaluated the sidewalls of the excavations for visible evidence of soft flowable pitch, and observed the accumulation of NAPL on the water table.

During the remediation, a total of 4,146 tons of pitch, PCB and fuel oil-impacted soil and debris was excavated within the areas identified on **Figure 5**, which also shows the final excavation footprints.

Ancillary work in support of this excavation work included dust control, debris removal, and stockpile maintenance. D.A. Collins sprayed water within the excavations and on roadways as necessary to control fugitive dust. All concrete encountered within the excavation footprint was stockpiled for subsequent sampling and analysis for reuse. When subsurface piping was encountered, GZA verified that the lines were inactive, inspected them for free liquids, cut them into manageable lengths, and staged them for disposal. All subsurface piping encountered during the

remediation was inactive at the time of discovery, did not contain petroleum or pitch liquids, and did not extend off-site. Piping and debris steel was stockpiled on-Site for subsequent disposal.

#### **4.2.3 Transportation and Disposal**

Longhorn Transportation, Inc. (LTI) of Cleveland, Ohio, transported approximately 4,146 tons of fuel oil, pitch, and PCB impacted soil to the Apex Sanitary Landfill (Apex) in Amsterdam, Ohio.

All trucks used for the transportation of excavated material were lined with a minimum 6-mil-thick polyethylene, covered with a tarpaulin to protect against wind and rain, and decontaminated prior to leaving the Site. Shipping manifests and all disposal documentation for pitch-impacted materials are presented in **Appendix E**. A summary of the waste generated is provided in **Table 2**.

#### **4.2.4 Post-Remediation Sampling and Results**

In accordance with the sampling plan in the approved RAWPs, GZA collected post-excavation samples from the sidewalls and bottom of the excavations. As discussed in the Data Gap and Delineation Data Report, excavation areas were predelineated based upon visual observations in the Spring of 2010 using data obtained from soil borings. Excavations areas and volumes were estimated at this time and were subject to change due to the mobility of the contaminant. However, as the contaminant was a mobile organic compound, soil analytical samples collected during the boring investigation could not be used as post-excavation samples. Therefore, the Spring 2010 data was supplemented with a total 43 post-excavation samples for laboratory analysis. Sidewall samples were collected at approximately 30-foot intervals along the perimeter of the excavation. Bottom samples were collected at a frequency of one per 900 SF. The sample locations are depicted on **Figure 6** through **Figure 12** and corresponding excavation designations are listed in the Table of Contents.

In addition to the laboratory analyses referenced below, the pitch/NAPL field tests described in Section 4.2.2 above were applied. No soft pitch or NAPL was detected in these post-remediation tests with exception to the Excavation L samples that were adjacent to Existing Building 1.

*Excavation G, RAA-1*

The completed footprint of the excavation was approximately 1,898 SF. A total of nine sidewall samples and four new bottom samples were collected during the remediation. All samples were analyzed for VOCs and SVOCs.

*Excavation I-J, RAA-2*

Excavation I extended into the J location, and sampling efforts were combined accordingly. The completed footprint of the excavation was approximately 2,701 SF. A total of nine sidewall samples (six for I and three for J) and three new bottom samples (1 for I and 2 for J) were collected during the remediation. All samples were analyzed for VOCs and SVOCs, and J samples were additionally analyzed for PCBs.

*Excavation K, RAA-2*

The completed footprint of the excavation was approximately 932 SF. A total of 5 sidewall samples and two new bottom samples were collected during the remediation. All samples were analyzed for VOCs and SVOCs.

*Excavation L, RAA-2*

The completed footprint of the excavation was approximately 6,136 SF. A total of 7 sidewall samples and four new bottom samples were collected during the remediation. All samples were analyzed for VOCs and SVOCs.

Post-excavation samples obtained during the remediation were collected in accordance with the NJDEP's Field Sampling Procedures Manual (FSPM). Samples were submitted under chain-of-custody protocols to Alpha Analytical of Westborough, Massachusetts (NJ Certification ID No. MA935). All samples from Pitch-NAPL locations were analyzed for target compound list (TCL) VOC+15, and TCL BN+15 using EPA Methods 8260 and 8270, respectively. Laboratory analytical reports and QA/QC documentation are presented in **Appendix F**.

The analytical results from all of the excavations had exceedances over the NJDEP RDSCC for SVOCs. There were no exceedances of the endpoints for VOCs with the exception of the Excavation L location, which had VOC exceedances on the west wall. During the extension of this excavation to the east, soft pitch was observed along the east sidewall adjacent to the building. The excavation could not be advanced further due to potential for undermining the building. It is also noted that there were exceedances on the south wall too from the hard pitch located intermittently. During endpoint collection the sampler attempted to avoid the hard pitch, but it was not completely avoidable due to shards of hard pitch being intermittent within the soil strata. As per our remedial objective, hard pitch was to remain on site.

The absence of soft roofing pitch material and the lack of VOC contaminants above applicable standards, with the exception of one wall of excavation L, indicate that

remedial objectives were met. Since the approved RAWP called for the in-place management of hard pitch and HFM material, the presence of SVOCs above standards does not in itself indicate the need for further excavation. A summary of the VOC, SVOC and PCB analytical results is presented in **Table 3** through **Table 5**.

#### *AOC 1E17, RAA-5*

As discussed in the RAWP for RAA-5, as well as in Section 2.0 above, VOCs were detected in soils below the water table at soil boring TL12-00.5 in the vicinity of MW-106A. The NJDEP indicated that four monitoring wells should be installed around MW-106A and evaluated for the presence of LNAPL. These monitoring wells (MW-214, MW-215, MW-216 and MW-217) were installed by Arcadis on November 30 and December 1, 2010. No evidence of NAPL was observed during the installation of these wells. Unfortunately, two of the wells (MW-214 and MW-215) were subsequently destroyed during development activities initiated by Mr. Hegney and could not be gauged for the presence of NAPL. Wells MW-216 and 217 were gauged on January 19 and March 9, 2011; since no LNAPL was observed, no excavation was proposed for this area. Please refer to **Appendix G** for form B's and well installation records.

#### **4.2.5 Site Restoration and Backfill**

Immediately after post excavation samples were collected each location was backfilled to existing grade. Certified Clean Material was stockpiled on site and backfilled using a rubber tire payloader. Soils were not compacted until backfilling reached the water table elevation. I.park edgewater contracted with SESI Consulting Engineers Inc. to observe the compaction on site.

#### **4.2.6 Residual Materials Management**

Residual materials generated during the remedial activities described above included decontamination rinsate and water collected from the stockpile pads and truck wash were handled in accordance with applicable laws and regulations. These residual wastes included. This water was collected and stored in an on-site frac tanks and prior to discharge water samples were obtained from the tanks for analysis for priority pollutant list constituents (PP+40). As specified in the approved RAWPs and Addendum letters, treated groundwater was allowed to be returned to excavations following a 60-70% reduction in contaminants. This was accomplished through the use of a groundwater treatment system and was confirmed through the use of pre and post treatment water sample collected and analysis. The groundwater influent and effluent sample packages are shown as **Appendix H**.

### **4.3 ARSENIC-IMPACTED SOIL REMEDIATION**

D.A. Collins performed the remediation of arsenic-contaminated soils from September 2010 through January 2011. Post-remediation samples were compared to the NJDEP approved site specific alternative remedial standard for arsenic of 600 ppm. **Figure 4** includes the excavation footprints proposed in the RAWP and **Figure 5** presents the limits of final excavations. The RAWPs proposed the excavation of eight areas of arsenic impacted soils designated A through F, H, and SB-55. During excavation visual observations for purple and/or yellow soils (previously found to be indicative of elevated arsenic concentrations), as well as field screening using an x-ray fluorescence detector (XRF), were used to provide initial clearance of sidewalls and bottoms prior to laboratory analysis. GZA elected to use a conservative screening criterion of 400 parts per million for the XRF to account for potential variances in results from external factors (extreme cold, extreme heat, wet soils) before collecting and submitting confirmatory soil samples for laboratory analysis.

All samples for arsenic analysis using SW-846 6010B methodologies were submitted to Alpha Analytical of Westborough, Massachusetts (NJ Certification ID No. MA935). The laboratory analytical data packages and QA/QC documentation are included in **Appendix F**. A summary of post-excavation arsenic analytical results collected during remediation is presented in **Table 6**. Confirmatory sample results collected during the Delineation and Data Gap Investigation are included in **Appendix A**.

The remediation of arsenic-impacted soils included the following activities:

- Excavation,
- Transportation,
- Post-excavation sampling,
- Site restoration (including backfilling), and
- Residual materials management.

These activities are described in the following sections of this report.

#### **4.3.1 Excavation**

Arsenic-contaminated soils were found to be localized in eight areas in the northern and central portions of the Site. D.A. Collins excavated a total of approximately 17,400 tons of arsenic-contaminated soils. Arsenic contaminated soil that was stabilized with Portland cement or that contained an excessive amount of debris was transported to the Apex Sanitary Landfill (Apex) in Amsterdam Ohio. Other arsenic contaminated soil was transported to the Middlesex County Utilities Authority facility in East Brunswick, New Jersey (MCUA).

#### **4.3.2 Transportation and Disposal**

Two licensed transporters, C & O Trucking Inc. (CO) of Roebing, New Jersey and Sam Battal Trucking, Inc. (SBT) of Wayne, New Jersey, transported approximately 11,600 tons of arsenic contaminated soil to MCUA.

LTI transported approximately 3,400 tons of arsenic contaminated soil with a high percentage of debris, and 2,400 tons of lead and arsenic contaminated soil that was stabilized with Portland cement, to Apex. Shipping manifests and disposal documentation for arsenic-impacted materials are presented in **Appendix I**. A summary of the waste generated is provided in **Table 2**.

### **4.3.3 Post-Remediation Sampling and Results**

GZA utilized a combination of soil data collected during the Data Gap and Delineation Study (55 pre-delineation samples), as well as 48 post-remediation samples, to confirm that soils remaining on Site had arsenic concentrations below 600 ppm. The samples taken from the pre-remediation events defined excavation limits around the site. With these defined excavation limits, GZA performed field confirmation with the XRF on all sidewalls as well as collected supplemental endpoints to satisfy the one per 30 linear feet and one bottom per 900 CY requirements. In accordance with the sampling frequency specified in the approved RAWP, GZA collected one sidewall post-excavation sample from the base of each excavation for every 30 linear feet of excavation, and one bottom sample for every 900 SF. The sample locations are depicted on **Figure 6** through **Figure 12** and corresponding excavation designations are listed in the Table of Contents.

#### *Excavation A, RAA-1*

The completed footprint of the excavation was approximately 6,030 SF. The lateral extent of this excavation was based on analytical data for arsenic from 10 pre-delineation sampling points; the depth of the excavation was based on data from four pre-delineation samples and two post-excavation samples. During the remediation, sidewalls were observed for yellow or purple soils and analyzed with the XRF. The arsenic concentration range for the sidewall samples was 19 ppm to 220 ppm; the bottom samples exhibited arsenic concentrations that ranged from 9.2 ppm to 320 ppm.

#### *Excavation B-C, RAA-1*

While excavating location B, purple soils were observed and samples analyzed with the XRF yielded results over the 400 ppm screening criteria. These exceedances resulted in the merging of the B and C excavations. The completed footprint of the combined excavation was approximately 6,034 SF. The lateral extent of this excavation was based on analytical data for arsenic from seven pre-delineation sampling points and six post-excavation samples; the depth of the excavation was based on data from four post-excavation samples. The arsenic concentration range for

the sidewall samples was 4.5 ppm to 510 ppm; the bottom samples exhibited arsenic concentrations that ranged from 14 ppm to 270 ppm.

#### *Excavation D, RAA-1*

The completed footprint of this excavation was approximately 5,350 SF. The lateral extent of this excavation was based on analytical data for arsenic from eight pre-delineation sampling points and three post-excavation samples; the depth of the excavation was based on data from two pre-delineation sampling points and four post-excavation samples. The arsenic concentration range for the sidewall samples was non-detect to 180 ppm; the bottom samples exhibited arsenic concentrations that ranged from 6.5 ppm to 11 ppm.

#### *Excavation E, RAA-1*

The completed footprint of the excavation was approximately 291 SF. During the course of the remediation of this area, a concrete structure was encountered on the north side of the excavation. This structure was likely the basement wall of former building 66. It appeared that the building basement had been filled with concrete. Therefore, the north side wall sample (GZA-196) was collected from the soils on the top of the structure, while the southern limit of excavation was delineating using existing boring GZA-162. All soils were removed up to the concrete wall. Otherwise, the lateral extent of this excavation was based on analytical data for arsenic from four pre-delineation sampling points; the depth of the excavation was based on data from one pre-delineation sampling point and one post-excavation sample. The arsenic concentration range for the sidewall samples was 4.4 ppm to 363 ppm; the bottom samples exhibited an arsenic concentration of 11 ppm.

#### *Excavation F, RAA-1*

The completed footprint of the excavation was approximately 136 SF. The lateral extent of this excavation was based on analytical data for arsenic from four pre-delineation sampling points; the depth of the excavation was based on data from one pre-delineation sampling point and one post-excavation sample. The arsenic concentration range for the sidewall samples was non-detect to 180 ppm; the bottom samples exhibited arsenic concentrations that ranged from 6.5 ppm to 11 ppm. The existing predelineation data exhibited arsenic concentrations which ranged from 0 ppm to 170 ppm. The bottom samples exhibited arsenic ranging from 69 ppm to 160 ppm.

#### *Excavation H, RAA-1*

The completed footprint of the excavation was approximately 18,165 SF. The lateral extent of this excavation was based on analytical data for arsenic from eight pre-delineation sampling points and 12; the depth of the excavation was based on data from seven pre-delineation samples and five post-excavation samples. During the

remediation of this area a yellow soil horizon that was characterized by elevated XRF readings was observed immediately below the water table. The dimensions of this excavation were extended due to the presence of the yellow soils and XRF readings greater than 600 ppm. The arsenic concentration range for the sidewall samples was 13 ppm to 370 ppm; the bottom samples exhibited arsenic concentrations that ranged from 12 ppm to 290 ppm. REP-NSW-H15 was taken due to the exceedance of concentration of arsenic in sample REP-NSW-H11.

#### *Excavation SB-55, RAA-5*

The completed footprint of the excavation was approximately 2,574 SF. The lateral extent of this excavation was based on analytical data for arsenic from six post-excavation confirmatory samples; the depth of the excavation was based on data from four post-excavation samples. A vertical concrete structure was encountered on the western excavation sidewall from 4 to 12 feet bgs. This structure was likely the basement wall of a former building. All soils were removed up to the wall, and additional samples were collected along the northwest and southwest portion of the excavation adjacent to the west sidewall. Sidewall samples were collected at the depth of 8.5 feet in front of the concrete wall.

#### **4.3.4 Site Restoration and Backfill**

Immediately after post excavation samples were collected each location was backfilled to existing grade. Certified Clean Material was stockpiled on site and backfilled using a rubber tire payloader. Soils were not compacted until backfilling reached the water table elevation. i.park edgewater contracted with SESI Consulting Engineers Inc. to observe the compaction on site.

#### **4.3.5 Residual Materials Management**

Residual materials generated during the remedial activities described above included decontamination rinsate and water collected from the stockpile pads and truck wash were handled in accordance with applicable laws and regulations. These residual wastes included. This water was collected and stored in an on-site frac tanks and prior to discharge water samples were obtained from the tanks for analysis for priority pollutant list constituents (PP+40). As specified in the approved RAWPs and Addendum letters, treated groundwater was allowed to be returned to excavations following a 60-70% reduction in contaminants. The groundwater influent and effluent sample packages are shown as **Appendix H**.

### **4.4 PERIMETER AIR MONITORING**

i.Park implemented the automated perimeter air monitoring program proposed in the perimeter Air Monitoring Work Plan. The objective of the real time air monitoring

system was to identify changes in concentrations of VOC and/or respirable dust as they occurred so that Site personnel could implement corrective measures before target action levels were exceeded. Respirable dust was used as a surrogate for ambient polycyclic aromatic hydrocarbons (PAH) compounds and metals because real-time methods for monitoring particle bound PAHs and metals do not currently exist.

The perimeter air monitoring program was implemented during remediation activities to protect human health, to evaluate the effectiveness of and need for vapor and dust suppression controls, and to document air quality during remediation activities. An automated perimeter air monitoring system was supplied by AirLogics and operated by GZA personnel. The system was operated during all intrusive activities. Daily air monitoring media was collected in accordance with USEPA approved sampling and analytical methods to confirm the system results.

The results of the Perimeter Air Monitoring Program indicate that the aggressive measures implemented during the excavation activities were effective in keeping dust exposures low and preventing VOC action level exceedances. A detailed description of the sampling procedures and a summary of all analytical results was submitted with the Perimeter Air Monitoring Report in July 2011.

#### **4.5 GROUNDWATER REMEDIATION**

The groundwater remedy for the Site was designed and implemented as a two-part strategy. Sources of groundwater impacts at the Site were actively remediated by removing soft pitch which was impacting groundwater, and removing arsenic impacted soils characterized by concentrations greater than 600 ppm. The second part of the groundwater remedy is the natural attenuation of impacted groundwater. A more detailed discussion of the groundwater remediation activities is presented below.

##### **4.5.1 Groundwater Monitoring Well Installation**

Following soil remedial activities, twenty additional permanent monitoring wells were installed at the Site between May 3 and May 9, 2011. All monitoring wells were installed so that the screened interval spanned the water table. The wells were constructed of two-inch diameter; 0.010-inch slotted PVC screened from the bottom of the boring to two feet bgs. The annular space around the screen and riser was backfilled with Morie No. 1 filter sand to approximately one foot above the top of the screen. The remaining annular space was backfilled with bentonite pellets and the wells were finished at the ground surface with a locking grip cap, keyed-alike lock, and "stick-up" protective casing with a concrete pad. The wells were then developed using a submersible pump. Boring logs and monitoring well construction logs are provided in **Appendix J**.

Monitoring wells were generally installed within the downgradient portions of the excavations. However, due to site constraints three well had to be installed outside the excavation footprints, as follows:

- PMW-5 was placed to the northeast of Excavation B/C due to the proposed building C-1 development,
- PMW-10 was placed to the southeast of Excavation SB-55 due to the presence of stockpiles of soil and traffic related to the development on site, and
- PMW-12 was placed to the northeast of Excavation G due to the constraints of the Temporary Site parking lot.

Non-hazardous drill cuttings from the borings and well installations, as well as other investigation-derived wastes and purge water, were containerized in 55-gallon, New Jersey Department of Transportation (NJDOT)-approved steel drums and disposed of off-site by EISCO of Port Reading, New Jersey. Disposal manifests are provided in **Appendix K**.

#### **4.5.2 Casing Elevation Survey**

New Jersey-licensed surveyors located and surveyed the measurement point for each of the twenty newly installed monitoring wells at the Site. The latitude and longitude of each well was measured to the nearest one-tenth of a second and the elevation of each measurement point was measured to one-hundredth of a foot. The elevation of each monitoring well was referenced to an on-site datum (NAVD 1988). Monitoring Well Certification Forms A and B, stamped by a NJ licensed surveyor detailing the location and construction of the wells are provided in **Appendix L**.

#### **4.5.3 Groundwater Monitoring Well Sampling**

GZA collected groundwater samples from the newly-installed monitoring wells (PMW-1 through PMW-20) in May 2011. Low flow purging and sampling methods, as described in NJDEP's *Low Flow Purging and Sampling Guidance* dated December 2003, were utilized during all groundwater sampling. Groundwater samples were collected from the middle of the screened PVC pipe using a stainless steel submersible, positive-displacement pump with controller and dedicated tubing. Water quality parameters, including pH, specific conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential (ORP), were measured approximately every five minutes during the purge process at each well using a Horiba U-22 flow through cell water quality meter. Purging ceased when all field parameters stabilized to within the range specified in the NJDEP guidance document. Low-flow sampling logs are provided in **Appendix M**.

Sample containers were then filled, sealed, and preserved on ice. The samples were delivered via laboratory courier to Alpha Analytical in Westboro, Massachusetts for

PP+40 analyses. Five duplicate samples were collected; DUP-1 was collected from PMW-20, DUP-2 was collected from PMW-19, DUP-3 was collected from PMW-17, DUP-4 was collected from PMW-11, and DUP-5 was collected from PMW-9. Four trip blanks and two field blanks were also taken. The groundwater monitoring well locations and results are shown on **Figure 13**.

#### 4.5.4. Groundwater Analytical Results

The VOCs that were detected above the GWQC in groundwater were benzene, methylene chloride, xylenes, styrene, toluene and ethylbenzene. It should be noted that most of these compounds were detected in the sample from PMW-10, which is located downgradient of excavation SB-55 within the footprint of the Quanta Resources Superfund Site plume. Benzene was detected above the GWQC of 1 ug/L in the following samples: PMW-6 at 30 ug/L, PMW-10 at 16,000 ug/L, PMW-12 at 720 ug/L, PMW-15 at 3 ug/L, PMW-16 at 1.5 ug/L, and PMW-19 at 6.3 ug/L. Methylene chloride was only detected in the PMW-8 and PWM-11 samples; methylene chloride is a common laboratory contaminant, and its presence is likely associated with the laboratory extraction process. PWM-10 contained the exceedances of ethylbenzene, o-xylene, p/m xylene, styrene and toluene.

Several SVOCs were detected above their respective GWQCs including: 1,2 – dimethylphenol, bis(2-ethylhexyl)phthalate, naphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene and pentachlorophenol. PMW-6, PMW-9, PMW-11 and PMW-16 did not exhibit any exceedances of SVOC GWQCs.

None of the groundwater samples were found to contain concentrations of PCBs or pesticides above the GWQCs.

All of the groundwater samples collected had GWQC exceedances of arsenic ranging from 3.6 ug/L to 5,914 ug/L, and of manganese ranging from 227 ug/L to 2,880 ug/L. Four of the samples collected (PMW-7, PMW-8, PMW-12 and PMW-13) had exceedances of antimony ranging from 7.1 ug/L to 67.8 ug/L. Eleven of the samples had exceedances of lead over the GWQCs ranging from 5.2 ug/L to 81.2 ug/L. The complete laboratory package is provided as **Appendix N**. A summary of the groundwater analytical results is included as **Table 7**.

#### 4.5.5 On-Site Groundwater Impacts

i.Park addressed impacted groundwater at the Site through the removal of source area impacted soils and soft pitch impacting groundwater. **Sections 4.2.2** and **4.3.1** of this document describe the removal of source material.

Since the completion of soil remediation at the site, groundwater sampling has been conducted in monitoring wells situated within the limits and immediately

downgradient of the soil excavation areas. These groundwater sampling events were conducted to establish a baseline for post remediation monitoring. **Figure 13** provides groundwater sampling results in the post-excavation groundwater monitoring wells.

MW-53A, located upgradient of arsenic excavation A, was sampled in 2007 and showed levels of arsenic, benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above the GWQCs. After excavation of location A, three post-remediation wells were installed downgradient of this excavation. PMW-2 and PMW-3 yielded results significantly lower concentrations than the MW-53A sample.

MW-7, located within the fuel oil excavation, was sampled in 2003 to 2007 and showed levels of arsenic, antimony, lead, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and ideno(1,2,3-cd)pyrene above the GWQCs. After the excavation of this location, one post-remediation well was installed downgradient of this excavation. PMW-4 showed lower concentrations of the above compounds with the exception of lead. There was no benzene detected in this round of sampling, and no LNAPL was observed in PMW-4.

MW-33, located within the arsenic excavation B-C, was sampled in 2003 to 2007 and showed levels of arsenic, antimony, lead and chromium above the GWQCs. After the excavation of this location, three post-remediation wells were installed downgradient of this excavation. PMW-5 showed a lower concentration of the above compounds with the exception of lead. PMW-6 showed lower concentrations of the referenced compounds but had a detection of benzene above the GWQCs. PMW-7 showed a lower concentration of the referenced compounds but also had several SVOC detections above the GWQCs. Arsenic concentrations were lower for all three wells.

MW-3 and MW-34, both located within arsenic excavation D, were sampled in 2001 to 2007 and showed levels of arsenic, benzene, benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above the GWQCs. After the excavation of this location, one post remediation well was installed downgradient of this excavation. PMW-8 showed a lower arsenic concentration.

MW-57, located crossgradient of arsenic excavation E, was sampled in 2006 and 2007 and showed levels of arsenic and antimony above the GWQCs. After the excavation of this location, one post remediation well was installed downgradient of this excavation. PMW-9 showed lower concentrations of both arsenic and antimony.

MW-107A, located within arsenic excavation SB-55, was sampled in 2006 and showed levels of benzene, ethylbenzene, xylene (total), toluene, trichloroethane, arsenic, benzo(a)anthracene, benzo(a)pyrene and naphthalene above the GWQCs. After the excavation of this location, PMW-10 was placed approximately 30 feet downgradient of the excavation due to site constraints. The benzene and toluene concentrations were higher than previously recorded. However, it should be noted that this excavation area was not designed to address the source of VOCs, which are related

to coal tar impacts from the Quanta Site. The arsenic concentration was less than previously recorded in MW-107A.

MW-69, located upgradient of arsenic excavation F, was sampled in 2007 and showed levels of benzene, arsenic, lead, benzo(a)anthracene, benzo(a)pyrene and pentachlorophenol above the GWQCs. After the excavation of this location, one post remediation well was installed downgradient of this excavation. PMW-11 exhibited lower concentrations of arsenic.

MW-36, located within fuel oil excavation G, was sampled from 2003 to 2007 and showed levels of benzene, methylene chloride, arsenic, lead, and antimony above the GWQCs. After the excavation of this location, one post remediation well was installed downgradient of this excavation. PMW-12 showed lower concentrations of the above compounds.

MW-58, located within arsenic excavation H, was sampled in 2006 and 2007 and showed levels of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, ideno(1,2,3-cd)pyrene, antimony, arsenic and lead above the GWQCs. After the excavation of this location, three post-remediation wells were installed downgradient of this excavation. All wells exhibited lower concentrations of the above compounds, especially with regard to arsenic.

MW-70 and MW-78, both located upgradient of the PCB-pitch excavation I-J, were sampled from 2007 to 2010 and exhibited levels of benzene, trichloroethene, vinyl chloride, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, ideno(1,2,3-cd)pyrene, benzo(k)fluoranthene, chrysene, 2,4 dimethylphenol, naphthalene, arsenic, lead, PCBs and Alpha and Gamma BHCs above the GWQCs. After the excavation of this location, two post-remediation wells were installed downgradient of this excavation. Both wells had lower concentrations of the above compounds. However, there was a detection of total cyanide at 214 ppb, above the GWQC.

MW-1, located within pitch excavation K, was sampled in 2001 and showed levels of benzo(a)anthracene, benzo(a)pyrene, benzo(b)anthracene and lead above the GWQCs, as well as accumulations of roofing pitch material. After the excavation of this location, PMW-18 was installed downgradient of this excavation. The sample from this well had lower concentrations of the above compounds. No pitch or NAPL was observed in the well.

MW-80, upgradient of pitch excavation L, was sampled in 2010 and showed levels of benzo(a)anthracene, benzo(b)fluoranthene, naphthalene, arsenic, chromium and lead above the GWQCs. After the excavation of this location, one post-remediation well was installed downgradient of this excavation. As noted above (see section 4.2.4-Excavation L), soft pitch was observed on the sidewall adjacent to the building and may extend beneath the slab. SVOC concentrations were lower, but benzene was detected at 6.3 ppb in the groundwater sample, above the GWQS.

Given the timing of the groundwater sampling event (two to three months following excavation) and the greater turbidity in groundwater samples collected during May 2011 versus previous groundwater sampling events, we believe that some of the increases in dissolved concentrations may be due to residual effects from the disturbance of soils and groundwater during excavation activities. In addition, the increases in concentration were relatively small and several wells indicated decreasing concentrations. In any case, however, these wells will continue to be monitored through the post remediation groundwater monitoring program being conducted by i.Park and as part of the CEA. In addition, the groundwater cut-off wall and control system proposed along the Hudson River will limit the discharge of contaminated groundwater to the Hudson River.

#### **4.5.6 Post-Remediation Groundwater Monitoring Program**

As a condition for approval of natural attenuation, the NJDEP requested that i.Park implement a post-remediation groundwater monitoring program. The purpose of the monitoring program is to demonstrate that the removal of source area soils at the Site allows natural degradation to improve groundwater quality downgradient, which would be evidenced by decreasing concentrations and extent of groundwater impacts. Groundwater monitoring will be conducted through a network of wells installed along and around the delineated extent of groundwater impact. These wells will include monitoring wells installed as part of the remedial investigation and monitoring wells installed as a result of the additional groundwater investigation.

Following excavation, twenty additional groundwater monitoring wells were installed to monitor the results of the source area excavation and to replace wells abandoned during excavation activities. Thirteen wells (MW-70, MW-54, MW-107DS, MW 107A, MW-7, MW-34, MW-36, MW-38D, MW-3, MW-33, MW-1, MW-80 and MW-58) were abandoned during excavation activities.

Together with the monitoring wells installed during previous phases of investigation, there are now 21 wells along and around the area of groundwater impact associated with RAA-1, -2 and -5. The post-remediation groundwater monitoring program will consist of quarterly sampling of the 20 post-excavation monitoring wells and the one previously installed existing well. We recommend that post-remediation groundwater monitoring data be reviewed after the second year to evaluate the effectiveness of natural attenuation as a groundwater remedy for the Site, and that a recommendation be made as to the need for further groundwater monitoring. This monitoring program may be revised in the RAWP for RAA-4, if so a rationale will be presented to the NJDEP.

#### **4.6 SITE RESTORATION**

Site restoration activities included backfilling the excavation, the removal of

temporary facilities, and the construction of new buildings and parking lots.

Concrete removed from the site from building pads and excavations was sampled prior to disposal for reuse. Since initial analyses showed concrete samples exceeding the standards for SVOCs, it was recognized that, presumably due to contact with residual soils, some of the concrete could not be reused on site. Concrete was then pressure washed and resampled for recycling purposes. Concrete that failed the recycling criteria was sent out with the loads of soil to Apex. The remainder was shipped to a class B recycling facility. A copy of the manifests to Bayshore Recycling is shown as **Appendix O**. A summary of the results is shown as **Table 8** and the laboratory package for the concrete samples is shown as **Appendix P**.

Additional soil samples were collected from the on-Site stockpiles to evaluate the feasibility of reuse. Composite samples were generated from five grab samples each. A total of twelve composite samples were collected and submitted for the following analyses: VOCs, SVOCs, TAL metals, PCBs and pesticides. All of the samples failed the reuse parameters for the site and were subsequently shipped offsite to Middlesex. A summary of the results is shown as **Table 9** and the laboratory analytical packages are shown in **Appendix Q**.

D.A. Collins began backfilling the Site immediately after the remedial limits were reached. Backfill material used for the Site consisted of the fines and 2-inch gravel derived from rock from the palisades sill removed as part of the development on 7401 River Road, North Bergen, New Jersey construction project located near the Property. This material had previously been obtained by i.Park and stockpiled on the Site for use as backfill/fill during remedial and/or Site development activities. The Virgin Source Letter for material imported to the Site as clean fill is included in **Appendix R**. A total of approximately 22,382 CY of material was used to backfill the excavations to existing grade. The final cover consisted of crushed stone as a dust protection measure pending final development of the Site and completion of the soil cap.

Soils and rocks re-used on-Site originated from the by U & G Development Site located at 7401 River Road, North Bergen, Bergen County, New Jersey, also known as Tax Assessor Block 316 Lot 12.1 & 12.2. Prior to these construction activities, this area was undeveloped. This Site is owned by U & G Development of Paramus, New Jersey who is developing the 7401 Property.

#### **4.7 REMEDIAL ACTION COST**

The table below summarizes the costs expended to date to implement and report all remedial activities associated with the above-referenced RAs.

Tasks	Costs
Consulting and Laboratory	\$ 325,000

Soil Excavation/Disposal and Site Work	\$ 2,773,306
Air Monitoring	\$ 246,000
Total	\$ 3,344,306

---

#### **4.8 REMEDIAL ACTION COSTS FOR ENGINEERING AND INSTITUTIONAL CONTROLS**

---

The table below summarizes the costs to monitor, maintain and certify the protectiveness of the Site’s engineering and institutional controls.

Tasks	Costs
Groundwater Sampling and Reporting (quarterly)	\$ 23,800
Biennial Certifications (each)	\$ 3,000

#### **5.0 CONCLUSIONS**

The Remedial Action implemented as described in this document successfully accomplished the following remedial objectives as identified in the RAWPs:

- Removal and disposal of identified on-Site soils containing soft-pitch that impacted groundwater, except for the potential pitch area under Building E2;
- Removal and disposal of identified arsenic-impacted on-Site soils exceeding the alternative remedial standard of 600 ppm; and
- Removal of the direct contact exposure pathway.

Going forward, a groundwater monitoring program in conjunction with a CEA will eliminate the direct exposure to groundwater pathway. In addition, the groundwater cut-off wall proposed along the Hudson River will limit the discharge of impacted groundwater to sediment and surface water.

#### **6.0 ON-GOING ACTIVITIES**

During development activities, additional soil remedial measures will be implemented. These include the installation of a cap consisting of asphalt roadways, concrete

- Removal and disposal of identified arsenic-impacted on-Site soils exceeding the alternative remedial standard of 600 ppm; and
- Removal of the direct contact exposure pathway.

Going forward, a groundwater monitoring program in conjunction with a CEA will eliminate the direct exposure to groundwater pathway. In addition, the groundwater cut-off wall proposed along the Hudson River will limit the discharge of impacted groundwater to sediment and surface water.

## 6.0 ON-GOING ACTIVITIES

During development activities, additional soil remedial measures will be implemented. These include the installation of a cap consisting of asphalt roadways, concrete building foundations, walkways, or two feet of clean fill. The following is a summary of the engineering caps that are/will be installed on-Site. Detailed drawings are included in **Figures 14** through **Figures 19**.

The pavement cap covering the roads and parking lot areas of the Site, will consist of compacted existing subgrade to 95% modified proctor density, 5-inch sub-base dense graded aggregate, and 4-inch bituminous stabilized base course topped with a 2-inches of bituminous concrete surface course.

The concrete cap covering the sidewalk areas, will consist of compacted existing subgrade, topped with a 4-inches of  $\frac{3}{4}$ -inch clean crushed stone and 4-inches of concrete.

The elevation of the RAA-1, RAA-2 and RAA-5 site will be brought up approximately two feet from the current ground surface with clean fill and gravel. New Site buildings will be seated on a concrete slab that is 8 inches thick, and will have a gas vapor barrier and ventilation system consisting of 8 inches of crushed stone, a nonwoven drainage geotextile layer, and 20-ml HDPE. Five inches of concrete will be poured on top of the gas vapor barrier and ventilation system.

Landscaped areas will consist of 6 inches of drainage layer and 18 inches of certified clean fill/top soil to protect the public from direct exposure to contaminants in the soil. The vegetation will consist of species specified by the Borough of Edgewater.

In addition to the RA discussed above, several additional RAs will be conducted as part of the site-wide remediation. These RAs were presented in the Revised RAWP dated June 2008 and include the installation of a groundwater barrier wall along the Hudson River and the installation of water tight storm water pipes with “water stops” consisting of bentonite backfill or equivalent.

## CONSUMER CONFIDENCE REPORT

Veolia Water New Jersey Hackensack PWSID # NJ0238001  
2021 ANNUAL DRINKING WATER QUALITY Report - Issued May 2022

SUEZ is excited to announce that it has completed its merger with Veolia. As always, we remain committed to bringing you best-in-class water services, providing life's most essential resource for your daily needs, and having an active presence in your local community.

### What does this mean for you?

Our phone numbers and addresses, your account number, the way you pay your bill, and your rates will remain unchanged. You can expect the same level of commitment to service and to water quality you have always had, with the same local team dedicated to providing you with essential water services.

In the coming months, our website, social media channels, service trucks, and uniforms will only have the Veolia name. We will provide you with notification before any change occurs.

### Who is Veolia?

With nearly 179,000 employees worldwide, the company designs and provides water, waste, and energy management solutions which contribute to the sustainable development of communities and industries. Veolia operates 8,500 water and wastewater facilities around the world and currently serves over 550 communities in North America.

### Stronger together

SUEZ and Veolia are stronger together, bringing an unwavering commitment to operational safety and compliance with a wealth of experience and resources. We believe that together we can better serve your needs, while accelerating innovation to bring you more choice, greater possibilities, and improved water quality and service.

For more information, please visit [www.mysuezwater.com/merger](http://www.mysuezwater.com/merger).

## INTRODUCTION

Providing clean, safe drinking water to you is our top priority. That's why we're pleased to present your annual Consumer Confidence Report (CCR) that details the results of the most recent water quality tests performed on your drinking water through the end of 2021. We do not hold regular public meetings.

If at any time you have questions about your water quality or delivery, please call us at **800.422.5987** or visit us on the web at [www.mysuezwater.com](http://www.mysuezwater.com). We want you to be informed about your water supply.

**If you are a landlord, you must distribute this Drinking Water Quality Report to every tenant as soon as practicable, but no later than three business days after receipt. Delivery must be done by hand, mail, or email, and by posting the information in a prominent location at the entrance of each rental premises, pursuant to section #3 of NJ P.L. 2021, c.82 (C.58:12A-12.4 et seq.).**

## WHERE DOES OUR WATER SUPPLY COME FROM?

Our customers in portions of Bergen and Hudson counties receive their water primarily from four reservoirs – the Oradell, Woodcliff Lake, and Lake Tappan reservoirs in Bergen County, New Jersey, and Lake DeForest in Rockland County, New York. Lake DeForest and Lake Tappan reservoirs are located on the upper or freshwater portion of the Hackensack River. Woodcliff Lake reservoir is located on the Pascack Brook, while the Oradell reservoir is fed by both the Hackensack River and the Pascack Brook. Together they hold about 14 billion gallons of water and cover nearly 6,000 acres. Water from these surface supplies are treated to meet safe drinking water standards at the Haworth Water Treatment Plant.

From time to time, you may receive water from sources through interconnections with other water suppliers including the Boonton and Monksville reservoirs. Through these pipelines we are able to supplement water supplies to meet customer needs. You may also receive treated water from the City of Jersey City, our New York operations in Rockland County, the Park Ridge Water Department, the Passaic Valley Water Commission, or Ridgewood Water. In addition, we are partners with the North Jersey District Water Supply Commission in the Wanaque South Project. This is a regional

network of pipelines, pumping stations, and reservoirs that can provide up to 60 million gallons of water per day to our customers. Information about the sources we used last year is provided in this report.

## ABOUT THE TREATMENT PROCESS

Our goal is to provide you with drinking water that meets or surpasses all federal and state standards. Our water treatment plant in Haworth, New Jersey, uses ozone, a form of oxygen, to purify your water and high-rate dissolved air flotation (DAF) for sedimentation clarification. State-of-the-art DAF technology facilitates improved water quality, enhanced service reliability, reduced chemical and energy usage, and the protection of sensitive ecosystems. Sulfuric acid and sodium hydroxide are added for pH adjustment. A corrosion inhibitor is added at the plant to reduce the possibility of lead and copper dissolving into the water of household plumbing. Water treated at the plant is also filtered and contains a small amount of chloramine — a combination of chlorine and ammonia — to help ensure the safety of your water. The water you receive from wells or interconnections with other water suppliers is purified with chlorine. To further ensure the safety of your water, we monitor it before, during, and after the treatment process. For example, we routinely test the water at the rivers, lakes, streams, and wells that supply drinking water. We also sample and test treated water directly from the distribution system in each community we serve. As you can see, we are committed to providing you with top quality water.

## SOURCE WATER ASSESSMENT PROGRAM

Under the Federal Safe Drinking Water Act, all states were required to establish a Source Water Assessment Program (SWAP). New Jersey's SWAP Plan incorporates the following four fundamental steps:

1. Determine the source water assessment area of each ground and surface water source of public drinking water.
2. Inventory the potential contamination sources within the source water assessment area.
3. Determine the public water system source's susceptibility to regulated contaminants. It is important to note, if a drinking water source's susceptibility is high, it does not necessarily mean the drinking water is contaminated. The rating reflects the potential for contamination of source water, not the existence of contamination.
4. Incorporate public education and participation.

In 2004, source water assessment reports were completed by NJDEP for all Community and Noncommunity Water Systems in New Jersey. The source water assessment reports and supporting documentation are available at <http://www.state.nj.us/dep/swap/index.html> or by contacting the NJDEP's Bureau of Safe Drinking Water at **609.292.5550**.

## SUSCEPTIBILITY RATINGS FOR HACKENSACK SOURCES

The table below illustrates the susceptibility ratings for the seven contaminant categories (and radon) for each source in the system. The table provides the number of wells and intakes that rated high (H), medium (M), or low (L) for each contaminant category. For susceptibility ratings of purchased water, refer to the specific water system's source water assessment report.

The seven contaminant categories are defined at the bottom of this page. DEP considered all surface water highly susceptible to pathogens, therefore all intakes received a high rating for the pathogen category. For the purpose of Source Water Assessment Program, radionuclides are more of a concern for groundwater than surface water. As a result, surface water intakes' susceptibility to radionuclides was not determined and they all received a low rating.

**If a system is rated highly susceptible for a contaminant category, it does not mean a customer is or will be consuming contaminated drinking water. The rating reflects the potential for contamination of source water, not the existence of contamination.** Public water systems are required to monitor for regulated contaminants and to install treatment if any contaminants are detected at frequencies and concentrations above allowable levels. As a result of the assessments, DEP may customize (change existing) monitoring schedules based on the susceptibility ratings.

If you have questions regarding the source water assessment report or summary please contact the Bureau of Safe Drinking Water at [swap@dep.state.nj.us](mailto:swap@dep.state.nj.us) or **609.292.5550**. The source water assessment performed on our sources of water determined the following:

## Veolia Water New Jersey Hackensack (PWSID # NJ0238001)

Sources	Pathogens			Nutrients			Pesticides			Volatile Organic Compounds			Inorganics			Radio-nuclides			Radon			Disinfection Byproduct Precursors		
	H	M	L	H	M	L	H	M	L	H	M	L	H	M	L	H	M	L	H	M	L	H	M	L
Wells - 9	2	5	1	5	3			4	4	7		1	8			5	3		8			2	6	
GUDI - 0																								
Surface water intakes - 6	6			2	4			1	5	2	3	1	5	1				6			6	6		

This system purchases water from Jersey City MUA. A link to the source water assessment reports and supporting documentation are available at <http://www.state.nj.us/dep/swap/index.html> or by contacting the NJDEP's Bureau of Safe Drinking Water at **609.292.5550** or [watersupply@dep.nj.gov](mailto:watersupply@dep.nj.gov).

- **Pathogens:** Disease-causing organisms such as bacteria and viruses. Common sources are animal and human fecal wastes.
- **Nutrients:** Compounds, minerals, and elements that aid growth, that are both naturally occurring and man-made. Examples include nitrogen and phosphorus.
- **Volatile Organic Compounds:** Man-made chemicals used as solvents, degreasers, and gasoline components. Examples include benzene, methyl tertiary butyl ether (MTBE), and vinyl chloride.
- **Pesticides:** Man-made chemicals used to control pests, weeds, and fungus. Common sources include land application and manufacturing centers of pesticides. Examples include herbicides such as atrazine, and insecticides such as chlordane.
- **Inorganics:** Mineral-based compounds that are both naturally occurring and man-made. Examples include arsenic, asbestos, copper, lead, and nitrate.
- **Radionuclides:** Radioactive substances that are both naturally occurring and man-made. Examples include radium and uranium.
- **Radon:** Colorless, odorless, cancer-causing gas that occurs naturally in the environment. For more information go to <http://www.nj.gov/dep/rpp/radon/index.htm> or call **800.648.0394**.
- **Disinfection By-product Precursors:** A common source is naturally occurring organic matter in surface water. Disinfection byproducts are formed when the disinfectants (usually chlorine) used to kill pathogens react with dissolved organic material (for example leaves) present in surface water.

### TAP OR BOTTLED WATER?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA Safe Drinking Water Hotline at **800.426.4791**.

The sources of drinking water (for both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities.

In order to ensure that the water is safe to drink, the EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. So, what's the bottom line? If bottled and tap water meet the federal standards, they are both safe to drink. However, your tap water is substantially less expensive than bottled water.

## MONITORING YOUR WATER

We routinely monitor for contaminants in your drinking water according to **EPA** and **NJDEP** regulations. The following tables in this report show the results of our monitoring for the period of January 1 to December 31, 2021. **EPA** allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

### DEFINITIONS:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Locational Running Annual Average (LRAA): The average of four consecutive quarterly samples at a single sample site.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectant to control microbial contamination.

Nephelometric Turbidity Unit (NTU): A measure of the clarity of water.

Non-Detect (ND): Not detectable.

Not Analyzed or Not Applicable (NA): Analysis of the constituent is not required, or no applicable regulatory standard exists.

Parts per million (ppm) or milligrams per liter (mg/L): Corresponds to one part of liquid in one million parts of liquid.

Parts per billion (ppb) or micrograms per liter (µg/L): Corresponds to one part of liquid in one billion parts of liquid.

Parts per trillion (ppt) or nanograms per liter (ng/L): Corresponds to one part of liquid in one trillion parts of liquid.

Picocuries per liter (pCi/L): Picocuries per liter is a measure of the radioactivity in water.

Primary Standard: Federal drinking water measurements for substances that are health-related. Water supplier must meet all primary drinking water standards.

Running Annual Average (RAA): The average of four consecutive quarterly samples.

Secondary Standard: Federal drinking water measurements for substances that do not have an impact on health. These reflect aesthetic qualities such as taste, odor, and appearance. Secondary standards are recommendations, not mandates.

Treatment Technique (TT): A required process intended to reduce the level or likelihood of a contaminant in drinking water.

CU: Color unit.

RUL: Recommended upper limit.

S.U.: Standard unit.

< "less than." – often used when the contaminant is not detectable using the approved analysis method.

## WATER QUALITY RESULTS – TABLE OF DETECTED CONTAMINANTS

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

### Veolia Water New Jersey Hackensack (PWSID # NJ0238001) – Primary Standards

Contaminant	Violation Yes/No	Sample Year	Highest Level Detected (Range of Results)	Unit Measure	MCLG	Regulatory Limit	Likely Sources in Drinking Water
<b>Microbiological Contaminants</b>							
Turbidity <sup>1</sup>	No	2021	Highest level detected: 0.32 Range: 0.03 – 0.32  100% of samples <0.3NTU	NTU	NA	TT=<1.0 NTU and 95% of samples <0.3NTU	Soil runoff
<b>Inorganic Contaminants</b>							
Arsenic	No	2021	Highest level detected: 0.708	ppb	0	5	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
Barium	No	2021	Highest level detected: 0.0746	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chromium (Total)	No	2021	Highest level detected: 3.73	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
Copper <sup>2</sup>	No	1/1/2021 – 6/30/2021	90th percentile: 0.0475 Range: ND – 0.295 # samples above Action Level: 0 of 117	ppm	1.3	AL = 1.3	Corrosion of household plumbing systems; erosion of natural deposits
Copper <sup>2</sup>	No	7/1/2021 – 12/31/2021	90th percentile: 0.0416 Range: ND – 0.140 # samples above Action Level: 0 of 113	ppm	1.3	AL = 1.3	Corrosion of household plumbing systems; erosion of natural deposits
Lead <sup>3</sup>	No	1/1/2021 – 6/30/2021	90th percentile: 6.14 Range: ND – 16.6 # samples above Action Level: 1 of 117	ppb	0	AL = 15	Lead service lines, corrosion of household plumbing including fittings and fixtures; erosion of natural deposits

Lead <sup>3</sup>	No	7/1/2021 – 12/31/2021	90th percentile: 6.12 Range: ND – 17.3 # samples above Action Level: 1 of 113	ppb	0	AL = 15	Lead service lines, corrosion of household plumbing including fittings and fixtures; erosion of natural deposits
Nickel	No	2021	Highest level detected: 2.89	ppb	NA	NA	Erosion of natural deposits
Nitrate as nitrogen	No	2021	Highest level detected <sup>4</sup> : 0.77 Range: 0.02 – 0.77	ppm	10	10	Runoff from fertilizer usage; leaching from septic tanks, sewage; erosion of natural deposits
Nitrite as nitrogen	No	2021	Highest level detected: 0.0881 Range: ND – 0.0881	ppm	1	1	Runoff from fertilizer usage; leaching from septic tanks, sewage; erosion of natural deposits
Total Nitrate and Nitrite	No	2021	Highest level detected: 0.77 Range: 0.02 – 0.77	ppm	10	10	Runoff from fertilizer usage; leaching from septic tanks, sewage; erosion of natural deposits
<b>Organic Contaminants - Volatile</b>							
Toluene	No	2021	Highest level detected: 0.905	ppb	1000	1000	Discharge from petroleum refineries
<b>Disinfectants</b>							
Chloramines	No	2021	Highest annual average: 2.40 Range: ND – 3.89	ppm	MRDLG: 4.0	MRDL: 4.0	Water additive to control microbes
<b>Disinfection By-Products</b>							
TTHM (Total Trihalomethanes)	No	2021	Highest LRAA: 39.3 Range: 17.17 – 64.5	ppb	NA	80	By-product of drinking water disinfection
HAA5 (Haloacetic Acids)	No	2021	Highest LRAA: 17.5 Range: ND – 36	ppb	NA	60	By-product of drinking water disinfection
Bromate	No	2021	Highest RAA: 1.7 Range: ND – 3.0	ppb	0	10	By-product of drinking water disinfection
<b>Perfluoroalkyl Substance</b>							
PFOA	No	2021	Highest RAA: 9.7 Range: 8.24 – 11.2	ppt	NA	14	Used in manufacturing of fluoropolymers, firefighting foams, cleaners, cosmetics, greases, lubricants, paints, polishes, adhesives, and photographic films

PFOS	No	2021	Highest RAA: 3.7 Range: 2.87 – 4.73	ppt	NA	13	Used in firefighting foam, circuit board etching, cleaners, floor polish, and pesticides
<b>Lead and Copper – Water Quality Parameters</b>							
<b>Treatment Plant (TP011020)</b>							
Parameters	Sample Year	Minimum Level Detected	Maximum Level Detected	Unit Measure	MCLG	Required Minimum Level	Number of Excursions
pH	2021	7.85	8.33	s.u.	NA	NA	NA
Orthophosphate (as Total P)	2021	0.57	0.85	ppm	NA	NA	NA
<b>Distribution System</b>							
Parameters	Sample Year	Minimum Level Detected	Maximum Level Detected	Unit Measure	MCLG	Required Minimum Level	Number of Excursions
pH	2021	7.38	8.46	s.u.	NA	NA	NA
Alkalinity (as CaCO <sub>3</sub> )	2021	41	122	ppm	NA	NA	NA
Orthophosphate (as Total P)	2021	0.43	1.02	ppm	NA	NA	NA
<b>VWNJ Interconnection (CC002002)</b>							
Parameters	Sample Year	Minimum Level Detected	Maximum Level Detected	Unit Measure	MCLG	Required Minimum Level	Number of Excursions
pH	2021	7.07	8.04	s.u.	NA	NA	NA
Alkalinity (as CaCO <sub>3</sub> )	2021	37	59	ppm	NA	NA	NA
Orthophosphate (as Total P)	2021	0.66	1.63	ppm	NA	NA	NA
<b>VWNJ Interconnection (CC012021)</b>							
Parameters	Sample Year	Minimum Level Detected	Maximum Level Detected	Unit Measure	MCLG	Required Minimum Level	Number of Excursions
pH	2021	6.89	7.8	s.u.	NA	NA	NA
Alkalinity (as CaCO <sub>3</sub> )	2021	37	72	ppm	NA	NA	NA
Orthophosphate (as Total P)	2021	0.73	1.15	ppm	NA	NA	NA

In addition to the contaminants listed above, for which Federal and/or State regulations limits have been established and regular monitoring is required, we may also occasionally test for unregulated contaminants to determine occurrence data and provide input to regulatory agencies that are considering these contaminants for future regulations. This data is presented below.

<b>Unregulated Contaminants</b>			
Contaminants	Sample Year	Highest Level Detected	Units
1,4-Dioxane	2021	0.026	ppb
PFHpA	2021	3.83	ppt

PFHxS	2021	3.52	ppt
PFHxA	2021	4.04	ppt
HAA5	2019	28.64	ppb
HAA6Br	2019	14.51	ppb
HAA9	2019	41.47	ppb
Manganese	2019	37.7	ppb

Secondary standards are non-mandatory guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. These contaminants are not considered to present a risk to human health.

Secondary Standards				
Contaminants	Sample Year	Highest Level Detected	Units	RUL
Alkalinity	2021	123	ppm	NA
Aluminum	2021	128	ppb	200
Calcium	2021	50.88	ppm	NA
Chloride	2021	228	ppm	250
Color	2021	3	CU	10
Hardness (as CaCO <sub>3</sub> )	2021	187	ppm	250
pH	2021	8.33	s.u.	6.5 – 8.5
Sodium <sup>5</sup>	2021	131.4	ppm	50
Sulfate	2021	18.4	ppm	250
Total Dissolved Solids	2021	513	ppm	500
Zinc	2021	0.449	ppm	5

**Notes:**

1. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the water quality. High turbidity can hinder the effectiveness of disinfectants. State regulations require that turbidity must always be below 1 NTU at the treatment system. State regulations require that turbidity must always be below 5 NTU in the distribution system and that 95% of the turbidity samples collected (at the treatment system entry point) have measurements below 0.3 NTU.
2. The Copper level presented represents the 90th percentile of the sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90th percentile is equal to or greater than 90% of the copper values detected at your water system.
3. The Lead level presented represents the 90th percentile of the sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90th percentile is equal to or greater than 90% of the lead values detected at your water system.
4. We are required to take one sample per year, however, we are voluntarily sampling on a weekly basis.
5. This result was above New Jersey's Recommended Upper Limit [RUL] for sodium. For healthy individuals, the sodium intake from water is not important because a much greater intake of sodium takes place from salt in the diet. However, sodium levels above the RUL may be of concern to individuals on a sodium restricted diet. Road salt run-off affecting our source water quality is the leading cause of elevated sodium levels in the drinking water supply. We are meeting with communities within our source water area to discuss options for minimizing use of and/or alternatives to road salt.

**WAIVER INFORMATION**

The Safe Drinking Water Act (SDWA) regulations allow monitoring waivers to reduce or eliminate the monitoring requirements for asbestos, volatile organic chemicals (VOCs) and synthetic organic chemicals (SOCs). Our system received monitoring waivers for asbestos because we are not vulnerable to this type of contamination. NJDEP issued SOC waivers to many community water systems in the 3-year cycle (2017-2019). We expect to complete the next round of sampling or receive a waiver prior to the end of the cycle.

## SOURCES OF LEAD IN DRINKING WATER

Although most lead exposure occurs from inhaling dust or from contaminated soil, or when children eat paint chips, the U.S. Environmental Protection Agency (USEPA) estimates that 10 to 20 percent of human exposure to lead may come from lead in drinking water. Infants who consume mostly mixed formula can receive 40 percent to 60 percent of their exposure to lead from drinking water. Lead is rarely found in the source of your drinking water but enters tap water through corrosion, or wearing away, of materials containing lead in the water distribution system and household plumbing materials. These materials include lead-based solder used to join copper pipes, brass, and chrome-brass faucets, and in some cases, service lines made of or lined with lead. New brass faucets, fittings, and valves, including those advertised as “lead-free”, may still contain a small percentage of lead, and contribute lead to drinking water. The law currently allows end-use brass fixtures, such as faucets, with up to 0.25 percent lead to be labeled as “lead free”. However, prior to January 4, 2014, “lead free” allowed up to 8 percent lead content of the wetted surfaces of plumbing products including those labeled National Sanitation Foundation (NSF) certified. Visit the NSF website at [www.nsf.org](http://www.nsf.org) to learn more about lead-containing plumbing fixtures. Consumers should be aware of this when choosing fixtures and take appropriate precautions. When water stands in lead service lines, lead pipes, or plumbing systems containing lead for several hours or more, the lead may dissolve into your drinking water. This means the first water drawn from the tap in the morning, or later in the afternoon if the water has not been used all day, can contain fairly high levels of lead.

## STEPS YOU CAN TAKE TO REDUCE EXPOSURE TO LEAD IN DRINKING WATER

For a full list of steps visit: <https://www.state.nj.us/dep/watersupply/dwc-lead-consumer.html>

- **Run the cold water to flush out lead.** Let the water run from the tap before using it for drinking or cooking any time the water in the faucet has gone unused for more than six hours. The longer the water resides in plumbing the more lead it may contain. Flushing the tap means running the cold-water faucet. Let the water run from the cold-water tap based on the length of the lead service line and the plumbing configuration in your home. In other words, the larger the home or building and the greater the distance to the water main (in the street), the more water it will take to flush properly. Although toilet flushing or showering flushes water through a portion of the plumbing system, you still need to flush the water in each faucet before using it for drinking or cooking. Flushing tap water is a simple and inexpensive measure you can take to protect your health. It usually uses less than one gallon of water.
- **Use cold, flushed water for cooking and preparing baby formula.** Because lead from lead-containing plumbing materials and pipes can dissolve into hot water more easily than cold water, never drink, cook, or prepare beverages including baby formula using hot water from the tap. If you have not had your water sampled or if you know your water has lead, it is recommended that bottled or filtered water be used for drinking and preparing baby formula. If you need hot water, draw water from the cold tap and then heat it.
- **Do not boil water to remove lead.** Boiling water will not reduce lead; however, it is still safe to wash dishes and do laundry. Lead will not soak into dishware or most clothes.
- **Use alternative sources or treatment of water.** You may want to consider purchasing bottled water or a water filter. Read the package to be sure the filter is approved to reduce lead or contact NSF International at 800-NSF-8010 or [www.nsf.org](http://www.nsf.org) for information on performance standards for water filters.
- **Determine if you have interior lead plumbing or solder.** If your home/building was constructed prior to 1987, it is important to determine if interior lead solder or lead pipes are present. You can check yourself, hire a licensed plumber, or check with your landlord.
- **Replace plumbing fixtures and service lines containing lead.** Replace brass faucets, fittings, and valves that do not meet the current definition of “lead free” from 2014 (as explained above). Visit the NSF website at [www.nsf.org](http://www.nsf.org) to learn more about lead-containing plumbing fixtures.
- **Remove and clean aerators/screens on plumbing fixtures.** Over time, particles and sediment can collect in the aerator screen. Regularly remove and clean aerators screens located at the tip of faucets and remove any particles.
- **Test your water for lead.** Contact an independent lab to have the drinking water tested for lead. The NJDEP maintains a list of certified labs. To access the list please visit <http://www13.state.nj.us/DataMiner>, click Search by Category then Certified Laboratories from the Report Category drop down box. Then click the Submit button, and under Certified Laboratories choose Drinking Water Certified Lead Labs. Testing is essential because you cannot see, taste, or smell lead in drinking water.

- **Get your child tested.** Contact your local health department or healthcare provider to find out how you can get tested for lead if you are concerned about lead exposure. You can find out more about how to get your child tested and how to pay for it at <https://www.state.nj.us/health/childhoodlead/testing.shtml>. New Jersey law requires that children be tested for lead in their blood at both 1 and 2 years of age and before they are 6 years old if they have never been tested before or if they have been exposed to a known source of lead.
- **Have an electrician check your wiring.** If grounding wires from the electrical system are attached to your pipes, corrosion may be greater. Check with a licensed electrician or your local electrical code to determine if your wiring can be grounded elsewhere. DO NOT attempt to change the wiring yourself because improper grounding can cause electrical shock and fire hazards.
- **Water softeners and reverse osmosis units** will remove lead from water but can also make the water more corrosive to lead solder and plumbing by removing certain minerals; therefore, the installation of these treatment units at the point of entry into homes with lead plumbing should only be done under supervision of a qualified water treatment professional.

We also published an inventory of our system as an interactive map, available at: <https://www.mysuezwater.com/new-jersey/water-in-my-area/service-lines>

If you want to pass on more information to your residents, please consider these:

- What's a lead service line? <https://www.nj.gov/dep/lead/images/lead-pipes-infographic.jpg>

#### HEALTH EFFECTS OF LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

For more information, please call **1.800.422.5987**.  
State Water System ID#: NJ0238001 (Veolia Water New Jersey Hackensack)

#### SUPPLEMENTAL SOURCE OF SUPPLY DATA

In 2021, we purchased water from neighboring Jersey City MUA to supplement its source of supply. This insert contains the water quality data from that source. Additional information about this supplement supply source can be found by visiting the following website:

[www.mysuezwater.com/JerseyCityCCR2021](http://www.mysuezwater.com/JerseyCityCCR2021)

Jersey City MUA

PWSID # NJ0906001

2021 Water Quality Data

#### WATER QUALITY RESULTS – TABLE OF DETECTED CONTAMINANTS

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

Regulated Contaminants								
Inorganic Contaminants	Units	MCLG	MCL	Min	Max	Year	Violation	Sources in Drinking Water
Barium	ppm	2	2	0.020	0.020	2021	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Nitrate as N	ppm	10	10	0.34	0.48	2021	No	Runoff from fertilizer usage; leaching from septic tanks, sewage; erosion of natural deposits
Total Nitrate and Nitrite	ppm	10	10	0.34	0.48	2021	No	Runoff from fertilizer usage; leaching from septic tanks, sewage; erosion of natural deposits

Disinfection & Disinfection By-Products	Units	MCLG	MCL	Min	Max	RAA	Year	Violation	Sources in Drinking Water
Total trihalomethanes (TTHMs)	ppb	N/A	80	24.9	72.4	50.0	2021	No	By-product of drinking water disinfection
Haloacetic Acids (HAA5)	ppb	N/A	60	18.0	64.5	36.5	2021	No	By-product of drinking water disinfection
	Units	MRDLG	MRDL	Min	Max	MAX RAA	Year	Violation	Sources in Drinking Water
Chlorine as Cl2	ppm	4	4	0.31	1.50	0.90	2021	No	Water additive to control microbes

Lead and Copper	Units	MCLG	AL	90th Pctl	# Sites >AL	Year	Violation	Sources in Drinking Water
Lead	ppb	0	15	4.5	0	2021	No	Lead service lines, corrosion of household plumbing including fittings and fixtures; erosion of natural deposits
Copper	ppm	1.3	1.3	0.112	0	2021	No	Corrosion of household plumbing systems; erosion of natural deposits.
Lead and Copper Water Quality Parameters	Units	Min	Max	Min	Max	Year	Violation	

Treatment Plant (TP001002)								
pH	SU	7.0	N/A	7.0	7.6	2021	No	Natural property of water that may be adjusted with treatment to optimize water quality
Alkalinity	mg/L as CaCO3	N/A	N/A	38	62	2021	No	Natural property of water that may be adjusted with treatment to optimize water quality
Orthophosphate	mg/L as Total P	0.2	N/A	0.47	1.16	2021	No	Water additive to provide corrosion control treatment

Distribution System								
pH	SU	7.0	N/A	7.09	7.46	2021	No	Natural property of water that may be adjusted with treatment to optimize water quality
Alkalinity	mg/L as CaCO3	N/A	N/A				No	Natural property of water that may be adjusted with treatment to optimize water quality
Orthophosphate	mg/L as Total P	0.1	N/A	0.53	1.09	2021	No	Water additive to provide corrosion control treatment

Surface Water/ GWUDI Systems	Units	MCLG	MCL	Min	Max	% > 0.3	Year	Violation	Sources in Drinking Water
Turbidity	NTU	N/A	5% >0.3	0.04	0.23	0.0%	2021	No	Soil runoff
Microbiological	Units	MCLG	MCL	Min	Max		Year	Violation	Sources in Drinking Water
E. Coli	# positive	0	0	0	0		2021	No	Human and animal fecal waste
Total Coliforms	% positive	0	5%	0%	2%		2021	No	Naturally present in the environment

Perfluoroalkyl Substance	Units	MRL	MCL	Min	Max	Highest RAA	Year	Violation	Sources in Drinking Water
PFOA	ppb	0.02	0.014	0.004	0.007	0.0055	2021	No	Used in manufacturer of fluoropolymers, firefighting foams, cleaners, cosmetics, greases, lubricants, paints, polishes, adhesives and photographic films
PFOS	ppb	0.04	0.013	0.005	0.010	0.0076	2021	No	Used in firefighting foam, circuit board etching, cleaners, floor polish, and pesticides

Unregulated Contaminants	Units	MRL	Min	Max	Year	Sources in Drinking Water
PFHpA	ppb	0.01	ND	0.005	2021	Used in products to make them stain, grease, heat and water resistant
PFHxS	ppb	0.03	0.004	0.006	2021	Used in products to make them stain, grease, heat and water resistant

UCMR4-Additional Contaminants						
HAA5	ppb	N/A	15.4	42.1	2020	By-product of drinking water disinfection
HAA6Br	ppb	N/A	6.5	12.3	2020	By-product of drinking water disinfection
HAA9	ppb	N/A	22.4	50.8	2020	By-product of drinking water disinfection
Manganese	ppb	0.4	0.58	2.17	2020	Naturally occurring element

## Secondary Standards- Water quality parameters related to the aesthetic quality of drinking water

Secondary standards are non-mandatory guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. These contaminants are not considered to present a risk to human health.

Secondary Standards	Units	RUL	Min	Max	Year	RUL Exceeded?	Sources in Drinking Water
Alkalinity	ppm		38	62	2021	No	
Aluminum	ppm	0.2	ND	0.05	2021	No	Naturally occurring element
Calcium	ppm	N/A	13	22	2021		
Chloride	ppm	250	66	138	2021	No	Naturally occurring element
Color	CU	10	ND	3	2021	No	Naturally occurring organic matter
Conductivity	umhos	N/A	262	581	2021		
Copper	ppm	1	ND	0.08	2021	No	Naturally occurring element, corrosion of household plumbing
Hardness (as CaCO <sub>3</sub> )	ppm	250	62	218	2021	No	Naturally occurring element
Iron	ppm	0.3	ND	0.29	2021	No	Naturally occurring element, leaching from metal pipes
pH	SU	6.5 - 8.5	7.00	7.60	2021	No	Natural property of water
Sodium	ppm	50	32	78	2021	Yes	Naturally occurring element
Sulfate	ppm	250	9	9	2021	No	Naturally occurring element
Total Dissolved Solids	ppm	500	161	303	2021	No	Minerals and salts dissolved in the water
Zinc	ppm	5	ND	0.05	2021	No	Naturally occurring element

### Notes:

1. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the water quality. High turbidity can hinder the effectiveness of disinfectants. State regulations require that turbidity must always be below 1 NTU at the treatment system. State regulations require that turbidity must always be below 5 NTU in the distribution system and that 95% of the turbidity samples collected (at the treatment system entry point) have measurements below 0.3 NTU.

2. The Copper level presented represents the 90th percentile of the 53 sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90th percentile is equal to or greater than 90% of the copper values detected at your water system. In this case, 53 samples were collected at your water system and the 90th percentile value was 0.112 ppm with the highest being 0.152 ppm. The action level for copper was not exceeded at any of the sites tested.
3. The Lead level presented represents the 90th percentile of the 53 sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90th percentile is equal to or greater than 90% of the lead values detected at your water system. In this case, 53 samples were collected at your water system and the 90th percentile value was 4.5 ppb with the highest being 12.9 ppb. The action level for lead was not exceeded at any of the sites tested.
4. This result was above New Jersey's Recommended Upper Limit [RUL] for sodium. For healthy individuals, the sodium intake from water is not important because a much greater intake of sodium takes place from salt in the diet. However, sodium levels above the RUL may be of concern to individuals on a sodium restricted diet. Road salt run-off affecting our source water quality is the leading cause of elevated sodium levels in the drinking water supply. We are meeting with communities within our source water area to discuss options for minimizing use of and/or alternatives to road salt.

***This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.***

# NEW JERSEY - EPA Map of Radon Zones

<http://www.epa.gov/radon/zonemap.html>

The purpose of this map is to assist National, State and local organizations to target their resources and to implement radon-resistant building codes.

This map is not intended to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones.

**All homes should be tested, regardless of zone designation.**

**IMPORTANT:** Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of New Jersey" (USGS Open-file Report 93-292-B) before using this map. <http://energy.cr.usgs.gov/radon/grpinfo.html> This document contains information on radon potential variations within counties. EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

Zone 1

Zone 2

Zone 3

# **APPENDIX G: Qualifications of Environmental Professionals**

## SARAH OHLMEIER, EP SENIOR PROJECT MANAGER

### PROFESSIONAL EDUCATION

Bachelor of Arts, Geology, Colorado College, Colorado Springs, CO, 2003

### CERTIFICATIONS/QUALIFICATIONS

- ◆ Environmental Professional (EP) in Accordance with ASTM E1527-13
- ◆ AHERA Certified Asbestos Inspector
- ◆ AHERA Certified Asbestos Management Planner
- ◆ OSHA 40-Hour HAZWOPER Training, Supervisor, and Annual 8-Hour Refresher
- ◆ HAZMAT for Portable Gauges
- ◆ Nuclear Density Gauge Operations and Radiological Safety
- ◆ Termites and Other Wood Destroying Pests Training
- ◆ Environmental Site Assessment (ESA) Experience, 15+ years

### SELECTED EXPERIENCE

Mrs. Ohlmeier is a Senior Project Manager with more than 15 years of professional experience in the environmental and geotechnical consulting industry. In this capacity, she is responsible for conducting and managing Phase I ESAs, Phase II subsurface investigations, hazardous materials inspections, geotechnical investigations, and other related services for various clients, including private owners/investors, governmental agencies, lending institutions, real estate investment trusts, and attorneys. Her experience includes the assessment of various types of real estate, including development land, agricultural, commercial, medical, retail, single and multifamily residential, hospitality, and industrial. Mrs. Ohlmeier maintains expertise in environmental rules and regulations pertaining to the environmental consulting industry, including ASTM E1527, USEPA All Appropriate Inquiry (AAI) rules, Fannie Mae Delegated Underwriting Standards (DUS), Freddie Mac guidelines, and client-specific scopes of work.

### PHASE I ESAs

Mrs. Ohlmeier has conducted and reviewed thousands of Phase I ESAs throughout the United States in accordance with ASTM E1527, and the USEPA All Appropriate Inquire rule. The properties include gas stations, automobile dealerships, manufacturing and industrial facilities, multi-tenant commercial buildings, dry cleaning facilities, residential subdivisions, and undeveloped land.

### PHASE II ESAs AND REMEDIATION OVERSIGHT

Mrs. Ohlmeier is proficient in the management and execution of a wide range of Phase II ESAs and subsurface investigations involving various drilling and sampling techniques for the collection of analytical samples to address environmental concerns/risks primarily identified during the completion of Phase I ESAs and other due diligence assessments.

Mrs. Ohlmeier has overseen remediation of contaminated sites through processes including soil vapor extraction, excavation, groundwater monitoring, and bioaugmentation.

## HOPE CLINE

### NATIONAL PRACTICE LEADER

#### PROFESSIONAL EDUCATION

M.S. Environmental Management, American Public University, Charles Town, WV, 2012  
B.S. Environmental Studies, American Public University, Charles Town, WV, 2009

#### CERTIFICATIONS/QUALIFICATIONS

- ◆ Environmental Professional (EP) in accordance with ASTM E1527-13
- ◆ AHERA Asbestos Inspector, No. AZD1146
- ◆ OSHA 40-Hour Hazardous Waste Operations Certification (29CFR 1910.120)
- ◆ Phase I Environmental Site Assessment (ESA) Experience, 14+ years
- ◆ Multifamily Phase I ESA Experience, 11+ years

#### SELECTED EXPERIENCE

Ms. Cline has more than fourteen years of consulting experience in the environmental industry throughout the United States. She has conducted Environmental Site Assessments (ESAs), National Environmental Policy Act (NEPA) compliance reports, United States Fish and Wildlife Services (USFWS) reports, and State Historic Preservation Office (SHPO) packages for a wide range of local and national clients. The properties she has evaluated have included multifamily residential, retail, office, industrial, and hospitality facilities.

#### PHASE I ESA

Ms. Cline has conducted hundreds of environmental site assessments in accordance with ASTM E1527, the USEPA All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines, HUD guidelines, and other client-specific scopes of work. She is proficient in conducting historical and municipal research, site reconnaissance, interviews, and writing technical reports. Her environmental background includes a detailed understanding of the risks associated with hazardous and regulated materials storage, use generation and disposal, above ground and underground storage tanks, polychlorinated biphenyls (PCBs), asbestos-containing materials (ACM), lead-based paint (LBP), mold, and radon.

#### NEPA GUIDANCE

Ms. Cline has completed submittal packages for the NEPA, SHPO, and USFWS for commercial, residential, and telecommunication properties. These submittal packages include a review of endangered species, wetlands, floodplains, coordination with Tribal entities, historic resource research, and numerous other criteria. Ms. Cline has also assisted with the preparation and collection of air, surface, and bulk sampling for microorganisms for private individuals, apartment facilities, and commercial/industrial properties.

## ANTHONY J. GALASSO SENIOR PROJECT MANAGER

### PROFESSIONAL EDUCATION

B.S. Environmental Studies, Richard Stockton College of New Jersey, Pomona, NJ, 1997

M.S. Environmental Science, Rutgers University, New Brunswick, NJ, 2003

### CERTIFICATIONS/QUALIFICATIONS

- ◆ AHERA Certified Asbestos Building Inspector and Management Planner
- ◆ OSHA 40-Hour Hazardous Waste Operations and Emergency Response Certification with Annual Refresher
- ◆ Substation High Voltage Awareness Training
- ◆ RCRA Hazardous Waste Management Training (RCRA Subtitle C)
- ◆ Environmental Site Assessment (ESA) Experience, 19+ years
- ◆ Freddie Mac/Fannie Mae/HUD ESA Experience, 13+ years

### SELECTED EXPERIENCE

Mr. Galasso has over 22 years of experience in project management in the environmental due diligence and remediation industry. Mr. Galasso provides environmental due diligence services for national projects throughout the continental United States. As Senior Project Manager, Mr. Galasso's role is to liaise with clients to schedule due diligence property site inspections, review Phase I ESA reports, and conduct third-party and desktop database reviews. Mr. Galasso has performed thousands of Phase I ESAs in accordance with ASTM E1527-13, Fannie Mae Delegated Underwriting Standards (DUS), Freddie Mac guidelines, and HUD guidelines.

Mr. Galasso also has experience as a U.S. EPA Asbestos Hazard Emergency Response Act (AHERA) Inspector and Management Planner in New Jersey, New York, and Pennsylvania. He has also worked on several environmental investigation and remediation projects throughout New Jersey, New York, and Pennsylvania, including underground storage tank (UST) removal, soil and groundwater investigation, and indoor air quality (IAQ) surveys.

### PROFESSIONAL ORGANIZATIONS

- ◆ ASTM International, Workgroups E50.02 and E50.04, Member

[novagroupgbc.com/carbonneutral](http://novagroupgbc.com/carbonneutral)
